THE OPERATING REALITY

Operational risk changes across every project phase.

A major project moves from survey and construction through commissioning, operation and shutdown. People, access, assets and exposure change at each stage. Security must evolve with them.

The people

Workforce, executives, visitors and local stakeholders.

The operation

Mobilisation, access, movement and continuity.

The licence to operate

Proportionate security that supports trust and delivery.

AN INTEGRATED CLIENT PARTNERSHIP

A disciplined extension of the project team.

Horizon can support security, operations, HSE, HR, travel or project leadership, working within established governance. The client retains control while one Horizon lead remains accountable for delivery.

Your governance remains in control.

We work with incumbent providers, site teams and local partners without duplicating responsibilities. Agreed reporting lines remain clear, sensitive information is controlled and decisions are documented.

ENGAGEMENT MODELS

01	**ASSESSMENT**	Defined review, site visit or assurance task.
02	**PROJECT**	Mobilisation, construction or commissioning support.
03	**SPECIALIST**	Journey, medical, intelligence or crisis support.
04	**RETAINED**	Ongoing oversight and agreed mobilisation.

A CREDIBLE DELIVERY PARTNER

Already have arrangements? Add assurance, capacity and resilience.

Existing arrangements do not prevent independent assurance, additional capacity or specialist support. Horizon can start with one controlled requirement and work alongside the client's current providers.

01 Independent review

Benchmark a site plan, mobilisation model or operating procedure.

02 Second source

Pre-approved support when incumbent capacity is constrained.

03 Surge cover

Additional personnel for mobilisation, disruption or a threat spike.

04 Specialist task

Bring Horizon in for medical, journey, intelligence or sensitive work.

05 Regional support

Fill a geographic or operational gap without changing the wider model.

06 Controlled transition

Move through a controlled handover where standards need to improve.

Start with one requirement. Keep the rest in place.

SITE AND PROJECT SECURITY

Secure the project without slowing the operation.

Effective project security combines proportionate controls, clear authority and practical awareness of how people, contractors, materials and vehicles move through the site.

Access

Personnel, visitors, contractors, vehicles and deliveries.

Assets

Plant, equipment, materials, information and key systems.

Continuity

Incident response, escalation, handover and recovery.

ACCESS | PERIMETER | PATROL | INCIDENT RESPONSE

MOBILISATION AND SECURITY DESIGN

Build security into the project from the start.

Early security input reduces redesign, closes ownership gaps and gives contractors a workable operating model before people and assets arrive on site.

ASSESS

Threat, location, stakeholders, programme and dependencies.

DESIGN

Zones, access, staffing, communications and escalation.

MOBILISE

Select, brief, deploy, test and adapt before operations begin.

EXECUTIVE VISITS AND PROTECTIVE SUPPORT

Senior visits should be secure, efficient and operationally credible.

Horizon coordinates routes, arrivals, site access, movement and contingencies for executives, investors, government visitors and other higher-profile personnel.

Advance

Route, site, schedule, arrival point and contingency review.

Interface

Coordination with PAs, site leadership, security and HSE teams.

Continuity

One operating brief across vehicles, venues, escorts and handovers.

JOURNEY MANAGEMENT

Secure movement across remote and complex routes

Planned movement for personnel, specialists and executives, combining route assessment, communications, vehicle readiness and escalation arrangements.

ROUTE Primary routes, alternatives, timings and risk points.

VEHICLE Checks, recovery planning, tracking and communications.

TEAM Integration with operations, travel, HSE and local support.

SCALE One movement, workforce rotations or retained support.

PERIMETER, ACCESS AND ASSET PROTECTION

Layered security.

The strongest physical security is proportionate to the asset and practical for the operation. People understand the controls, exceptions are managed and vulnerabilities are addressed.

The perimeter

Fencing, lighting, CCTV, detection, patrols and response.

The access model

Identity, permissions, vehicles, deliveries, visitors and exceptions.

Controls are designed around the operation. The operation is not left to work around unclear controls.

REMOTE, OFFSHORE AND MARITIME SUPPORT

Distance changes the response. Preparation closes the gap.

Remote sites and offshore operations depend on disciplined planning, reliable local coordination, medical contingencies and clear triggers for escalation or evacuation.

ASSESS	CONNECT	SUPPORT	MONITOR	RESPOND

INTELLIGENCE, RISK AND INCIDENT AWARENESS

See the change early. Protect the operating picture.

Operational awareness supports better decisions before disruption reaches the site. Horizon combines practical intelligence, disciplined reporting and proportionate escalation.

Changing risk

Threat monitoring, protest, crime, community tension, travel disruption and emerging exposure.

Information control

Need-to-know handling of plans, movements, incidents, personnel and sensitive site information.

MEDICAL, CRISIS AND EVACUATION READINESS

Prepared before the incident. Coordinated when it matters.

Medical and security capability can be delivered independently or integrated into one plan, with clear thresholds, reliable communications and accountable decisions.

Medical support

Qualified medics and trained responders for sites, journeys, remote work and higher-risk phases.

Crisis coordination

Security and medical escalation, liaison, evacuation and continuity decisions.

Preparedness

Evacuation routes, receiving facilities, communications, triggers and rehearsed contingencies.

ONE BRIEF | ONE ACCOUNTABLE LEAD | ONE OPERATING PICTURE

DELIVERY MODEL AND ASSURANCE

One disciplined process. One accountable lead.

The same risk-led process applies from one assessment to an enduring multi-site programme.

01

ASSESS

Project phase, people, assets, environment, threat and controls.

02

DESIGN

People, posts, routes, procedures, reporting and contingencies.

03

MOBILISE

Select, vet, brief and deploy suitable personnel and local support.

04

OPERATE

Operate, liaise, report, supervise and adapt as conditions change.

05

REVIEW

Review performance, capture lessons and strengthen continuity.

CLIENT ASSURANCE

2012
ESTABLISHED

UK + GLOBAL
REACH

BESPOKE
DELIVERY

CONFIDENTIAL
BY DEFAULT

SIA-licensed personnel where required. Role-appropriate vetting and selection. Project-specific conduct, confidentiality, reporting, supervision and escalation.

THE PROJECT OUTCOME

Clear scope. Named contacts. Coordinated delivery. Measurable assurance.

CONFIDENTIAL ENQUIRIES

Start with one requirement.

Whether the requirement is immediate, planned or exploratory, a confidential conversation is enough to consider assurance, specialist or full-service support.
