

HAIR BOTOX

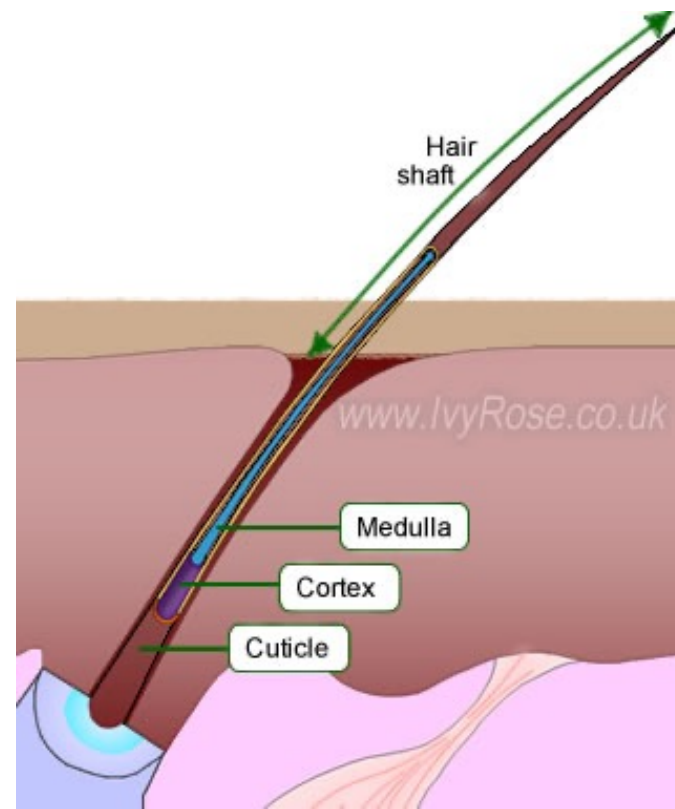

The Miracle Worker For Every Hair

Hair Botox Definition -

Hair Botox is a deep conditioning hair treatment designed to repair the damaged and broken hair fibers, using ingredients such as **caviar oil, antioxidants, vitamin B5, vitamin E, and collagen complex.**

INTRODUCTION-

- Hair Botox Treatment reverses the damage to the hair cortex (Cortex is the middle layer of the hair shaft which provides the strength, colour and texture of a hair fibre) and hair cuticles (the outer layer of the hair shaft, it is thin and colourless. It serves as protection to the cortex.) while straightening, hydrating, and bringing your hair back to life.

- It contains no Botulinum Toxin and is applied on the hair to work as a magic similar to a [Keratin treatment](#), where it penetrates the cuticles and fills in the gaps and breakages. It easily mends tears in the hair follicles, creating sleeker, shinier, and tougher strands.
- Hair botox is a **non-chemical conditioning treatment** that infuses your hair with **ceramides** (Ceramides are a family of waxy lipid molecules, lipids are an organic molecule this is oily & waxy) derived from **Meadowfoam** (Meadowfoam is a seed oil, extracted from the seeds of a flower named **Limnanthes alb**) providing a protective barrier for all hair types. Meaning it will reduce frizziness and repair any damage to your hair. It is an excellent option for both men and women if you are looking for a treatment that does not involve any harsh chemicals.

What is HAIR BOTOX ?

Hair Botox is a **deep conditioning Treatment with Filler Therapy** that contains a protein-rich formula that fixes the imperfections in each individual strand of hair. This mixture of **Proteins, caviar oil, collagen, vitamins, antioxidants, natural acids, and healing agents** promises to moisturize, nourish, and restore hair from inside out. These ingredients will make your hair softer, frizz-free, and less prone to damage & also make the hair semi-permanently straight.

Ingredients in details - Vitamins B5, Vitamin E, Amino Acid, Glyoxylic Acid, Collagen Complex, BONT-L Peptide, lipids. They are combined with many other conditioning agents & more.

What does Filler Therapy mean?

- In Hair Botox Treatment, we used useful protein complex like collagen complex that is used to fill the damaged gaps between the hairs that result in split ends & frizziness, which after the therapy heals the hairs from within and brings it back to life with more glow & lustre, that's why it's called filler therapy.

What Is Collagen Complex?

Collagen Complex or Collagen is a natural protein that is very important for humans & is found in our human body naturally. Collagen mainly helps in **giving the skin strength and elasticity & is the soul reason for healthy strong , bouncy hairs with a strong nourished fresh scalp.**

DIFFERENCE of Hair Botox & Conditioning Treatment-

HAIR BOTOX

- It's a deep conditioning Treatment
- It keeps hair straight for 3-4 months with also giving strength to the hairs
- Permanent Hair Straightening

CONDITIONING TREATMENT

- It's Just conditioning or Hair spa Treatment
- The hair stays straight for a very short period of time and doesn't heals any damaged hair
- Semi-Permanent Hair Straightening

Why is Hair Botox Good ?

- It is firstly Chemical Free and helps the hair retain it's texture & health in a very Subtle & natural way.
- It's 100% Environmental Friendly
- The Results are immediate & no need for waiting!
- It Keeps Hair Straight for as long as 3-4 months although it may vary from person to person.
- It keeps hair in perfect form and shields it from any harmful chemicals while having the hairs coloured (Olaplex is also recommended to be used with hair botox for better results and also to ensure the healthiness of the hair to last for long time)
- Hair Botox contains acidic compounds that are safe for your hair and body. There are no harmful chemicals such as formaldehyde that are common in traditional Keratin Treatments.
- This newly popular conditioning mask won't hurt your hair in any way. Instead, this treatment will give you healthy and beautiful hair for a long time. Botox for hair also protects against dandruff and other scalp conditions and helps reduce hair loss.
- Hair Botox is the first ever treatment proven by experts and recommended by professionals that has taken up the frontline in the industry and has miraculously changes hairs of many for good, so, it's good because people know it is Good!!

What Is Formaldehyde?

- Keratin treatments typically contain a chemical called **formaldehyde**. The American Cancer Society warns that formaldehyde is a known carcinogen (A dangerous substance that causes cancer in humans). This means that it may cause cancer or help cancer to grow. Products with this chemical release formaldehyde gas into the air.

Who are eligible for Botox?

Hair Botox works on all types of hair! Straight hair, curly hair, & any type in between will benefit from this treatment. Everyone deserves manageable hair, and this protein-packed Natural formula delivers noticeable results.

Here are a few of the possible reasons why you may need to do Hair Botox:

- Your once-lovely locks appear dehydrated and frizzy.
- Your hair looks dull and lifeless.
- White flakes of dead skin appear on your scalp and hair.
- Your hair has recently been bleached, colored, or highlighted.
- Your hair tips are prone to splitting.
- Your hair is badly damaged by frequent heat styling.

The Procedure -

- First, the hair professional will wash your hair with a clarifying shampoo, to eliminate build-up and open hair cuticles. After sectioning the hair, the stylist will apply the product to the hair and scalp and leave it for approximately 45 minutes.
- Once the product is fully absorbed, your hair is washed with a sulfate-free shampoo and blow-dried carefully to avoid any breakage.
- The stylist then uses a flat iron to seal the treatment into your hair, which results in silky, shiny, and easy-to-style locks.

What is Sulphate Free or Low Sulphate Shampoo & why is It used?

Sulfates help a shampoo to strip oil and dirt away from the hair. **Sulfates may strip away too much moisture, leaving the hair dry and unhealthy.** They may also make the scalp dry and prone to irritation. Aside from the possible drying effects, there is little risk to a person's health from using sulfates correctly.

Low-Sulphate Shampoos or Sulfate-free shampoos help retain the natural moisture of the hair so that your hair does not lose its natural shine and softness. If you have colored hair, sulfate-free shampoos are a blessing. Unlike their counterparts, these are gentle on the hair and won't strip your hair of, that's why it's used so that it doesn't further damage the hair, rendering hair botox treatment useless.

HAIR BOTOX VS KERATIN

HAIR BOTOX

- Hair Botox does not contain any chemicals. It is a type of deep-conditioning treatment that will help your hair feel smoother and more hydrated. It will not straighten your hair like a keratin treatment would. However, it will be easier to style and maintain your look.
- Hair Botox works well with every type of hair. Those with thinner, finer hair would be more suited to using a hair Botox treatment over keratin as it will weigh down the hair.

KERATIN

- A keratin treatment (also known by most as a Brazilian Blowout) is a chemical treatment that acts as a chemical straightening and smoothing agent for your hair. Many keratin treatments contain the chemical formaldehyde, which can be quite irritating to those with sensitive scalps.
- Keratin treatments work best with those that have very thick curly hair that is prone to frizz. Getting a keratin treatment can help make everyday styling easier and more manageable.

OVERVIEW -

- **Hair Botox Definition** - Hair botox is a deep conditioning hair treatment designed to repair the damaged and broken hair fibers, using ingredients such as **caviar oil, antioxidants, vitamin B5, vitamin E, and collagen complex**.
- **TREATMENT NAME:** A deep-conditioning hair treatment with filler therapy (The Filler used is called **Collagen Complex**)
- **MAIN BENEFITS:** Repairs damaged hair, adds moisture and shine, softens, and smoothness hair and keep it straight for 3-4 months.
- **WHO SHOULD USE IT:** In general, hair botox is considered safe to use for any hair type but is highly recommended for frizzy, damaged and unmanageable hairs.
- **HOW OFTEN CAN YOU USE IT:** Hair botox deep conditioning treatment can last three to four months & can be done again after that time period.
- **DON'T USE WITH:** Because hair Botox is a Non-Reactive concentrated Formula of different oils & that contains many ingredients rather than a single ingredient, there's nothing in particular & can be used with any other treatment but is mostly recommended with OLAPLEX for better results and to ensure long lasting healthy hairs.
- **Is it Chemical Free?** – Yes
- **Why is it called “Hair Botox”?** – Although it doesn’t contain Botulinum Toxin, it is called Botox because the procedure works similarly as Botox, where the healthy ingredients reach into the hair and nourishes from inside but not via injection but via steam or heat.

- **Is Hair Botox better than Keratin?** - Hair Botox works well with every type of hair. Those with thinner, finer hair would be more suited to using a hair Botox treatment over keratin as it will weigh down the hair. In comparison both are Good treatments
- **Why not keratin?** - Keratin treatments work best with those that have very thick curly hair that is prone to frizz. But damaged hair cannot be treated with keratin so Hair botox is the only best option for them.
- **Which is best?** – Hair Botox for hair repair and straightening for 3-4 months. Keratin for thick curly or frizzy hairs but not for damaged, weak hairs and straightens hair for more than 5 months making it easy to manage.
- **What is the best combination with Hair Botox? – Hair Botox + OLAPLEX.** While Hair Botox repairs and brings back life to the hairs while rejuvenating it from inside making it straight and manageable, OLAPLEX forms an impenetrable protective shield on the hairs making it more hard for harmful chemicals to again re-enter inside hair tissue fibers and damage it, thus making the hair secure and more strong from inside out! While you color your hair without any worries!!
