AMAZING
RESULTS

OILY SKIN

SIGNS OF OILY SKIN:

- **GREASY FEEL**

Excess sebum production by the sebaceous glands, causing a greasy feel

- **SHINE IN THE "T Zone"**

Constant shine on the forehead, nose and chin.

- **ENLARGED PORES**

An accumulation of excess sebum often causes pores to appear enlarged.

ACNE-PRONE SKIN

SIGNS OF ACNE-PRONE SKIN:

- **INFLAMMATION or CLOSED COMEDONES**

- **BLACKHEADS or OPEN COMEDONES**

- **IRRITATION**, extremely sensitive areas.

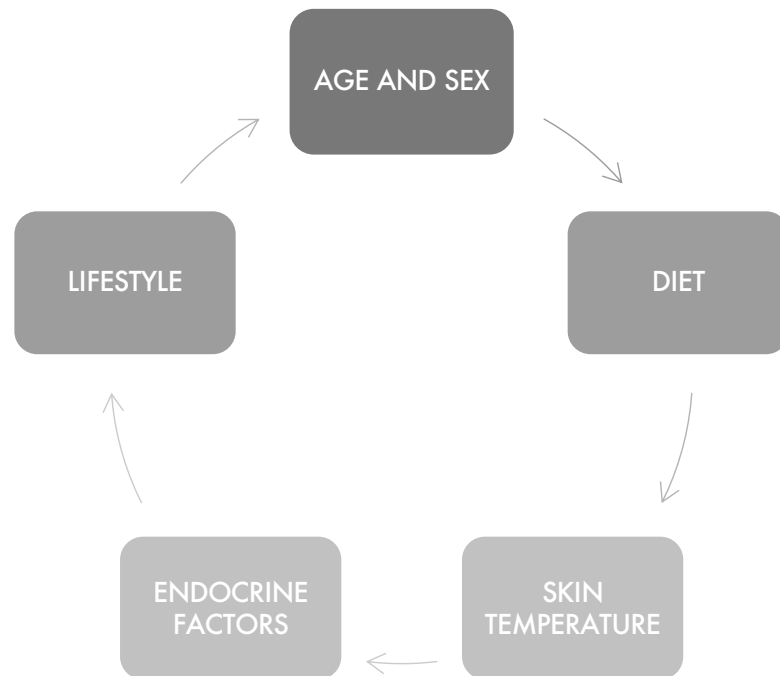

- **OUTBREAKS**

- **SPOTS or MARKS** caused by acne lesions.

FUNCTIONS OF THE SEBACEOUS GLANDS

- **Synthesize sebum:** comprised of triglycerides, squalene and fatty acids, among other components.
- **Lubricate** the skin, preventing it from drying out by reducing TEWL and thermoregulating it.
- **Protect** against germs, since the sebaceous glands secrete acids that form a part of the skin's barrier.
- **Maintain the skin's pH** between 4.5 – 6.2: a barrier against contaminants, bacteria and viruses.
- **Maintain the skin barrier**, providing key substances like antioxidants, fatty acids, antimicrobial lipids, etc.

CAUSES OF OILY SKIN

AGE AND SEX.

Greater secretion in women and during puberty.

DIET.

Greater secretion in hypercaloric diets, since hypocaloric diets are associated with a reduction in androgen synthesis.

SKIN TEMPERATURE.

Less secretion in winter, and the cold makes sebum more viscous.

ENDOCRINE FACTORS.

Hormones affect the sebaceous glands' hyperactivity. (Detailed later).

LIFESTYLE. Greater secretion due to:

- Tobacco use
- Pollution
- Lack of cleansing and/or skin care, etc.

CONSEQUENCES OF OILY SKIN

IRREGULAR MICRORELIEF

Deficient cell renewal.
Sebum accumulates in the pilosebaceous follicle.

ENLARGED PORES

Sebum hyperproduction: the walls of the pilosebaceous follicle are deformed (their diameter increases).

SHINE

Excess oil production.

BLOCKED PORES

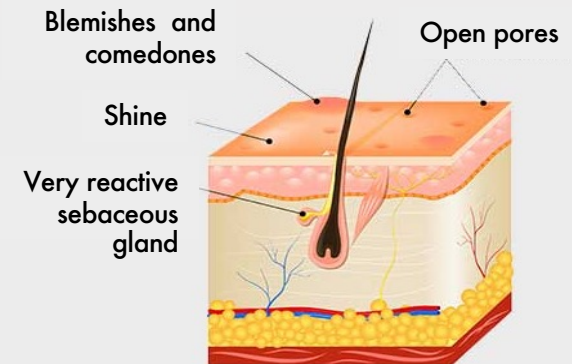

Excess sebum production: accumulation and formation of a blockage that obstructs the follicle.

REDNESS

Excess lipids: irritants.
Skin inflammation.

BLEMISHES and COMEDONES

Microbial proliferation.
Release of enzymes (proteases, lipases, etc.) that alter the cell wall: inflammatory response.

CAUSES OF ACNE-PRONE SKIN

HYPERSEBORRHEA

- Increase in testosterone and the action of 5 α -reductase.
- Dihydrotestosterone is formed. It has a specific sebaceous gland receptor, which stimulates sebum production.

HYPERKERATINIZATION

- Accelerated, abnormal proliferation of keratinocytes, leading to:
- Closed comedones: can cause inflammatory lesions.
 - Open comedones.

BACTERIAL PROLIFERATION

- An anaerobic environment is created: proliferation of *C. acnes* and *P. acnes*.
- Lipases and proteases are released, and these hydrolyze triglycerides, turning them into free fatty acids that are irritants and comedogenic, and which attract neutrophils and macrophages involved in inflammatory lesions.

CONSEQUENCES OF ACNE-PRONE SKIN

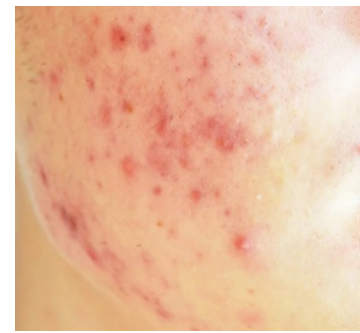

DARK SPOTS

RED SPOTS

ATROPHIC
SCARRING

HYPERTROPHIC
SPOTS

ADVICE

- Do not touch lesions.
- Use sunscreen.
- Use the right cosmetics.

WHO IS THE SHINE STOP COLLECTION SUITABLE FOR?

The treatment is suitable for those with combination, oily and/or acne-prone skin and caring for skin conditions caused by excess sebum secretion: thickened skin, enlarged pores, irregular relief, blackheads, pimples, shine, and comedones.

Unisex formula.

Recommended for all ages.

For both young and mature skin, due to its powerful sebum-regulating action as well as its complementary preventive and anti-aging action.

HOME USE

THE PROTOCOL IS 100% EFFECTIVE WHEN THE SALON TREATMENT IS USED IN
COMBINATION WITH THE HOME-USE PRODUCTS

Shine Stop

CASMARA

SHINE STOP TREATMENT

Chic & Essentials

THE PROTOCOL IS 100% EFFECTIVE WHEN THE SALON TREATMENT IS USED IN COMBINATION WITH THE HOME-USE PRODUCTS

TECHNOLOGIES:

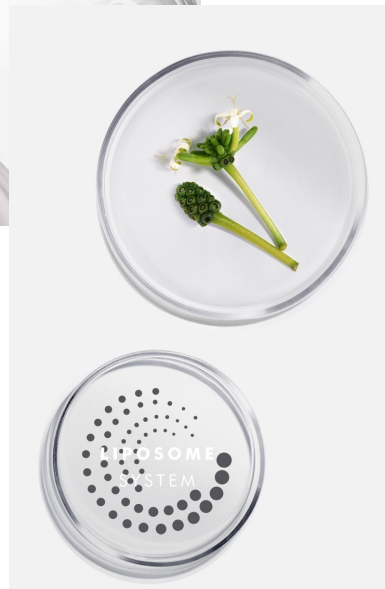

The secret to its effectiveness lies mainly in the *fusion of three technologies*:

OZONE TECH, based on ozone therapy, thanks to which active oxygen is supplied directly to the skin.

FDS TECH (Follicular Delivery System) for encapsulation in liposomes.

QUORA TECH, which blocks bacterial communication signals to reduce bacterial proliferation and sebum production.

Along with other innovative active ingredients that grant this advanced treatment a high re-balancing power, helping to correct and prevent the appearance of blemishes associated with combination, oily and/or acne-prone skin.

HOW DOES IT WORK?

- **REBALANCES THE ENTIRE COMPLEXION.**
- **TREATS, CORRECTS AND PREVENTS** blemishes in oily skin.
- **DERMOPURIFIES** intensively, balancing the skin's microbiome and pH.
- **BALANCES SEBUM** smartly, and selectively regulates oil thanks to its liposomal active ingredients.
- **HYDRATES** deeply with a 24-hour action and soothing effect.
- **MATTIFIES.**
- **PREVENTS THE APPEARANCE OF ASSOCIATED PROBLEMS:** acne, marks, dark spots, dehydration and lack of nourishment.

RESULTS

- CLEAN, BALANCED and blemish-free skin.
- MATTIFIED, shine-free skin.
- REHYDRATED SKIN.
- RENEWED SKIN with more even tone and texture.
- SKIN IS PROTECTED against problems associated with this skin type.

MAIN ACTIVE INGREDIENTS

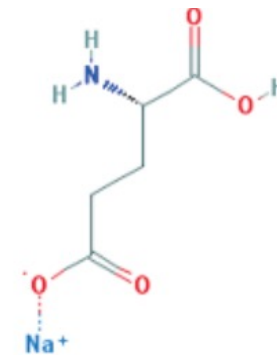

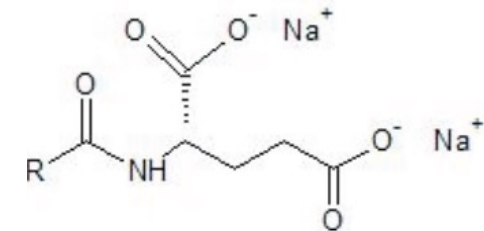

NATURAL SURFACTANT

This is an innovative surfactant comprised of a lipoamino acid:

fatty acids derived from coconut and glutamic acid.

- ✓ Extremely soft and suitable for sensitive skin.
- ✓ Forms a gentle, consistent foam.
- ✓ Respects the skin's protective barrier.

It is a gentle surfactant that, thanks to its chemical compositions, emulsifies blemishes and excess oil to ensure effective cleansing that respects the skin.

MAIN ACTIVE INGREDIENTS

POLYHYDROXY ACIDS

100% natural ingredients

Encourage flaking by weakening the bonds of the corneocytes

- Reduce the concentration of Ca^{+2} : reduce cell cohesion by activating enzymes involved in the covalent bonds.
- Reach the deepest layers of the epidermis: they increase collagen and hyaluronic acid. Redensifying action.
- Stimulate fibroblast proliferation.
- Have greater tolerance: their higher molecular weight allows for more gradual penetration.
- Increase hydration because they have more hydroxyl groups.
- Antioxidant activity, containing vitamins E and C, with an anti-aging effect, and prevent sun damage

PHASE 6

TREATMENT CREAM

MAIN ACTIVE INGREDIENTS

SHIKIMIC ACID

This is a natural active ingredient obtained from star anise (*Illicium verum*), originally from southern China and northern Vietnam.

Given its multiple benefits, it has been used traditionally for hundreds of years in various countries.

It is considered a biosynthetic precursor to alkaloids, aromatic amino acids (phenylalanine, tyrosine, tryptophan, etc.) and flavonoids.

Its different properties include:

- Treating and preventing acne.
- Antioxidant.
- Good exfoliant.

MAIN ACTIVE INGREDIENTS

OZONE TECH - OZONATED OLIVE OIL

- Ozone is a gas containing three oxygen atoms (O_3), and it is known as one of nature's strongest oxidants.
- It is stabilized in olive oil and can release active oxygen (O_2) when applied to the skin, meaning it can offer a highly effective **balancing, oxygenating and cell purifying** action. It also has antimicrobial properties.
- It can aid re-epithelialization, the microcirculation, and it improves and repairs the tissues to ensure their optimal regeneration.
- A synergistic action is established between the properties of active oxygen and those of olive oil, which also helps to provide the nourishment oily skin generally lacks.

TREATMENT CLEANSER	PEEL	OXYGENATING	TREATMENT GEL	DETOXIFYING FIRMING MASK 2020	TREATMENT CREAM

MAIN ACTIVE INGREDIENTS

OXYGENATED CORN OIL:

The softening effect of this active ingredient is owed to the competition with the pro-inflammatory lipid mediators (prostaglandins and leukotrienes) at the site of the cell receptor.

Oxygenation of the oil when applied to the skin reduces all signs of alteration associated with acne and produces an immediate feeling of comfort in the skin.

TREATMENT CLEANSER	PEEL	OXYGENATING	TREATMENT GEL	DETOXIFYING FIRMING MASK 2020	TREATMENT CREAM

MAIN ACTIVE INGREDIENTS

FDS TECH (Liposomal Zinc)

- The active ingredient, Zinc PCA, is encapsulated in state-of-the-art liposomes that allow for an innovative follicle-release technology: FOLLICULAR DELIVERY SYSTEM (FDS).
- They facilitate transportation of the active ingredient to the sebaceous gland via the main sebaceous channel that excretes in the hair follicle, the specific release target of these advanced, cutting-edge liposomes.
- It acts by transporting active ingredients (Zinc PCA) that inhibit the enzyme 5- α reductase, reducing sebum secretion.

PHASE 6

TREATMENT CREAM

MAIN ACTIVE INGREDIENTS

QUORA TECH:

The active ingredient *Morinda citrifolia* is an extremophile (it can grow in infertile, acidic and/or alkaline soils), known as Noni. It comes from southeastern Asia (Indonesia) and Australia.

Quora noni is a concentrated extract of metabolome (collection of metabolic substances) from Noni stem cells, rich in anti-quormones.

When bacteria detect there are many of them and their population reaches a minimum number or quorum, they communicate and change their behavior, becoming more like a multi-cell organism. This bacterial communication process, also known as quorum sensing, is carried out by producing and releasing self-sensing molecules (quormones) to the environment.

Shine Stop TREATMENT

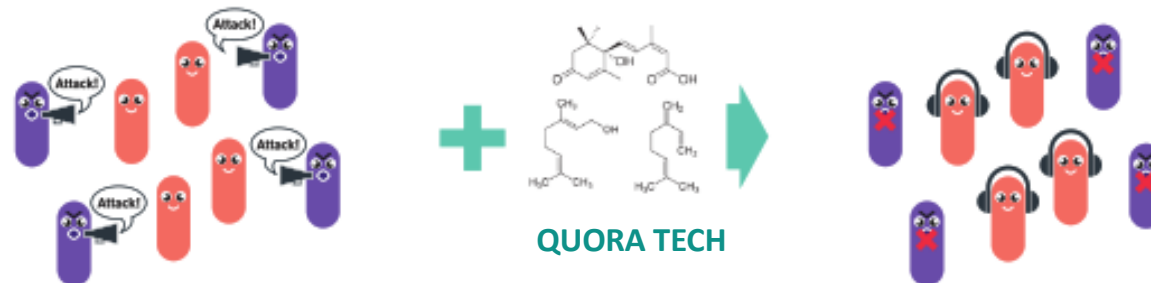

CASMARΛ

PHASE 1	PHASE 2	PHASE 3	PHASE 4	PHASE 5	PHASE 6
TREATMENT CLEANSER	PEEL	OXYGENATING	TREATMENT GEL	DETOXIFYING FIRMING MASK 2020	TREATMENT CREAM

QUORA TECH

The other bacteria have receptors that can detect these signal molecules. The higher the number of bacteria in the population, the larger the number of molecules that the bacteria will perceive. When the threshold level (quorum) is reached, the entire population simultaneously changes its gene expression and carries out a coordinated action.

It blocks the microbial communication signals to prevent the formation of biofilms and the development of virulence. It is bacteriostatic, meaning it maintains the microbial balance.

TREATMENT CREAM

MAIN ACTIVE INGREDIENTS

PORE-MINIMIZER

From the fungus *Fomes officinalis*, (native to the old conifer forests of North America and Europe), also known as agarikon, given its agaric acid content, which has age-old astringent, tightening and moisturizing properties.

The skin's cells are constantly renewing themselves within the follicle, where the sebaceous glands that produce sebum (a mix of oil, proteins, cholesterol and inorganic salts) are found.

FIRMING MASK
2020

PHASE 6

TREATMENT CREAM

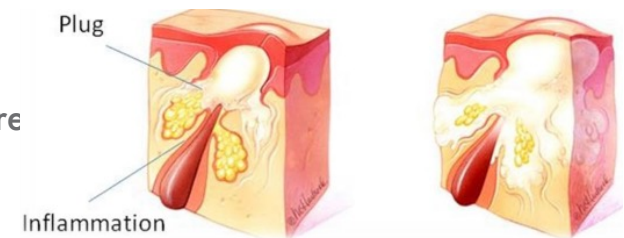

MAIN ACTIVE INGREDIENTS

PORE-MINIMIZER

Excess oil, stress, tobacco use, environmental pollution, and more contribute to the expansion and deformation of the skin's pores.

When the pores become blocked, they accumulate oil and dead skin cells inside the follicle, encouraging bacteria that cause inflammation to proliferate.

- ✓ Reduces pore size and is a natural astringent.
- ✓ Its active ingredient (agaric acid) reduces excessive secretion, thus smoothing, tightening, and moisturizing the skin.
- ✓ Produces an immediate tightening effect.
- ✓ Minimizes the visible appearance of skin that suffers from excess sebum secretion.
- ✓ Provides a fresh, moisturized feel: more flexible skin.

PHASE 6

TREATMENT CREAM

MAIN ACTIVE INGREDIENTS

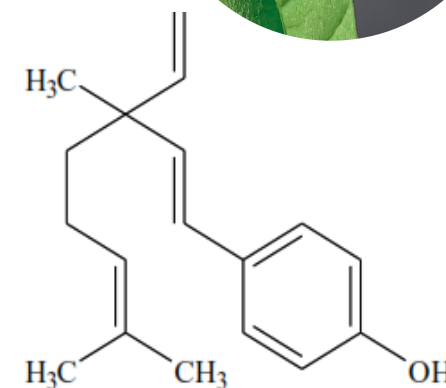

RETINOL-V: BAKUCHIOL

Natural equivalent to retinol for acne-prone skin.
Helps to maintain the integrity of the lipids in the skin.

Free fatty acids and squalene are the main lipids in the skin's sebum. Both are prone to peroxidation and photodegradation, phenomena related to the increase in inflammation caused by acne, even in the absence of *P. acnes*.

Bakuchiol has a wide spectrum of antioxidant action that helps to maintain homeostasis of the lipids, thereby alleviating the problems experienced by acne-prone skin.

In addition, it has a powerful regenerating and anti-aging action, improving the skin's firmness and offering high skin tolerance.

HYDRO *Sebum-Regulating Gel-Cream*

WHAT IS IT?

Sebum-regulating, hydrating gel-cream that mattifies the skin for a shine-free finish.

Its comprehensive formula combines two innovative technologies: QUORA TECH and FDS TECH (Liposomal Zinc) for fully balanced skin that's free from blemishes.

Thanks to the active ingredients Pore-Minimizer and HYDRA+ in its formula, it offers a 24-hour moisturizing action, correcting and preventing blemishes.

Its silky texture provides an unbeatable finish for moisturized, mattified, shine-free and blemish-free skin, keeping it lovely and healthy.

MAIN ACTIVE INGREDIENTS:

- FDS TECH (Liposomal Zinc)
- QUORA TECH
- HYDRA+
- PORE-MINIMIZER

WHO IS IT SUITABLE FOR?

Specially recommended for combination, oily and/or acne-prone skin in need of hydrating care that keeps skin matte and free from blemishes.

APPLICATION METHOD

Apply morning and night to your clean face and neck until fully absorbed.

ANTI-AGING *Sebum-Regulating Cream*

WHAT IS IT?

Sebum-regulating anti-aging cream that mattifies and rejuvenates the skin.

Its comprehensive formula combines two innovative technologies: QUORA TECH and FDS TECH (Liposomal Zinc) for fully balanced skin that's free from blemishes.

The Retinol-V, Pore-Minimizer and hyaluronic acid in the formula lend it hydrating and anti-aging properties that help rejuvenate the skin and offer an overall improvement in its microrelief.

Its lightweight texture provides an unbeatable finish for young, matte, shine-free and blemish-free skin.

MAIN ACTIVE INGREDIENTS:

- FDS TECH (Liposomal Zinc)
- QUORA TECH
- RETINOL-V
- HYALURONIC ACID
- PORE-MINIMIZER

WHO IS IT SUITABLE FOR?

Specially recommended for combination, oily and/or acne-prone skin in need of an anti-aging care that keeps skin matte and free from blemishes.

APPLICATION METHOD

Apply morning and night to your clean face and neck until fully absorbed.

SEBUM-CONTROL *Anti-Blemish Gel*

WHAT IS IT?

A gel with balancing and astringent properties for all skin types with localized blemishes.

Its innovative formula featuring Azeloglycine and B-Peptide regulates sebum secretion and helps get rid of blemishes faster.

MAIN ACTIVE INGREDIENTS:

- AZELOGLYCINE
- B-PEPTIDE

WHO IS IT SUITABLE FOR?

Recommended for all skin types, especially combination, oily and/or acne-prone skin with localized blemishes. Particularly useful for post-acne skin and men prone to folliculitis after shaving. Unisex formula.

APPLICATION METHOD

Apply to the blemish to be treated, massage in and leave to work. Apply as many times as necessary until the blemish disappears.

SEBUM-CONTROL *Anti-Blemish Cleanser*

WHAT IS IT?

Sebum-regulating foam cleanser that deeply yet gently cleanses the skin.

An innovative cleansing foam formulated with niacinamide (vitamin B3) and azeloglycine that rids the skin of impurities.

Its creamy foam with softening properties leaves skin feeling comfortable and fresh, with a matte, shine-free finish.

MAIN ACTIVE INGREDIENTS:

- AZELOGLYCINE
- NIACINAMIDE
- NATURAL SURFACTANT

WHO IS IT SUITABLE FOR?

Specially recommended for combination, oily and/or acne-prone skin in need of an anti-blemish cleanser that strengthens the skin barrier and restores softness. Unisex formula.

APPLICATION METHOD

Apply morning and night to damp skin. Massage in using circular motions then rinse with plenty of water, avoiding contact with the eyes.

SHAKE BEFORE USE.

NEW FEATURES compared with the old Shine Stop

- ✓ Better proven efficacy in active ingredients and technologies.
- ✓ High percentage of natural ingredients: 95%.
- ✓ Innovative technologies with synergistic action:
 - OZONE TECH
 - FDS TECH
 - QUORA TECH
- ✓ Innovative, lighter textures that are fast-absorbing and have a silky feel.
- ✓ Improved user experience in terms of convenience in their care routine at home.
- ✓ Covers a new care need associated with acne-prone skin.

COMPETITIVE ADVANTAGES

- **MAXIMUM EFFICACY, WITH A FULL, COMPREHENSIVE ACTION**

Treatment that addresses the issues associated with excess sebum, whatever its cause. Mechanism of action focused on restoring the microbial balance and reversing blemishes and the signs of oily skin.

- **HIGH VERSATILITY**

Treatment developed to care for combination, oily and/or acne-prone skin of any age. Can be used at any time of year (including summer).

- **EXCLUSIVE SINGLE-DOSE TREATMENT**

Comprehensive action thanks to the synergy of six single-dose phases: 5 phases + 1 algae peel-off mask.

- **ADAPTED COSMETICS**

Adapted sensoriality: people with oily or acne-prone skin are quite selective with the textures they apply to their skin given the sensations they cause. They like lightweight, refreshing textures and reject all feelings of stickiness or excessive nourishment as they associate this with excess oil.

- **EFFECTIVE AND RESPECTFUL OF THE SKIN**

Effective treatment that respects the skin. High tolerance. Non-irritant. Phase 1 of comfortable cleansing with soft, natural surfactants, and phase 2 peel with MULTI-ACID COMPLEX that does not irritate the skin.

- **PREVENTIVE, ANTI-AGING ACTION**

Containing active ingredients with renowned anti-aging efficacy.

- **EXCELLENT VALUE FOR MONEY**

Excellent value for money, this treatment offers customers highly efficient sebum-regulating care at an affordable price, promoting its high turnover as a leading treatment in beauty centers.
