

How to take Sail plan pictures.

JIB

1. From the center bottom of the jib looking up. Put the camera as low to the deck as you can. The goal is to get all the draft stripes (the blue lines that run horizontal across the sail) in the photo.
2. From behind the jib looking forward. Bottom of the picture should show jib lead position and then capturing as much up the sail you can.

How to take Sail plan pictures.

Main

Take pictures from the center of the foot laying down as low in the boat as you can. Rotate the camera slightly to enable the bottom draft stripe to go from the top left corner to the bottom right corner. This will help get all the bottom draft stripe in the picture.
