

# Colour and Magick

You can really amplify the power of your spells, rituals, and visualizations by incorporating colors that align with the energy you're working with. Each color carries its own unique vibration, so when you choose shades that correspond to your specific goal—whether it's love, protection, healing, or abundance—it adds an extra layer of focus and intention. For example, using green for prosperity or pink for love can help channel those energies more effectively. By being mindful of color, you're tapping into a deeper level of magic that enhances the overall success of your practice.

## **WHITE**

*If you are unsure about which colour you need, use white.*

# BLACK

Almost no colour, it absorbs light. Unlike other colours, black reflects very little, if any, light back to the viewer. This can give the false impression that black is the absence of colour. It is actually the absence of colour reflection. Think of this colour as a black hole in space. It absorbs all light with little or no reflection back, thus it becomes a receptacle or a transporter for all that you do not need or want. Properly used, it can be one of the most useful and powerful colors available. However, misused, it can cause disaster.
