

# ROPEBRAKE

MOOSE MFG

The **ROPEBRAKE** is a mining safety device that automatically locks and secures lifting ropes when hoisting mining cables. During lifting or lowering of mining cables, the ropebrake automatically engages when slack is applied, this allows personnel to stay safely away from below the cables until the ropebrake lock engages.

**The ROPEBRAKE makes hosting mining cables safer and easier.**

- **Self-braking design** – automatically grips under load for maximum safety.
- **Heavy-duty steel construction** – rugged, durable, and powder-coated for long life.
- **Proven in the field** – trusted in the mining industry worldwide for over 30 years.
- **Added safety spring** – prevents accidental lowering.
- **Pivots 180° for hoisting in any direction.**
- **Maintenance-free.**
- **16 kg (35 lb)**
