RE: perkEpave Installation Training

To whom it may concern:

perkEpave was established in the Spring of 2017 with the goal of providing quality Flexible Porous Paving at a competitive price with a dedication to Customer Service.

To achieve these goals, we insist on all work crews involved in the installation of perkEpave participate in the installation training program which includes a remote webinar to achieve the classroom learning experience along with the onsite installation training by the perkEpave LLC representative.

The perkEpave LLC training representative has over 12 years of experience in the installation of Flexible Porous Paving and trained work crews in 21 States throughout the continental United States, encompassing over ¾ million square feet of installed Flexible Porous Paving.

This approach to assuring quality installation is perkEpave LLC's quality assurance program; where photos of all onsite training projects are photographed, added to the perkEpave website, along with the contact information for all trained work crews. Having the project management representative witness the installation process and the final finish of the Flexible Porous Paving is also part the perkEpave LLC dedication to a quality product and dedication to customer service.

Feel free to call (215) 316-6383 anytime with questions or concerns.
