

**SALT
CHLORINATOR**

The Pool Salt Chlorinator is an excellent choice for maintaining a swimming pool. Consisting of a main engine and an electrolytic generator, it efficiently disperses a precise amount of sea salt or edible salt into the pool. Through electrical decomposition facilitated by circulation, it effectively sanitizes the water.

The salt chlorine generator utilizes cutting-edge micro-electronic computer technology, enabling comprehensive control of all operating systems via the electronic circuit system. With its user-friendly interface, operation is both functional and straightforward. Additionally, it features automatic reset and fault alarm capabilities for added convenience. Users can select between two control system modes: periodic and aperiodic, providing flexibility according to their preferences. Overall, this system efficiently saves time and energy.

Model No.	Electrolytic cell dimensions L*W*H(MM)	Control box dimensions L*W*H(MM)	Chlorine output (g/h)	Voltage(V)	Pool Volume(m3)
SQ20	365*126*168	360*260*130	20	AC220V- 50Hz	90
SQ30			30		130
SQ40			40		170
SQ50			50		220
