

Based in Stockholm, Sweden, Twiceme Technology is a pioneer in smart safety solutions for professional environments. Its technology is seamlessly embedded into personal protective equipment from world-leading brands, providing workers and safety personnel with instant access to critical on-site information via the Twiceme mobile app or the connected Safety Management Portal (SMP). This enables faster emergency response, more effective communication, and enhanced information sharing across job sites.

The Digital Safety Standard for Jobsites.

How it works

- Download the Twiceme app
- Create an account to access Work Documents, Certified Inspections, Immobility Alert and other features seamlessly connected to your gear.
- Join a Workspace
- Create your Medical ID
- Register your equipment
- Upload Information by pressing the upload button. Hold phone over the Twiceme symbol on the equipment and transfer or read info.
- Access Information anytime by pressing “Scan” in the app and tapping your phone on the equipment.

NFC technology

Near Field Communication (NFC) is the same secure technology used for contactless payments. It can only be read when your smartphone is held within a few centimeters of the Twiceme symbol on the equipment. Your emergency and medical information is never stored in the cloud, reducing the risk of hacking or data leaks. You remain in full control, choosing to share as little or as much information as you’re comfortable with on your profile.

App features for the workers

MEDICAL ID

Medical ID - to make vital medical info accessible when it matters

EMERGENCY SERVICES

Emergency Services - send an SOS alert to your team or to the national emergency services.

ROUTINE INSPECTION

Routine Inspections - Regularly evaluate the health of your PPE.

WORK DOCUMENTS

Work Documents - Store your training certificates and other work-related documents seamlessly on your equipment.

SHARE LOCATION & GET BACK TIMER

Share Location & Get Back Timer - access a seamless way to notify your team of your live position or if you’re not back in time.

IMMOBILITY ALERT

Immobility Alert - detects prolonged immobility, triggering a response if the user stays unresponsive.

Twiceme enhanced equipment

Twiceme integrates seamlessly across a wide range of products, enabling instant access to essential information wherever it’s needed. We integrate digital hardware into world-leading brands’ PPE, including helmets, vests, harnesses, Self-Retracting Lifelines (SRL) and workwear. Alongside that, we streamline the full safety workflow, managing work documents, inspections, and compliance records in one connected digital ecosystem.

App Download

Safety Management Portal (SMP)

Twiceme award-winning Safety Management Portal (SMP) enables safety managers to streamline compliance, track Personal Protective Equipment (PPE), track medical ID uploads, inspections, certifications and training records in one intuitive, connected platform. Twiceme turns the PPE your workers already wear into live compliance records. Certifications, inspections, and emergency info, accessible with a phone tap.

Streamline safety and compliance

Gain real-time visibility into how Twiceme is being used across your job sites to help ensure safety standards are met and maintained.

Users are informed when:

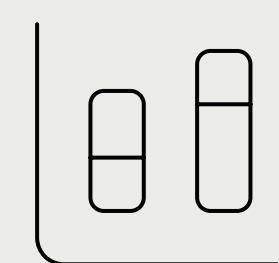

- A certified inspection is completed and the documents are stored in one central location
- A work document is approaching its expiration date
- A worker has not uploaded their medical ID to their equipment
- When equipment or gear fail a routine inspection

SMP benefits

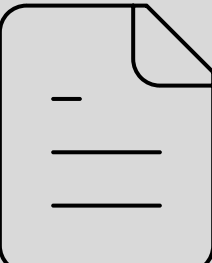

EQUIPMENT LIFETIME TRACKING

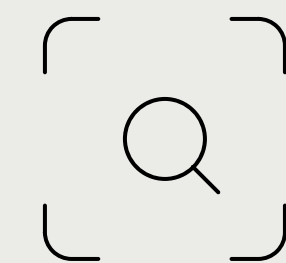

Every Twiceme-enabled helmet, harness, and piece of PPE has its own digital record: first use, inspection history, service life, assignee.

WORK & SHARED DOCUMENTS

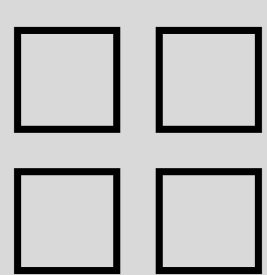

Assign certifications to workers or job roles. SMP tracks every expiration and surfaces gaps before audit findings. Share SDS information, SOP's, and policies with a team or your whole workforce.

OBSERVATIONS: BETA

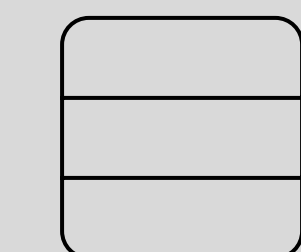

Observations gives anyone on your crew the ability to flag a hazard, a near-miss, or an unsafe behavior in seconds without paperwork.

COMPLIANCE DASHBOARD

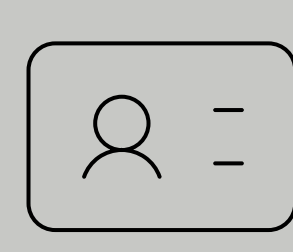

Every module at a glance on one screen: documents status, medical IDs uploaded across your equipment; inspection pass rate counts; workers who meet their role requirements and who is missing one; members added and connected. Click any card to jump straight into that module.

CERTIFICATE COMPLIANCE MATRIX

A live grid of every member by every requirement. Green where they're covered. Red where they're not. Click any cell to see the document, upload a new one, or send a reminder. The view your auditor is going to ask for - except you already have it open.

MEDICAL IDS

Stored on the worker's own Twiceme-enabled PPE. Any phone can tap and read it on the spot, without needing an app or a login.

CERTIFIED & ROUTINE INSPECTIONS

Each tap pulls up the right form, captures the inspector, timestamps it and files it against the serial number. Per-category intervals inline with OSHA's SHIB 3-6-2024.

New in SMP

- Roles & requirements. A live read on who is covered.
- Training-matrix import. Bring your CSV or XLSX in.
- Inspection reminders. Push and email, automatic.
- New templates. NFPA 1850, PAPR and SRL forms.
- Integrations: BambooHR, Procore, Drive, OneDrive.
- Foreman role. Access scoped to one crew.
- Magic-link sign-in. No passwords to reset.
- Worker import. One spreadsheet, whole crew.
- Retrofit NFC tags. Tag any asset. Beta.

Ladders, fire extinguishers and other site equipment beyond PPE — more brands, more categories.

Proof it Works: Direct Customer Testimonies

Life-Saving Moments

Safety Director & CIO | North Carolina

"We did have an employee that had a medical issue. We scanned the Twiceme helmet and brought up the emergency contact -- and our folks used it. This is one of those things where you don't need it until you need it. When you need it, by God, it better work."

Real on-site medical incident. Construction company now equipping 725-750 employees, scaling to 1,000+

Safety Team | Virginia

"A subcontractor was crushed by a machine on our site last Friday. Having emergency contact info instantly accessible on the helmet would have made a critical difference in those first minutes."

Construction company has deployed Twiceme for 3 years across all field hard hats | 460 employees

Fire Chief | Indiana

"We're actively using the lone worker and medical ID features across our crew. The Twiceme device even survived being run over by a fire apparatus. Yesterday's structure fire was exactly the scenario where the location sharing feature would have been critical."

Department has deployed Twiceme-enabled Bullard helmets across all personnel. Planning formal injury simulation drills.

Saves Time

Safety Director | North Carolina

"If I'm a superintendent and I get six new people sent to me, I can just walk around with my phone, scan their helmet, and immediately see: five need fall protection training, none can run a forklift. That would be really helpful."

Describing the value of instant field certification access. Viewpoint integration in progress.

HR & Safety Team | North Carolina

"The Bulk Assign feature is a big win. Giving someone a Sharpie to write their info on a sticker is an easier barrier to entry than explaining an app download in new-hire orientation every single week."

HR Team caught on quickly to bulk assignment. Rolling out to 100% of workforce.

Safety Director (30yrs experience) | Illinois

"Think of the helmet as a resume -- scan it and it shows your training credentials. That's how I explain it to our workforce."

Construction company completed a year-long helmet evaluation before committing. Transitioning - 100 field workers

Saves Money & Streamlines Operations

Safety Manager | North Carolina

"We're paying hundreds of thousands across Procore and supplemental platforms. My job is to consolidate. The Twiceme-Procore integration is exactly the kind of native solution we need - no separate login, no extra platform."

This company is actively consolidating safety platforms. Twiceme's Procore integration positioned as a cost-reduction tool.

President | Oregon - serves top 500 US construction companies

"I love the product. I see it as a door opener and customer retention tool -- hard hats lead to safety vests, fall protection, package deals. It's how we differentiate from the competition."

This distributor has customers buying 5,000+ helmets annually. Views Twiceme as a competitive differentiator.

Fall Protection Manager | Ohio

"Managing fall protection inspections for dozens of pieces of equipment manually is extremely time consuming. Twiceme digital inspection tracking would transform how we handle compliance."

Identified as a key use case for expanding Twiceme beyond helmets to harnesses and confined space equipment.

Safety Manager | Louisiana (4,000+ employees)

"We've rolled out Twiceme across 2,000 hard hats and are scaling to 5,000. The bulk deployment capability made that possible. Workers use it for emergency contacts and linked training records."

Construction company has used NFC-linked training records via their internal system for years - a unique Twiceme implementation.

Safety Manager | New York

"I want to beta test the bulk assignment feature for our full 150-person workforce. The immobility alert and lone worker feature are especially relevant to what we do."

Construction company operates asphalt and construction materials sites with significant lone worker exposure.
