

WHY you
should pick a
decorator who
uses a dustless
sanding system

Why?

It's 2024 and there has never been a more significant time to invest in decorators who use dustless sanding systems. By prioritising the health and well-being of both our decorators and clients, we have fully equipped our team with high quality dustless sanders.

Asthma and respiratory illnesses are sadly on the rise, and it is crucial to prioritise health and safety in our living and work spaces. Dustless sanding plays a vital role in minimising dust, especially the hazardous PM2.5 particles that can be deeply inhaled into the lungs.

Opting for a decorator who uses dustless sanding systems not only enhances the aesthetics of your home and reduces mess but also safeguards the health of your family.

Benefits for Clients

- Prioritising client health and safety is crucial, especially when considering the impact of decorator's dust. Dustless sanding significantly reduces health risks such as respiratory issues and allergies.
- Dust particles and irritants pose a higher risk to children and vulnerable individuals, making it imperative to minimise exposure with a dust-free system.
- A cost-effective solution as it reduces cleanup time, leading to fewer labour hours spent on prepping and post-sanding cleaning tasks.
- The decoration process becomes more enjoyable without compromising anyone's well-being.
- Dustless sanding ensures a cleaner surface for decorating, resulting in a refined and high quality finish.

Benefits for Decorators

- Decorators are at a high risk of inhaling harmful dust particles, which can lead to long-term health issues. Dustless sanding significantly reduces this risk.
- Reduced physical strain on the body, resulting in less bending and wear and tear.
- Clean-up is more manageable as fine dust does not spread to multiple areas.
- Enhanced client satisfaction.
- Dustless sanding reduces dust production during the sanding process, promoting a cleaner and healthier indoor environment.
- Inhaling fine dust particles like PM2.5 can have severe health implications.

By choosing a decorator who values dustless sanding, you are not only enhancing the beauty of your home but also prioritising your family's well-being and that of your decorator and the environment.

**Our team uses Mirka dustless sanding models which are 99.97% effective
at removing particles smaller than 0.3µm in size.**

“
I am thrilled to have discovered a dust-free
painter, especially with a child who suffers
from severe asthma. This brought me peace of
mind during essential home renovations.
Thank you!
”
