

PROVIDING SOLUTIONS FOR BASEBOARD INSTALLATIONS

Prefabricated baseboard backer with an integrated top flashing component used in commercial environments. The system is designed to prepare walls for flooring and baseboard installations. Clayton Base comes ready to install with limited on-site preparation and accommodates a variety of floor and base materials in different combinations.

- Allows flooring material to be installed in advance of wall finishes, maximizing critical path efficiency.
- Establishes a logical transition line between floor and wall finishes.
 - Integrated corners designed for impact resistance.
 - Water resistant backer minimizes premature failure.

AVOIDABLE PROBLEMS

Broken corners

Overlapping products

Awkward transitions

Base falling off wall

- Easy to handle in 8-foot lengths, ready to install.
- Can be used with various floor finishes.
- Prevents overlapping materials that are unsightly and uncoordinated.
- Provides the end user with a durable and long-lasting finished product.
