

## Youth Invents Neurophone

A former Billings boy, Pat Flanagan of Bellaire, Tex., near Houston, has invented a neurophone, a device to enable persons to hear without ears.

He is a son of Mr. and Mrs. Gil Flanagan. His father worked with Shell Oil Co. exploration in Billings for a time in 1959 before being transferred to Houston.

Flanagan was the youngest person to receive his ham radio license in Bismarck, N.D., while he was in junior high school.
