### FUNCTIONAL SUBSTANCES

**VITAMIN C:** also known as ascorbic acid, it is a water-soluble vitamin and a powerful antioxidant which is able to counteract the effects of skin aging thanks also to its photoprotective properties. With its whitening action, it inhibits tyrosine synthesis, which is a

precursor to melanin. It has anti-inflammatory properties especially in case of erythema due to excessive sun exposure. Vitamin C keeps the optimal collagen density in the dermis. Some biochemical studies have shown that vitamin C acts as co-factor for lysine and prolyl hydroxylase, two enzymes which are essential for collagen biosynthesis.
