

Unlock Your Child's Reading Potential

Did you know 80% of learning is visual? Discover how behavioural optometry can transform your child's reading ability.

What is Behavioural Optometry?

Complete Visual Assessment

Evaluates both sight and visual processing

Eye-Brain Connection

Focuses on how eyes and brain work together

Learning Barriers

Identifies visual skills affecting academics

Warning Signs to Watch For

Reading Difficulties

Frequent re-reading, skipping lines, losing place, or slow reading speed. May also include poor reading comprehension despite understanding individual words.

Visual Discomfort & Avoidance

Eye rubbing, headaches, squinting, or closing one eye. Your child might avoid reading or close-up work due to visual strain or blurry vision.

Behavioral & Academic Indicators

Short attention span during reading, messy handwriting, difficulty with spelling, or general frustration and anxiety related to schoolwork.

Vision Powers Reading

80% of Learning is Visual

Most classroom tasks rely on visual strategies

Strong Visual Skills Required

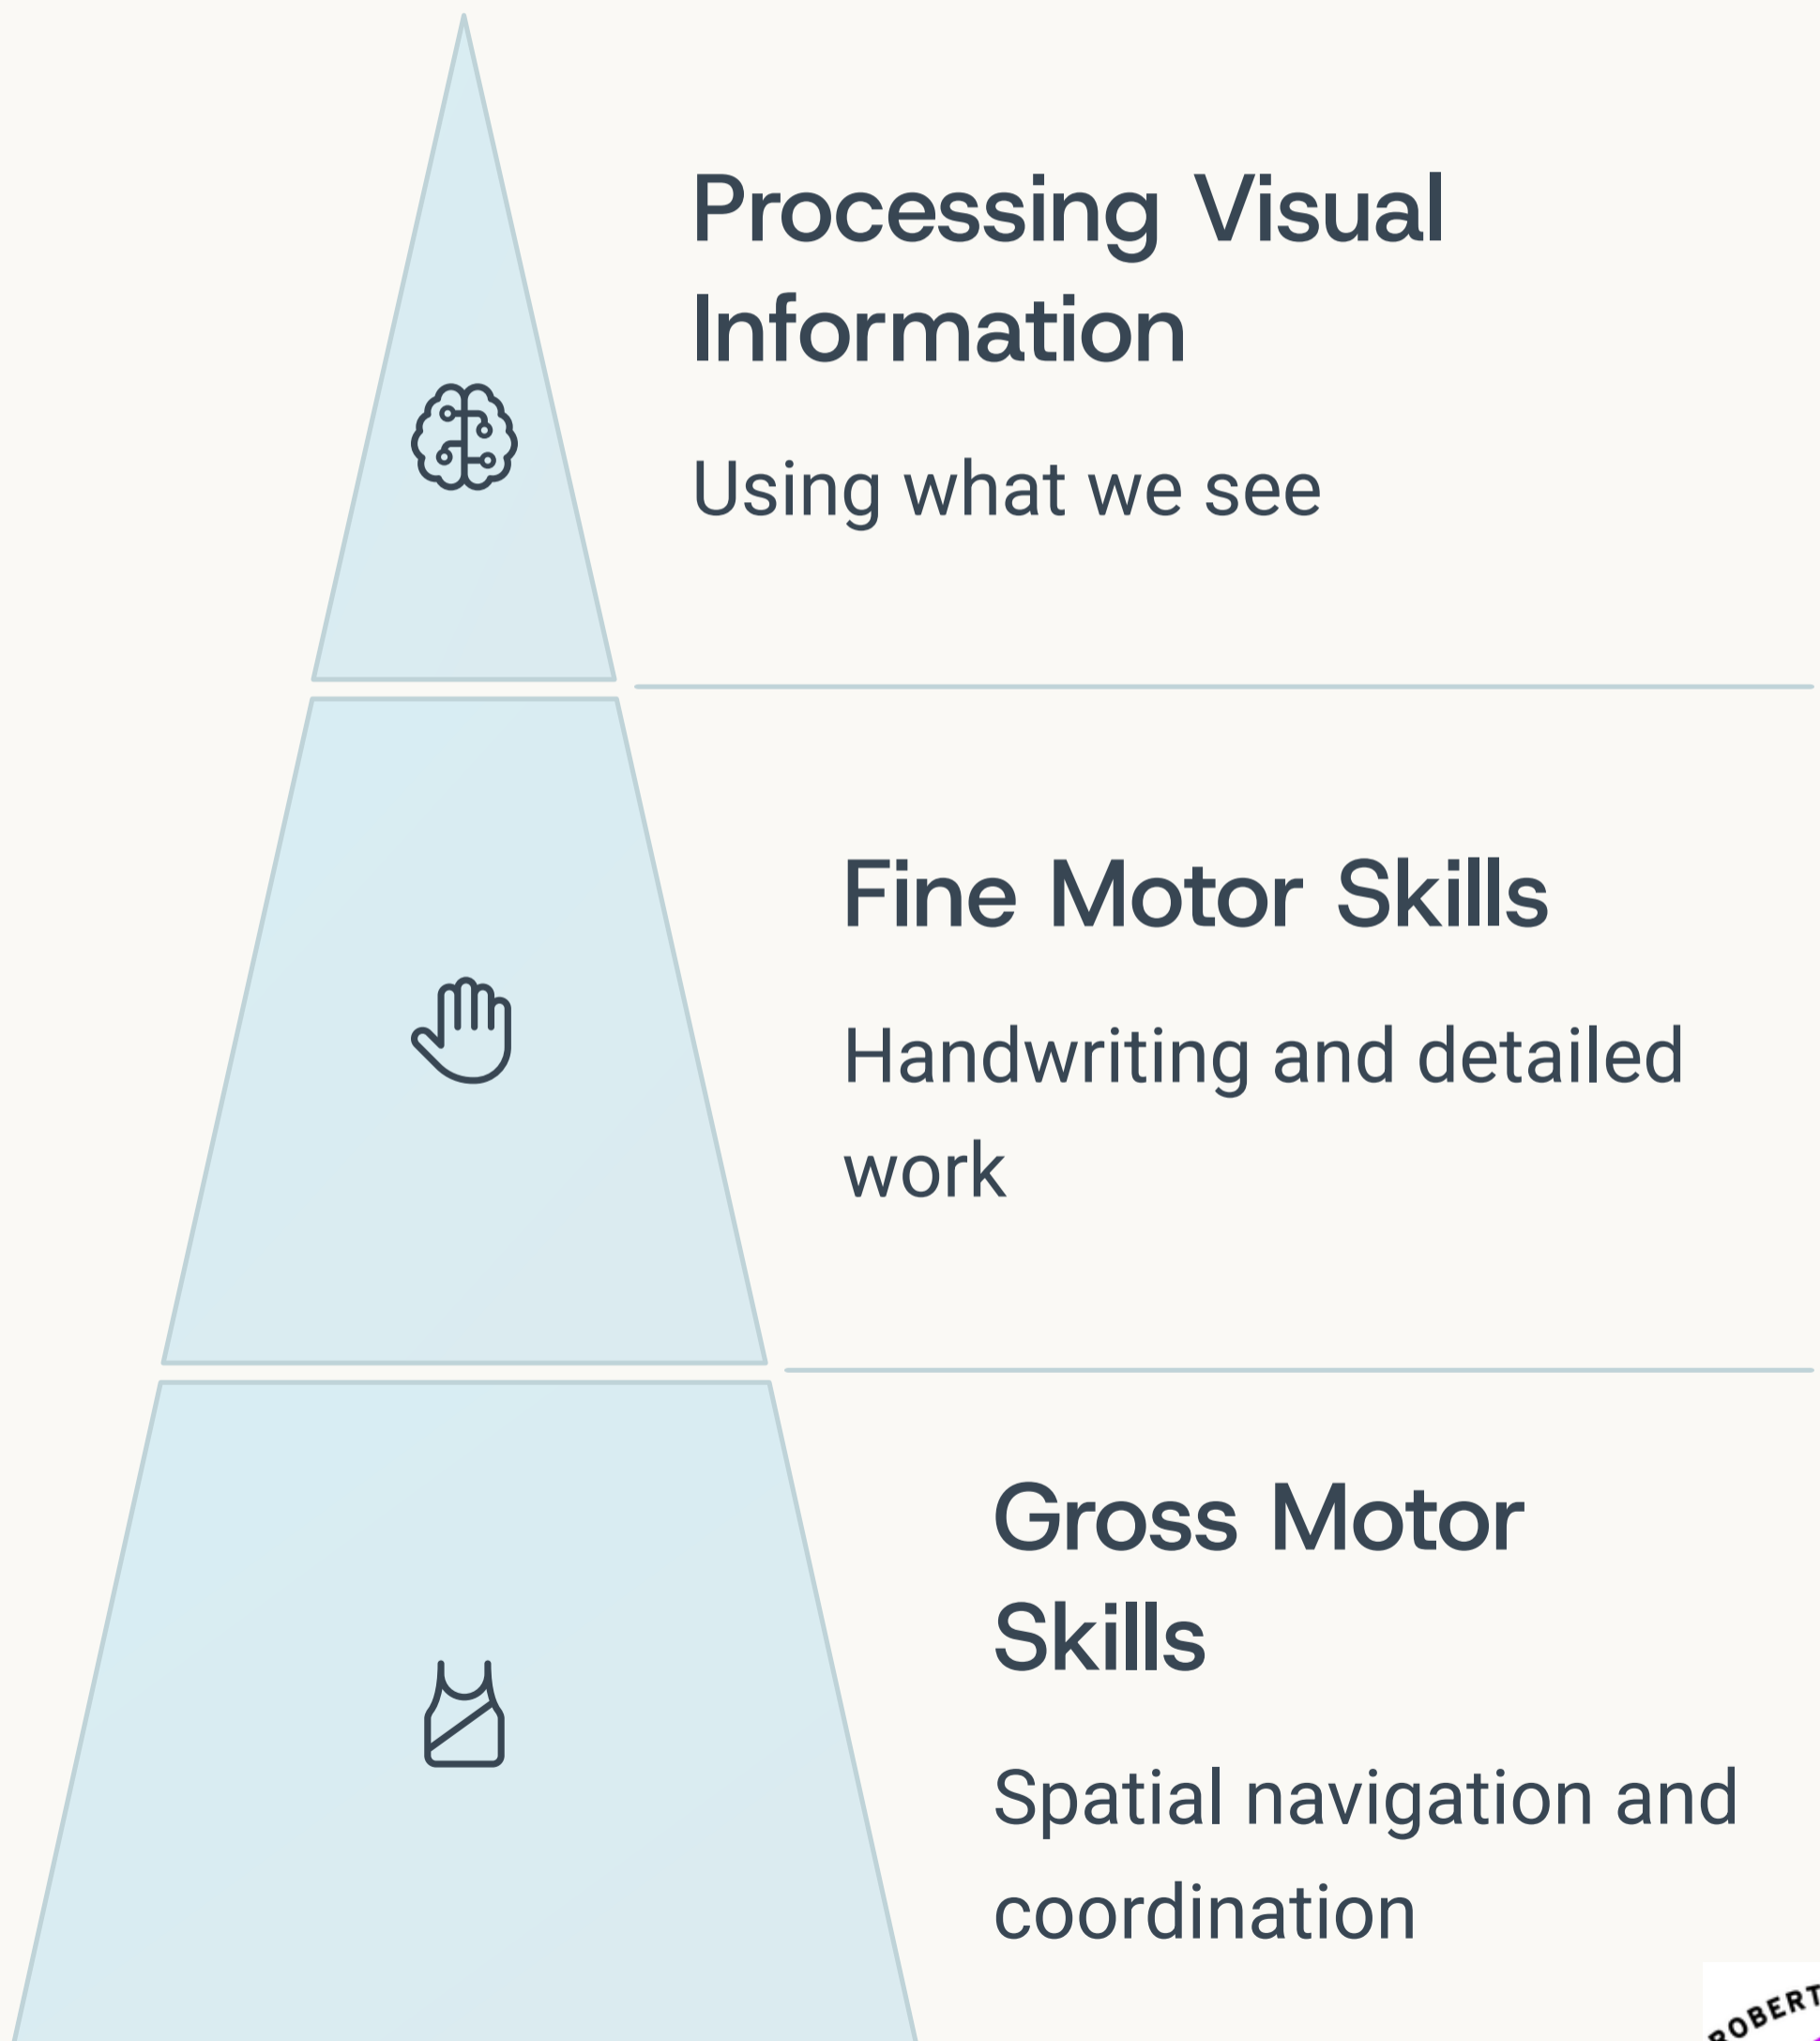

Children need these to read effectively

Information Processing

Affects both intake and retention

More Than Just Seeing Clearly

Skills We Assess

1

Antigravity

Spatial orientation, posture, and balance for stable visual input.

2

Centering

Accurate visual aim and focus to direct attention.

3

Identification

Visual processing and memory for recognizing and understanding forms.

4

Speech–Auditory

Connecting visual information with language and sound for comprehension.

Help Your Child Succeed Today

Don't wait! Early assessment can identify hidden visual barriers to reading success. Book a consultation with us today!
