Case Studies Introduction

Hunden analyzed many University arenas across the country with the goal of answering many of the key questions outlined at the beginning of this report. Additionally, with OU joining the SEC in 2024, it is important to understand visitation trends of comparable universities within this conference.

New Developments: What can be learned from newly developed collegiate areas, or those under development currently? How does the mixed-use nature of many of the new developments influence these projects?

Public-Private Financing: How have collegiate arenas been financed?

Third-Party Operator: What is the impact of concerts, family shows and other events on the visitation to University arenas? How can a new arena's calendar be optimized to generate economic impact, that 'but for' the arena project, would not have occurred in the local area?

Visitation Analysis

Collegiate Arenas

Hunden assessed comparable arenas over the Big 12 and the SEC and those that were identified as comparable public-private developments with private professional management. This analysis leverages Placer.Ai geofencing data which utilizes cell phone data to provide estimates of visitation to specific points of interest (POI).

In terms of the student population, Placer registers a new "home" for a cell phone owner after 30 days of being at a new city every night. Thus, for each arena there is a slight overestimation of out-of-county and out-of-state visits during the initial events of the school year.

Visitation Analysis

Collegiate Arenas

Hunden's assessment of several privately managed arenas was aimed at understanding the potential visitation increase of the Project compared to what is currently experienced at Lloyd Noble. The analysis below shows that if the average efficiency (visits per seat) of the eight arenas analyzed is applied to the proposed Project of 10,500 capacity. The baseline visitation increase compared to the visitation at Llyod Noble in 2022 is an estimated to be 256,500 additional annual visits. This analysis shows the impact of concerts and other non-university events and supports the projections completed in the demand, financial and impact chapters of this report.

Case Study: Profiles

Moody Center Austin, TX

Tenant(s) — UT Basketball, UT Volleyball, Austin Gamblers (PBR)
Seating Capacity — 15,000 seats (total), 10,763 (basketball)
Year Built — 2022
Ownership — University of Texas, Austin
Operator — OVG 360 & UT Austin
Project Cost — \$338 million
Financing — 100% University/Private Share

Notes — The Moody Center is the new home for the Longhorns. When the arena opened in 2022, it replaced the Frank Erwin Center. The arena predominantly services the University; however, it hosts many other events such as concerts, family shows and other entertainment acts. There are multiple groups that have contributed to the success of the venue including Oakview Group, Live Nation/C3 Presents and the University of Texas.

UT contributed the approximately 6.6 acres to OVG in a lease agreement. OVG developed the arena and provides UT with approximately 60 dates per year for athletics and other university events.

The Moody Foundation contributed a \$130 million grant for the arena, which gave them naming rights for the venue.

Chesapeake Employers Insurance Arena Baltimore, MD

Tenant(s) — UMBC Athletics Seating Capacity — 4,654 (basketball) 5,500 (concerts) Year Built — 2018 Ownership — UMBC Operator — OVG 360 Project Cost — \$85 million Financing — 100% University/Private Share

Notes — The Chesapeake Employers Insurance Arena was completed in 2018 for the University of Maryland, Baltimore County (UMBC). Prior to the completion of the new arena that UMBC athletics basketball and volleyball programs played in the Retriever Activities Center, which is the school's recreation center.

The naming rights deal with Chesapeake Employers Insurance was a 15-year \$5 million deal. The arena was largely funded by the University and private organizations.

Chesapeake Employers Insurance Arena

Pinnacle Bank Arena Lincoln, NE

Tenant(s) — Nebraska Cornhuskers Seating Capacity — 15,500 seats (basketball), 16,130 (center stage) Year Built — 2013 Ownership — City of Lincoln Operator — ASM Global Project Cost — \$181 million, \$375 million West Haymarket District

Financing — 100% Public

Notes — The Pinnacle Bank Arena was completed in 2013 to replace the former Bob Devaney Sports Center. The arena was a part of a larger revitalization effort of the West Haymarket District in downtown Lincoln, NE. The surrounding West Haymarket District includes over 100,000 SF of retail space, 100,000 SF of office space, 200 hotel rooms, 4,000 parking spaces, and 373 residential units.

The construction of the arena was largely a city driven effort. Funding from the city, which is further detailed on following slides, largely came from a bond offering for the development of the arena and the surrounding Haymarket District. The city imposed several additional taxes that went to a vote, which would assist in paying off the cities bond payment obligations.

Pinnacle Bank Arena Financing Detail

Although the financing may be different than what takes shape in Cleveland County/Norman, the Pinnacle Bank Arena project is a strong case study to show that it takes creative financing to fund these large, significantly impactful projects. Additionally, the tax generation that has occurred to assist in funding the arena has far exceeded expectations showing the significant impact in terms of new spending these Project can generate.

The funding of Pinnacle Bank Arena required a creative financing strategy that required voter approval of additional taxes to revitalize the West Haymarket District and construct the arena.

Revenue Streams to Payback City Issued Debt

- 2% occupation tax on Lincoln's restaurants and bars
- 4% hotel/motel
- 4% rental car tax
- State sales turnback tax
- Parking revenue
- Premium seating revenue
- Naming rights

A joint public agency (JPA) was created to oversee finances of Pinnacle Bank Arena and the surrounding West Haymarket District. The project involved the relocation and elimination of existing railroad tracks and completion of other site preparation activities, the construction of Pinnacle Bank Arena, a community ice center, private retail and office space, a new Amtrak Station, residential units, surface and decked parking, public gathering areas, street and utility

improvements, landscaping, trails and walkways, pedestrian bridges, and environmental enhancements

Currently, occupation tax revenue is able to cover the bond repayment, stated in September of 2023 by Lyn Heaton the cities Finance Director. The following breakdown is the financial position of the financing of the Project as of September of 2023:

Bond Debt:

Total: \$595.5 million

Amount Paid: \$166 million

Revenue:

Occupation Taxes: \$202.8 million

Premium Arena Seating: \$24.2 million

Turnback Taxes: \$15.4 million

Parking Revenue: \$22.2 million

*Arena revenue used to covert operating expenses not included.

Pinnacle Bank Arena Outperforming Expectations

2022 Revenue

Occupation Taxes: \$20,004,357

Intergovernmental: \$3,585,254

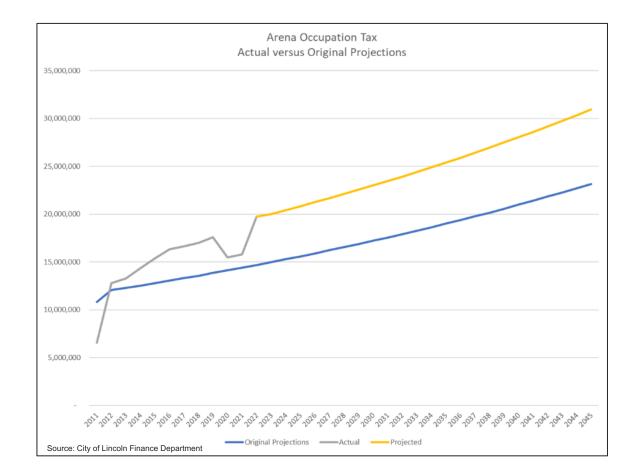

Parking facility revenue: \$\$3,049,351

Suit and premium seating revenue: \$2,444,564

Investment Income: (\$16,614)

Other program revenues: \$3,648,9

The chart to the right shows that the revenue from the occupation taxes imposed has far surpassed initial projections. Collection of occupation taxes is currently \$30 million more to date than originally projected, which has assisted paying off the city's debt obligations. One driving factor behind this is the fact that the arena created a ripple effect of additional new development beyond what was initially planned in the West Haymarket District.

Pinnacle Bank Arena & West Haymarket District

KFC Yum! Center Louisville, KY

Tenant(s) — University of Louisville Seating Capacity — 22,090 seats (basketball), 17,500 (end stage) Year Built — 2010 Ownership — Louisville Arena Authority Operator — ASM Global Project Cost — \$238 million Financing — 54% Public, 46% Private

Notes — The KFC Yum! Center is the home of the University of Louisville Cardinal's men's and women's basketball teams, volleyball team, and the Louisville Xtreme of the IFL.

Financing for the venue came from \$339 million in bonds through Kentucky's Economic Development Finance Authority. The debt would be paid off over 30-years from many sources. The city set up a downtown TIF of six square miles in the downtown. The TIF has fallen short of expectations, which has resulted in the Arena Authority restructuring its annual payments.

There are several reasons the financing fell short. The projections on the TIF revenue streams were made directly before the 2008 recession. Additionally, given that the projections of the TIF were inflated compared to reality, the deal with UL was less favorable for the building itself.

Despite these concerns and challenges, the facility is a robust economic driver in the downtown. During the nine-year period between FY 2015 and 2023, the facility has generated nearly \$942 million in total spending within the Louisville economy, or an average of nearly \$122 million per year when excluding the pandemic.

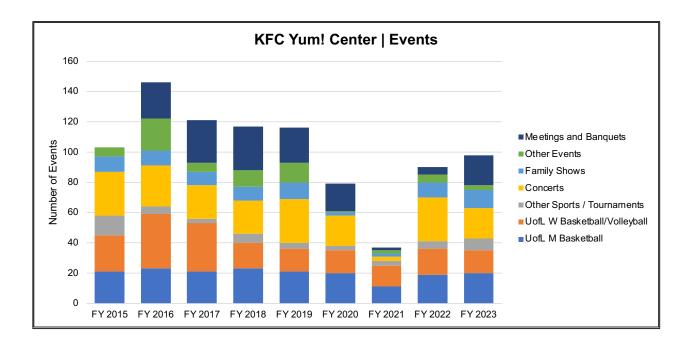

KFC Yum! Center **Events**

The table and chart to the right outlines the number and type of events held at the KFC Yum! Center from fiscal years 2015 through 2023.

In 2023 the KFC Yum! Center continues to rebound from the pandemic, hosting 16 percent fewer events than the facility did in 2019. The facility maintains a similar number of concerts and sporting events as it did in 2019 but hosts fewer events in the "Other Events" category (i.e. blood drives, community events).

Additionally, since FY 2017 only selected women's volleyball games have been hosted at the KFC Yum! Center.

EventType	FY 2015	FY 2016	FY 2017	FY 2018	FY 2019	FY 2020	FY 2021	FY 2022	FY 2023

Total	103	146	121	117	116	79	37	90	98

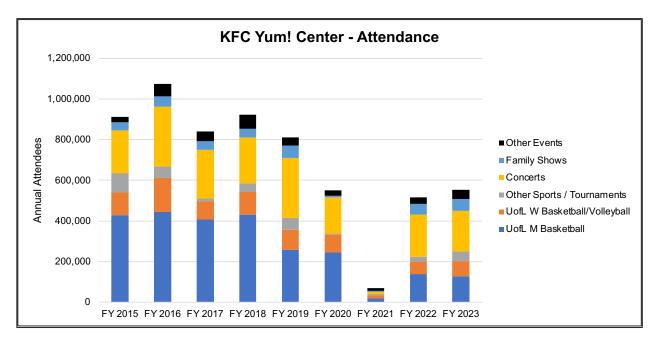

KFC Yum! Center Attendance

The table and graph to the right outlines estimated event attendance by event type for the KFC Yum! Center.

Though the total number of events hosted at the KFC Yum! Center has rebounded to 84 percent of pre-pandemic levels, total attendance has not, with FY 2022 and FY 2023 attendance at 64 and 68 percent of FY 2019 attendance.

This is largely due to reduced attendance per game for University of Louisville men's basketball games, which is often tied to each season's team performance.

Attendance per concert is currently higher than prior to the pandemic.

KFC Yum! Center **Financials**

The table to the right outlines the historical financials for the KFC Yum! Center. While per capita spending within the arena has increased significantly, a decrease in attendance (mainly to university-oriented events) has led to decreased revenues for the facility.

Inflationary pressures and below average Men's basketball attendance has led to reduced margins, yet the facility continues to operate profitably. In FY 2022 and 2023 the facility operated at an 8 and 9 percent operating margin, respectively.

New Developments: Baylor University Waco, TX

Baylor University is currently underway with a new 7,500-seat basketball arena, Foster Pavilion, which is nearing completion and will host its first collegiate basketball game in early January 2024. The arena was the conception of a public-private partnership between the university and the city of Waco, with \$65 million of financing coming from the city and the remaining coming from the university sources. The total project cost is reported at \$212.6 million. Outside of this new project the city, university and private development community have planned for a mixed-use entertainment and lifestyle district directly outside of the new venue.

Phase I includes the following elements which are completed and leasing:

- 266 units residential, 250 units student housing
- 6,000 SF of retail & restaurant space
- 600 new parking spaces, in addition to the 400 recently completed

The city of Waco approved \$20.2 million in TIF funding for the mixed-use components, which includes the clean up of environmental contaminants, create public improvements, waterfront improvements, news streets, infrastructure, a parking garage and a re-do of University Parks streetscape from Jackson to I-35. The public improvements include Farmers Market Plaza.

Phase II and III-unit count and square footage detail has not been released but will include an extensive amount of retail and restaurant space, hotels and additional residential development, which is shown on the following slide.

The mixed-use district will occur over three phases with phase I elements already being delivered.

Phase II and III are planned to deliver in 2025.

There was a complex land swaps to get Project off the ground. The University purchased land from the City for the Foster Pavilion, and the City did a long-term lease to Catalyst Development for the commercial components of phase I.

Brazos Riverfront Construction

University of Central Florida Orlando, FL

In 2007, the University of Central Florida opened Knights Plaza, an athletic village and shopping center on campus located near the now FBC Mortgage Stadium. The plaza consists of student housing for 2,000 students in four towers, 183,000 SF of retail and restaurant space, as well as a new 9,400-seat Addition Financial Arena and renovated 2,300-seat Spectra-managed The Venue at UCF Arena which is used as both a practice facility and concert / event venue.

In the past, the plaza has had difficulties filling the retail space due to lack of free parking and changing economic conditions. The plaza is currently occupied by more than 15 dining and retail establishments that cater to the large student population.

The \$107 million development was funded through the following:

- Student housing revenues \$59 million
- University operating funds \$30 million
- Naming rights / sponsorships \$11 million
- Commercial leases \$7 million

In Spring 2022, the UCF Board of Trustees approved numerous improvement projects for the football stadium and Knights Plaza including additional stadium seating, premium options, relocation of practice fields, new resistance river and hydrotherapy pools, and additional parking. Total cost of these phased improvements is expected at \$125 million to be funded by university-issued debt and private donations.

Knights Plaza Development Overview

The Venue

Addition Financial Arena Knights Plaza incorporates retail, restaurants, public space and student housing adjacent to University of Central Florida's athletic facilities. The plaza acts as the "Campus Town Center."

Recently approved investment in the district will allow for a renovated football stadium, additional commercial developments and new public gathering spaces.

Key Highlights Case Studies

There is no "magic bullet" on how to get large event venue anchored mixed-use districts done. However, these case studies show some examples on how it has been done elsewhere, how these venues have performed, and what the true impact is when a high-caliber venue is privately managed.

The net new economic impact of several of the arenas analyzed can be seen in the significant boost in annual visitation to these venues compared to the old venue where the team played. The geofencing analysis shows that many of these fans came from outside the given city or county.

Revenue streams within the venue and outside of the building are used to assist in the funding of these large projects. This includes naming rights, advertising, luxury suite revenue and others. Although not applicable in all situations, district taxes such as ticket taxes or others can be levied on events within the venue, with the goal of those revenue streams being another funding stream to fund the project.

Venues with private management maximize the efficiency of the venue, as seen by the significant visitation generated by these venues. Those operated by universities that do not open their schedules to external events, such as Lloyd Noble currently, do not.

Demand & Financial Projection Overview

Original Development – OU Foundation Development Program provided by Team Norman

Original Development – OU Foundation Development Program Demand & Financial Projections

The adjacent table shows Hunden's projections of key performance metrics for the core elements of the OU Foundation Development Program provided by Team Norman.

Lease/rental rates and occupancy levels were based on Hunden's assessment of the competitive market environment and performance of comparable assets.

Arena & Event Venue Proforma Projections

The table below outlines the proforma financial statement of the proposed 10,500-seat event venue within the greater development.

Hunden expects that arena and event venue will generate a net profit of approximately \$423,000 in Year 1 of operation and stabilize at approximately \$1.8 million by stabilization in Year 3 of operation.

Full Development – Rock Creek Entertainment District TIF #4

Full Development – TIF #4 Demand & Financial Projections

The adjacent table shows projections of key performance metrics for the core elements of the OU Foundation Development Program as well as the additional development that would occur within surrounding parcels within the TIF #4 district.

This includes the addition of the National Weather Experience, additional retail and hotel assets in Year 8, retail and restaurants in Year 9 and finally multifamily in Year 10.

Lease/rental rates and occupancy levels were based on Hunden's assessment of the competitive market environment and performance of comparable assets.

Economic Impact Summary

Hunden uses the IMPLAN input-output multiplier model, which determines the level of additional activity in the Cleveland County economy due to additional inputs. For example, for every dollar of direct new spending in Cleveland County, the IMPLAN model provides multipliers for the indirect and induced spending that will result.

The net new and recaptured direct spending discussed earlier in the chapter is considered to be the **Direct Impact**.

- From the direct spending figures, further impact analyses will be completed.
- Indirect Impacts are the supply of goods and services resulting from the initial direct spending. For example, a
 visitor's direct expenditure on a hotel room causes the hotel to purchase linens and other items from suppliers. The
 portion of these hotel purchases that are within the local economy is considered an indirect economic impact.
- Induced Impacts embody the change in spending due to the personal expenditures by employees whose incomes are
 affected by direct and indirect spending. For example, a waitress at a restaurant may have more personal income as a
 result of the induced customer's visit. The amount of the increased income that the employee spends in the area is
 considered an induced impact.
- **Fiscal Impacts** represent the incremental tax revenue collected by the state, county or city due to the net new economic activity. The fiscal impact represents the government's share of total economic benefit. Fiscal impacts provide an offset to the potential public expenditures required to support the development.
- **Employment Impacts** include the incremental employment provided not only onsite, but due to the spending associated with it. For example, the direct, indirect and induced impacts generate spending, support new and ongoing businesses, and ultimately result in ongoing employment for citizens. Hunden will show the number of ongoing jobs supported by the project and provide the resulting income and income taxes generated.

Net New Assumptions

It is expected that there will be some level of substitution/cannibalized spending that would occur due to the development of the project. However, similarly there is also expected to be some recaptured spending that would occur that is currently leaked to surrounding markets outside of Cleveland County for retail, restaurant, and entertainment offerings.

The following table shows Hunden's projections of

substitution/cannibalization, as well as recaptured spending, within each asset within the development. These assumptions are kept constant in each scenario.

Hunden utilized several quantitative methods which resulted in the adjacent daytripper, overnighter, and net new percentages shown. These methods for each asset category are explained in further detail on the following slide.

Net New Assumptions

Arena: Lloyd Noble is much larger than the proposed Project. Average attendance for OU Men's Basketball over the past decade was approximately 9,500. With an arena that only contains 8,000 fixed seats for basketball games, Hunden assumed that there would be negative net new for OU Sporting events. However, given that Lloyd Noble currently does not host any other external events, such as concerts, family shows, or other events, these would yield a high net new percentage to the county. Daytripper and overnighter percentages were crafter based on Hunden's geofencing analysis of Lloyd Noble over the past several years and of comparable university arenas.

National Weather Experience: The National Weather Experience will be an impactful asset for the county, given that the county does not contain anything similar to what is being proposed. The current National Weather Museum and Science Center in the county is not located in compelling location and receives little visitation. Hunden assessed comparable museum experiences across the country to understand their levels of visitation and how far people travel to visit these experiences.

Retail: Hunden assumed 17 percent of sales would be net new to the County. For substitution, Hunden assessed the current levels of visitation to UNP and other core retail nodes in Cleveland County and discounted the net new percentage to account for substitution that would occur. Moreover, Hunden utilized geofencing from Placer. Ai to assess the number of people who live in Cleveland County who currently leave the county and go to core entertainment and retail districts in Oklahoma City, this included Bricktown among other popular retail nodes. This analysis assisted in accounting for recaptured spending that would occur for residents that are currently leaving the county for these offerings. The result of this analysis was a net new assumption of 17 percent for the retail within the district.

Office: Hunden assumed 78 percent of the incomes/employees onsite would be net new to the County, meaning that the companies that leased space within the development came to Cleveland County for a compelling office location for their employees. Conversations local groups and data from the Bureau of Labor Statistics on employment assisted in deriving this percentage, although this is highly contingent on the types of employers that lease space within the office component of the development.

Residential: It was estimated 14 percent of new residents would move from outside of Cleveland County. Hunden utilized the Bureau of Labor Statistics and Lightcast to assess migration to Cleveland County.

Hotel: Utilizing Placer.ai geofencing data and historical hotel performance from Smith Travel Research (STR), Hunden determined that 31 percent of the rooms revenue generated from onsite hotels would be net new to the county.

Original Development – OU Foundation Development Program Economic, Fiscal & Employment Impact

Net New Spending to Cleveland County Original Development – OU Foundation Development Program

Direct net new/recaptured spending, falls into the five categories: food & beverage, lodging, retail, transportation and other.

The total of these direct spending categories during the 25-year period shown is more than \$2.3 billion for the entire Project. The retail category is the largest category of direct spending, contributing to an estimated \$820 million over the time period. The direct retail spending is new spending that would occur across the Cleveland County economy in existing retail establishments due to the Project. The other component of direct spending, which includes spending on ticketed events within the event venue, is the second largest category of direct spending and is expected to generate approximately \$652 million.

Total net new spending impact to Cleveland County over the 25-year time period, including indirect and induced spending that would occur, is estimated to total \$3.7 billion.

Net New Earnings from job growth are expected to total \$1.6 billion over the 25-year time period. New full-time equivalent jobs are expected to be created from the Project, primarily in the mixed-use district but also at the new event venue. During the 25-year period, the Project is expected to support an average of roughly 1,513 jobs in the Cleveland County economy. These are net new jobs generated by the Project, meaning those that would not be created 'but for' the development. Labor that is transferred or would have been created regardless of the Project is not included.

Source: Hunden Partners	_								-		-										-		-		

Hunden estimated the potential tax collections that would be generated from the project that would be considered net new to Norman/Cleveland County.

The Project is expected to generate \$553 million in local taxes over 25 years, with a majority of this coming from onsite property tax generation. Additionally, it is estimated there will be approximately \$107 million of net new sales tax and hotel tax generated in the greater local economy over the timeframe.

Onsite Property Tax Projections

Original Development – OU Foundation Development Program

The following table shows the property tax projections for the Original Development on the OU Foundation land over 25 years. Over 25 years the development is estimated to generate nearly \$446 million in ad valorem which contributes directly to the Rock Creek TIF #4.

Onsite Sales Tax Projections

Original Development – OU Foundation Development Program

The adjacent table shows the onsite sales tax revenue calculation that would be generated by OU Foundation Development Program. Hunden estimates that based on direct onsite spending these would generate an estimated \$116 million over 25 years.

Moreover, although not directly applicable to TIF#4, the onsite hotels are estimated to generate \$20 million in City of Norman HOT tax over 25 years.

Full Development – Rock Creek Entertainment District TIF #4 Economic, Fiscal & Employment Impact

Net New Spending to Cleveland County Full Development – Rock Creek TIF #4

As noted earlier, the full development includes the OU Foundation Development Program and the additional land within the TIF #4 that is owned by NEDC and other entities.

Direct net new/recaptured spending falls into five categories: food & beverage, lodging, retail, transportation and other.

The total of the direct net new/recaptured spending for all five categories during the 25-year period is close to \$2.8 billion for the entire Project, inclusive of additional land within the TIF that would be built out during later phases of development. Spending generated by the National Weather Experience would contribute to additional spending in the form of ticket sales and there would likely be substantial retail and food and beverage spending generated onsite and in the greater local economy.

Total net new spending impact to Cleveland County over the 25-year period, including indirect and induced spending that would occur, is estimated to total \$4.5 billion.

Net New Earnings from job growth are expected to total approximately \$1.8 billion over the 25-year period. Onsite new full-time equivalent jobs are expected to be created from the full development, primarily in the mixed-use district, but also at the new event venue and the National Weather Experience. During the 25-year period, the Project is expected to support an average of roughly 1,804 jobs. Labor that is transferred or would have been created regardless of the Project is not included.

Hunden estimated the potential tax collections that would be generated from the project that would be considered net new to Norman/Cleveland County.

The Project is expected to generate \$617 million in local taxes over 25 years, with a majority of this coming from onsite property tax generation. Additionally, it is estimated that there will be \$135 million of net new sales tax and hotel tax generated in the local economy over the timeframe.

Onsite Property Tax Projections

Full Development – Rock Creek TIF #4

The following table shows the property tax projections for the full development and build out within the TIF #4 district over 25 years. Over 25 years the development is estimated to generate \$482 million in ad valorem which contributes directly to the Rock Creek TIF #4.

Onsite Sales Tax Projections

Full Development – Rock Creek TIF #4

The adjacent table shows the onsite sales tax revenue calculation that would be generated by all development within the Rock Creek TIF #4 district over 25 years. Hunden estimates that based on direct onsite spending these would generate an estimated \$138 million over 25 years.

Moreover, although not directly applicable to TIF#4, the onsite hotels are estimated to generate \$31 million in City of Norman HOT tax over 25 years.

hunden partners

Hunden Partners is a full-service real estate development advisory practice specializing in destination assets.

With professionals in Chicago, San Diego, and Minneapolis, Hunden provides a variety of services for all stages of destination development in:

- Real Estate Market & Financial Feasibility
- Economic, Fiscal & Employment Impact Analysis (Cost/Benefit)
- **Organizational Development**
- **Public Incentive Analysis**
- Economic and Tourism Policy/Legislation Consulting
- **Research & Statistical Analysis**
- **Developer Solicitation & Selection**

The firm and its principal have performed more than 1,000 studies over the past 25 years, with more than \$20 billion in built, successful projects.
