

Service Request Form

Faster, Easier, Safer applies to services as well as new products. We know how frustrating it can be to be waiting for your tools when there is work to be done. That is why our repair and calibration processes are designed to speed your instruments through our laboratory and back to you as quickly as possible. You can help avoid delay by completing this form and including it in your shipment. Also, shipping is faster and less costly if you only send the modules in need of repair or calibration, without the carrying case or accessories.
