

# ACTIVATED K

UNLOCK THE **POTASSIUM** YOU ALREADY OWN.

**1 gallon Activated K = 25+ lbs dry potash**

## The Problem

- Decades of potash over application = nutrients locked up within clay
- Traditional soil tests reveal less than 25% of what's actually in the soil
- Fertilizer dollars wasted season after season

## The Solution

- **1 gallon Activated K = 25 lbs dry potash**
- Activated Carbon penetrates clay to release K
- Immediate K availability plus access to unavailable soil K

## The Proof

- Our T.E.S.T. shows true K levels
- Confirms years of over application
- Releases potassium bound to clay

## The Payoff

-  **More Efficient Budget**
-  **High Stress Tolerance**
-  **Better Crop Performance**

**ACTIVATED CARBON**  
TECHNOLOGIES

# Quit investing in tie-up. **STOP LOSING K. START RECLAIMING IT.**

## THE ACTIVATED ADVANTAGE

Activated Carbon keeps your nutrients working instead of locking up. It protects your investment, fuels soil biology, and builds stronger ground.

Unlock hidden nutrients

Break down crop residue faster

Deliver more potassium into the plant

Build stronger, deeper roots

Cut back the need for lime & fertilizer

Maximize the value of past fertilizer applications
