

# Stone Bat Co.

**"Stone Bats, Hard as a Rock"**

The process of making a Stone Bat is simple. First you start with an unfilled wood billet. All billets are made from pro grade wood.

Next, the billet will make its way to the lathe. On the lathe, Stone has to file the bat to the desired model and size of the customer.

Finally the bat is ready to be finished. The paint job requested by the customer will be applied. Lastly, Stone puts his finishing touches on the bat to make them "hard as a rock."
