

POCKET TISSUE HOLDER (with Curved Opening)

Cut one piece of fabric $11 \frac{1}{4} \times 6 \frac{1}{4}$ – this will be the inside of tissue holder.

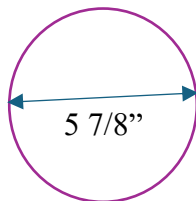

Cut two pieces of fabric $6 \frac{1}{4} \times 5 \frac{7}{8}$ – these will be the curved top pieces; looks good in coordinating fabrics

Sew the two smaller pieces, right sides together, along the longer side (the $6 \frac{1}{4}$ ” side) using $\frac{1}{4}$ ” seam. Press.

Draw a line on the back of each of the smaller pieces $1 \frac{3}{4}$ ” in on both ends.

Use a bowl or plate that is $5 \frac{7}{8}$ ” in diameter (across) to mark on each side, as pictured below (or use attached template.) There should be about $\frac{3}{8}$ ” on each side that is unmarked.

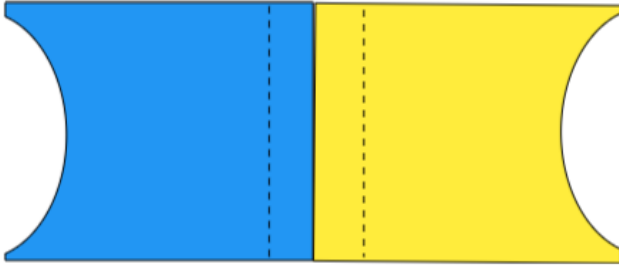

Layer this piece with $11 \frac{1}{4} \times 6 \frac{1}{4}$ piece (they are now the same size), right sides together and sew on curved lines. (Use smaller stitch length for curves)

Trim about $\frac{3}{8}$ ” in from where you sewed (seam allowance); notch curves with scissors. **DO NOT CLIP CORNERS!**

Turn right side out and press.

Stitch down center in 2 parallel lines about 3/8" from each side of seam. This should be in matching thread.

Fold over as shown below with 11 1/4 x 6 1/4" (lining) piece on the outside and stitch together with 3/8" seam. (Flaps go under each other as shown below.)

Clip corners and turn right side out. Press. (Pink or serge the inside edges to prevent fraying.)

Insert tissue packet.
