

We Invite You to Help Us With Our Research . . .

Because the Sensor II is a new departure in the field of Pyramid Power, there are many unplumbed depths to date, many unanswered questions that must be pursued relentlessly for answers that might even transform the life of all mankind.

Please reveal your successes in experimentation, and report all your experiences, so that we may add this information to that already garnered. You will be doing an invaluable service for the science of Innergy, and for your fellow man.

Belt Buckle is same design

THE SENSOR II

You now possess the space age invention that actually possesses and magnifies the mystifying powers of the Pyramid!

Surrounding the authentic Pyrenneagram are concentric waves of diamonds, each one resonant to electromagnetism in a different signal, making it equivalent to a 6 sq. ft. pyramid.

The hieroglyphics circling it are Egyptian symbols of power that, many believe, bring a whole body of knowledge to present day civilization. They include the Lotus, symbol of Creation, Scarab, sign of Longevity, the Goose, Emblem of Geb, God of Earth, the Crook and Flail, power symbols of the Pharaohs, the Crocodile, Water Spirit, Ibis, sign of Toth, God of Wisdom, the Sun Disc, Ostrich Feathers, symbol of Justice and Truth, the Sacred Eye of Horus, or Uchat, symbol of Health, Bast, Cat Goddess of Protection, the Ankh, symbol of Life, the Sa, sign of Union, among others.

Your custom-designed Sensor II is exquisitely die struck, so the metal captures every detail of the original sculpture from which the die was hand tooled. It was then hand finished.

If air pollutants contaminate your medallion and cause it to turn color, simply steel wool it lightly

CIGARETTES AND TOBACCO: Pipe, tobacco, cigars and cigarettes change flavor dramatically after Sensor treatment. Flavor and aroma lose harshness when treatment is ten minutes or more. If you like your cigars strong, don't place them on a Sensor — you will be surprised at the mildness.

SHARPENING RAZOR BLADES: Razor blades can be sharpened by placing them on a Sensor between shaves with the blade aligned length-wise to magnetic north. The razor should be placed on a piece of paper or cardboard to avoid interfering with the Sensor's energy circuits. Blue blades work best, but all razors seem to benefit from this treatment.

ENERGIZING SWIMMING POOLS: We have had reports of people using Sensors to keep their pools clean. One associate placed two Sensors in his Olympic-size pool, one at each end. (Sensor I users, ring-side up). His pool was algae-free and on chemicals at the time he added the Sensors. Although he stopped treating the water for algae, his pool has remained clean for over ten months. The Sensor will, however, attract scale while in the pool, and needs to be cleaned with soap and a fingernail brush from time to time.

DREAM COLORS are increased by the Sensor. You may place your Sensor underneath your pillow and watch your dreams become more vivid and frequent.

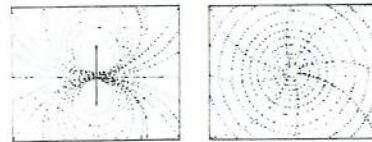

Diagram of Tensor Field around Sensor II. Left shows cross-section of its torus-shaped field. Right shows view of field off front of Sensor. Energy fields are positive off both sides. Sensor appears surrounded by a yellow-golden sphere of light under auravision.

ENHANCING MEDITATION: We have found that energy fields in meditation are enhanced when the Sensor is held in the left hand and a stream of energy is visualized flowing through the Sensor and into the body. Many people enjoy placing the Sensor on their foreheads during meditation. They claim that it sticks to their brow when they enter the alpha state. This is just one of the many intriguing properties of the Sensor, as reported to us over the months.

We have found through our work in energy control that the mind can easily affect the energies used by a Sensor or other pyramid energy device. This is why a person who is very negative can interfere with the effects of a Sensor or pyramid. Our course in energy control, called the Flanagan Innergy Experience, is personally taught by Pat Flanagan. This course teaches the student how to direct and apply these energies for accelerated evolution; moreover, the course is the result of over twenty years of investigation into the most effective means of balancing, stimulating, and evolving the energy systems in the body. For more information on this course, please write to Source of Innergy.

SENSOR^{T.M.} INSTRUCTIONS

The Flanagan Experimental Sensor is a major breakthrough in pyramid technology. Produced on a flat, golden disc, the Flanagan Sensor emits energy like a pyramid, but without the size, bulk, or alignment restrictions of a conventional pyramid.

Pat Flanagan, inventor and researcher, has discovered that shapes have distinctive energy patterns, and that energy patterns are in turn related to specific shapes. This investigation into the power and effect of shape on energy led Dr. Flanagan to discover that the shape of a pyramid may be changed to reduce the bulk, and increase the efficiency of the structure. As understanding the nature of energy has progressed, different forms of the pyramid have been produced, resulting in more advanced designs of the Sensor—now also available in several wall poster models, which are specifically engineered to "innergize" rooms and enhance the power of meditation.

Earlier models of the Sensor involved whorls, spirals, and circles of different sizes and shapes. Through testing, we have obtained the most powerful of these models and made them available at low cost to the public.

The Sensor I, the first popular Sensor Pat Flanagan created, is the standard of personal, portable pyramid energy generators, and is comprised of ten gold, resonant rings, each tuned to a specific microwave frequency. These frequencies, as well as the wide range of harmonics covered by the device, serve to focus and radiate pyramid energy, interacting with the powerful pyrenneagram symbol on the front of the Sensor to produce an electrically charged system which strengthens the wearer by beaming beneficial pyramid energies directly into his or her acupuncture system. Many reports have been received in our offices attesting to the value and versatility of this device, the popularity of which has inspired the production of the Sensor II.

The Sensor II is the latest, most powerful addition to the field of pyramid energy devices. Its design is based on the principle of a microwave slot antenna, and represents the most efficient use of pyramid energy. The unique feature of the Sensor II is that it radiates a strong, beautiful field in all directions - and is far more powerful than the earlier Sensor I. As with the earlier Sensor, one cannot receive too much energy from the Sensor II, so you may wear it as much as you like.

The Sensor may be used in many ways, a few of which will be
