

# Multi Cloud

Kupboard allow you to manage clusters in a variety ways. You can create the same cluster on multiple cloud providers, or you can create one cluster across multiple clouds. For commands for cluster management, check out [Cluster Management](#)

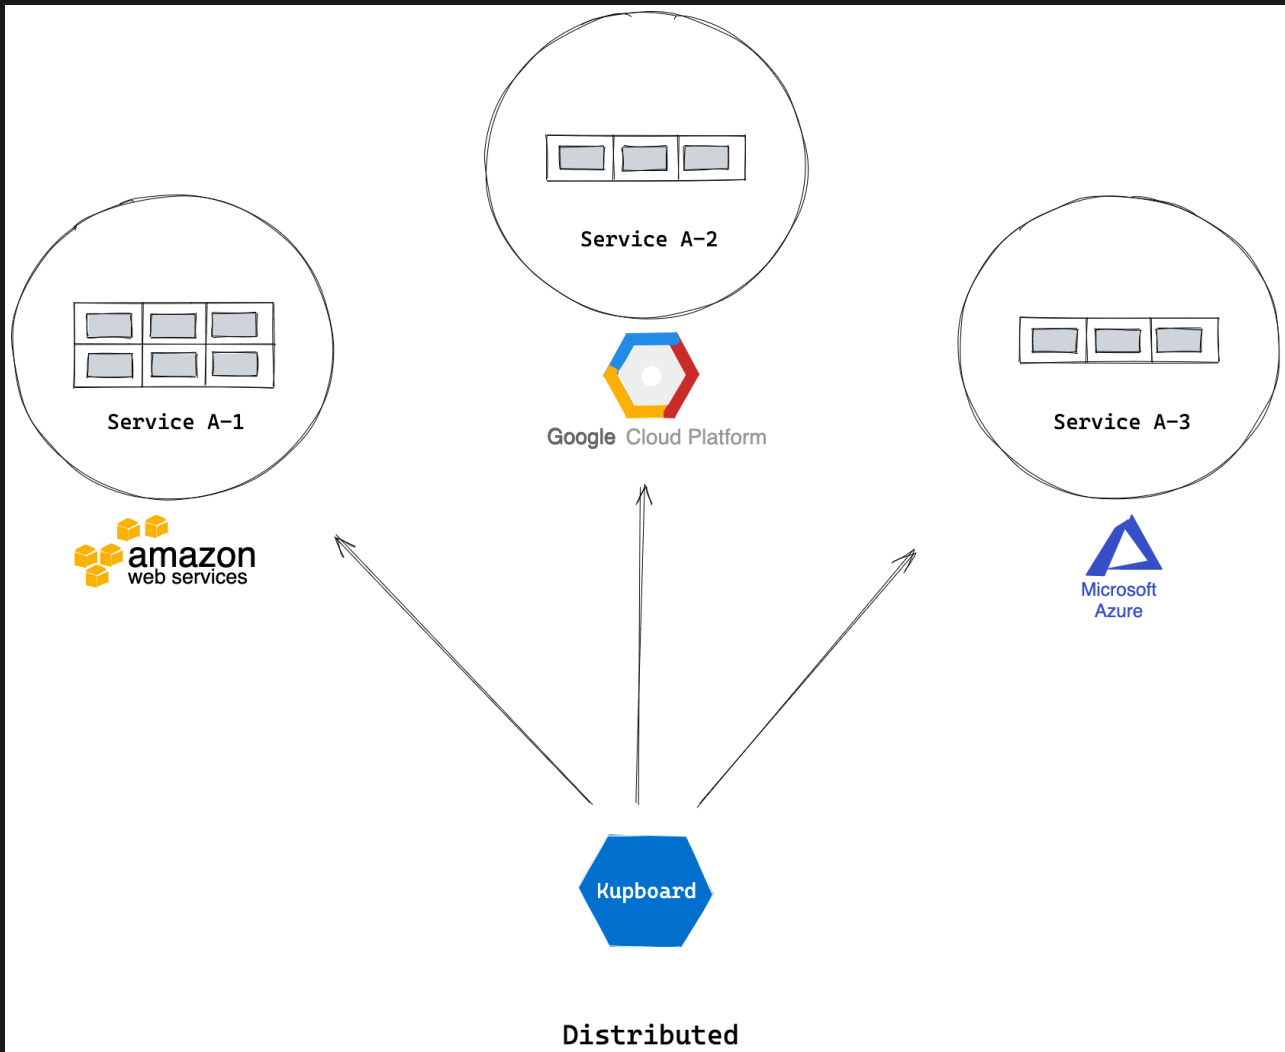

## Duplicated Strategy

Duplicated strategy is a cluster management strategy of kupboard that creates the same clusters on multiple cloud providers. It can be used for DR(disaster recovery), backup, globalization, etc.

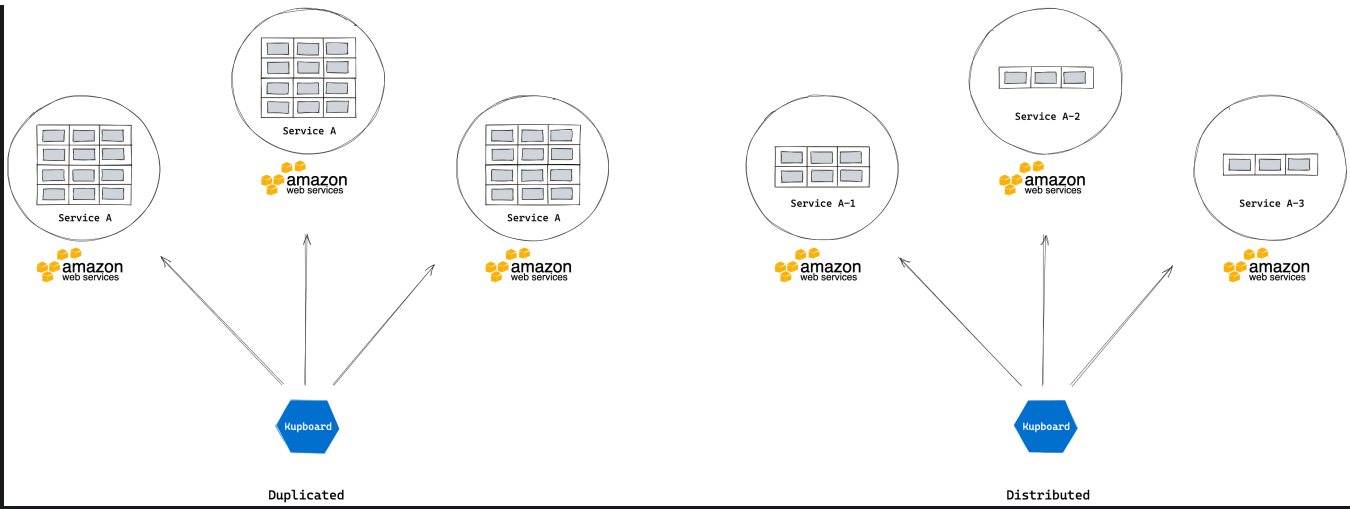

# Distributed Strategy

Distributed strategy is a cluster management strategy of kubernetes that creates a cluster across multiple cloud providers. Depending on the capabilities or functionalities of the cluster group, you can select and create the best cloud provider for each cluster group.

# Multi Regions

The duplicated strategy and distributed strategy can be applied to multi region as well as multi cloud. You don't need to use multiple cloud providers to create a cluster on multiple clouds. If you want to use a familiar cloud provider, you can use multiple regions instead.
