

Recommended Painting: Product and Process

Painting the surface of perkEpave products; creating decorative logos, directional arrows and lines can be done without obstructing the permeability of perkEpave products.

To obtain the intended results it is extremely important to make sure the surface is clean and dry and the porosity has not been compromised. (Vacuuming may be required if water puddles when poured on the perkEpave). A leaf blower will adequately remove any surface debris.

perkEpave LLC recommended coating is LOXON XP® Extra, manufactured by Sherwin Williams. Loxon XP® can add design and style and will prolong the lifetime of perkEpave porous paving products. The product is to mixed 1 to 1 with water and over spraying the surface is the recommended application process.

Note: Extreme care must be taken when painting perkEpave porous paving products as not to allow clogging of pours and/or cause paint bleeding into adjacent colors. Painting should be done by a professional to achieve the intended result. perkEpave LLC will not be held liable for faulty workmanship.
