only for a brief period

Australian Made
and used across four continents!

PROBLEM: One of the major complaints in Aged care facilities are the unpleasant odours caused by many varying issues.

SOLUTION: OXIRA Air Neutraliser that uses natural methods to freshen up the air.

Introducing the OXIRA XN, as natural as a Lightning Storm!

At a certain frequency, UV is a very effective germicide and air neutraliser.

This occurs in mother-nature in the form of sunlight and thunderstorms.

Micro-organisms such as viruses, bacteria, yeasts and fungi are destroyed in seconds with UV irradiation. Not only can these viruses be deadly they can cause very bad odours especially in wound care treatment etc.

It's Compact. It's Safe. It's Quiet.

OXIRA units are designed very specifically for these very exacting environments.

Why not take advantage of our expertise and relentless obsession with quality?

And, it's Australian made!

Suitable for Aged Care and HealthCare in:

Wound Care dressing and changing areas,

Garbage Rooms, Linen & Laundry,

Patient and Residents rooms where ODOURS are present.
