

Pfizer Global Webinar Series

# Biomarker testing in NSCLC: Who, How, When and Why?

## Time and Date

Wednesday 19<sup>th</sup> May 2021 at  
10:00, 13:00 and 18:00 CET

## Chair's invitation

Mark your calendar for an exciting upcoming webinar series. An international panel of expert speakers will present on the role of molecular testing, best practice approaches to molecular testing and interpreting results, as well as real world country insights. You will also have opportunity to interact with the panel and ask questions during the live Q+A session. This exciting event series will include expert commentary on:

- **The role of molecular testing**
  - The role of molecular testing in advanced/metastatic oncogene-driven NSCLC
  - Why testing for EGFR, ALK and ROS1 is important in NSCLC
  - Role of Biomarker Testing in treatment selection
  - Current challenges to widespread uptake of molecular diagnostics in NSCLC
- **Best practice approaches to molecular testing**
  - Tissue biopsy
  - Approaches to molecular testing (sequential vs parallel)
  - Understanding testing methods
- **Interpreting results**
  - How to interpret test results
  - Timelines for test results
  - Making treatment decisions
- **Real life case studies**

## Target Audience

Pathologists and oncologists working in NSCLC

## Time and Date

This webinar series will be held on Wednesday **19 May 2021 at 10:00, 13:00 and 18:00 CET**. Each session will have a different panel of experts, as well as the opportunity to interact with the panel during the live Q&A session
