FUNCTIONAL SUBSTANCES

COMBINATION OF VEGETABLE OIL

UNSAPONIFIABLES (wheat germ, olive and soybean with emollient and refatting properties, also rich in vitamin E and polyphenols with antioxidant and antiradical action) and the

LIPID FRACTION OF POLLEN: this substance stimulates the synthesis of filaggrin, a protein that is naturally found in the epidermidis cells, playing a key role in maintaining both flexibility and integrity of the stratum corneum. This

protein not only facilitates the aggregation of keratin filaments, but also generates, with its degradation, a pool of small water-soluble molecules that are essential to ensure both hydration and elasticity of the stratum corneum.

JOJOBA OIL: rich in antioxidants and very similar to the structure of human sebum produced by our body in order to protect the skin and keep it moisturized. Therefore, jojoba oil has nourishing properties and protects the skin against UV radiation.

RETINYL PALMITATE: precursor to retinol, it helps regulate skin thickness making wrinkles less deep, stimulates collagen production and improves skin firmness and elasticity.
