Preparation for german cockroach treatment.

When preparing for german cockroach treatment please keep in mind the better prepared for the treatment you are the better job we can provide for you.

Prior to treatment

- Remove all items from kitchen cabinets and bathroom vanities.
- Remove all items from the countertops in the kitchens and bathrooms.
- Remove all items from around the baseboards in the entire house.
- Items removed from these areas can be placed in bags or in totes and placed in the middle of the living room or stacked on top of a table.
- Doing a very thorough deep clean of the entire home will help this treatment be successful (Thoroughly clean floors, disinfecting inside cabinets, cleaning behind and under all kitchen appliances.)
- Clear out nice stands and dressers as this is also a harborage point for german cockroaches.

After treatment

- Clean all countertops thoroughly with soap and water.
- Any visible chemical residue or white dusk can be cleaned up with a damp rag.
- If needed air the home out by opening windows and running fans.

Vacate time

For a german cockroach treatment we require you to vacate the home for 6 to 8 hours to let the product fully dry. If you come back into the home and products have not fully dried we request you stay out a little longer.
