

...of the wagon, and making a circuit of the town, running over Mr. Barnes hay scales, and over Mr. Owens front steps, they crossed the town westward and ran into Mr. Master's fence, where they were caught without receiving any injuries. The young gentleman's face was pretty badly scratched and the whipple trees was broken, aside from that, no more damage was done.

Mrs. William Fields is recovering from a severe illness, and Miss. Mary Ingalls is recovering, but very slowly. Her eye sight which she had almost lost is improving as she gains strength.

Mr. Noris of Lamberton has moved into town, and is prepared to do all kinds of work in the line of Shoemaking.

Last Thursday as John Wiggins junior was riding a young horse to the pasture the horse made a sudden plunge forward throwing Mr. Wiggins to the ground and inflecting a severe bruise on his head he arose and walked to the house but was not in his right mind until the next day. Dr. Hoyt was sent for, who informed his friends that he would soon be able to at-

THE GAZETTE

Wm. B. HERRIOTT,  
Editor.

The wheat crop of Ohio has been seriously damaged by drought.

Gen. A. J. Edgerton will deliver the oration at Marshall on the Fourth.

Cyrus H. McCormick, of reaper fame, has been elected to membership in the French Academy of Sciences.

It is stated that Mr. Foster's bill, allowing Homestead settlements a year in which to make settlement on claim, has become a law.

Maj. Smith is spoken of in Washington for Secretary of War and his appointment urged by one of the papers. The Maj. will receive a strong endorsement in this State for it.

The young Prince Imperial, Louis Napoleon, was killed in the Zulu land, South Africa, by a party of natives in ambush. The prince was the British army and had achieved courage.

Sensational Conkling and Lamar have been exiling each other. The attack was made by Lamar and was premeditated. It was the intention to humiliate Conkling, which he failed, signally, to do.

The President vetoed the Judicial appropriation bill for the reason that it deprived the executive of all power to execute a certificate of appointment. It was sent to the House on Monday. The President signed the army appropriation bill.

The State Normal Board, after considerable discussion, elected Prof. Shepard as Principal of the Winona Normal School. There was a strong effort to re-elect Prof. Phelps but the opposition was too decided. Prof. Shepard had been Principal of the Winona public schools.

The Rev. Dr. Williamson, a Presbyterian minister and one of the oldest pioneers of Minnesota, died last week at his home in, or near, St. Peter. Dr. Williamson spent many years as a missionary among the Indians in the Minnesota Valley. He was long before the outbreak. He had great influence among the Indians and accomplished a great deal of good. His acquaintance among the early settlers of the valley was general and he was very highly regarded.

The strike of railroad laborers here, they say, ended without blood shed or any serious damage. A company of State Militia, Capt. Bolander's of New City, were ordered by the Governor and arrived at the place of disturbance. The strike resulted from a dissatisfaction with the wages paid—\$1.25 per day for men and \$2.50 for women. The demand was for a raise to \$1.50 and \$5.00 or, full payment of all the money they were owed. The men struck, receiving the amounts due them. No damage was done to the railroad or contractors property, although threats were made. The strikers pressed some of the men to join in service and killed some.

The cost company have discontinued working at Ottumwa for the present, after reaching a death of one hundred and seventeen feet. Two seams of coal were passed at Ottumwa, feet down, two and four inches respectively. We saw Mr. Drexler last week, and he is confident of success as ever. He says he does not expect paying coal at a less depth than about two hundred and fifty feet—*Amalgam Transcript.*

SENIATOR S. R. McMillan, Lake City Leader. We have often asserted that our young State had reason for special self-congratulation in possessing two such representatives in the U. S. S. R. McMillan and Wm. Windom. Time only proves to all, that our State stands out the very first in that exalted body in the character and ability of its members. While Senator McMillan is in the debates of Congress as his Senatorial colleague—older as a representative of our State—he has nevertheless done a deal of the most important work of his body—work on important committees, where distinguished ability alone is in demand. In this direction, indeed, Minnesota has been especially complimented. Mr. McMillan's ripe scholarship and attainments in the law, his far-reaching ability as a statesman, made him a noticeable member of the Senate early in his experience therein, and from that time to the present he has been justly to constant labor in the important work where each man as he is absolutely demanded.

The Burlington Hawkeye tells of a man who recently died, and who was called Billy Emerson, and pays it cheerfully. He pays six cents school tax and swears about it, and every where. That is the reason why a good many school teachers, who are called "billy" brothers, with the negro minstrel gets \$500 per salary and wears purple and blue.

The Wheat Prospects. In some localities where the wheat crop was not sufficiently liberal the use of seed there are too many weeds and too few wheat stalks, but generally throughout Minnesota the prospects are excellent, much better, so far as we can gather, than in any other state. The general wheat crop of 1879 does not promise to be a large one. California has suffered from drought; so have Kansas and Nebraska. In Wisconsin the dry weather was prolonged to such an extent that the wheat crop was generally shorted, but the grain did not get so early a start. The winter wheat regions generally do not see any reason why Minnesota should not do as well as the other states, and sell it at prices much higher than those received for the crop last year.

The wheat crop is certain to be prosperous if the state is only moderate. With a big crop and high prices, it will fairly boom.

Death Rattle in Various Occupations. Nobody doubts that the occupation of a man has much to do with his general health, and with his chances of death. Statistics prove that the doctor, the lawyer, the scientist and professional men—not physicians; then follow Protestant clergymen, engineers, farmers, laborers, and workers in iron; then come schoolmasters, teachers, and the clergy of the Roman Catholic church, among whom the mortality is most numerous. Next we have druggists and butchers, miners and glass makers, railway men and dock laborers, and last of all, common laborers, among whom the mortality is greatest, and much more than double that of the first mentioned occupation.

The deduction which may be drawn from these facts are very instructive. It is practically useful; it proves that the quiet pursuits of science tend to prolong life, as well as outdoor labor, provided it is not on railway or in iron work; in more wholesome than to work in iron, or on the farm, as is might be expected, while the confined labor of a schoolmaster is as injurious as the same of a clergyman. In the case of the school-keepers, being most exposed to the temptation of intemperance, and long life, as well as those with whom they habitually keep company. So says the Manufacturer and Dealer.

A STARTLING INVENTION. An invention has recently been made in England which casts into the shade all previous advances in labor-saving machinery, and has fairly, at least, to restore to British manufacturers that trade of which the American have been gradually depriving them during the last few years. When, some weeks ago, the machinery of this invention was in English chambers, which could scarcely credit it that the march of improvement could reach such a point.

From the returns of thirty dairies in the State of New York as the business, Mr. B. Gilbert, of New York, has calculated the expense of producing butter and cheese during the past year. In those dairies the average cost of milk was 5.20 cents per pound. The entire expense of feed, labor, and other expenses, averaged \$47.70 per cow, leaving \$7.55 as the small apparent balance of profit. The comparative dairy of 1900 has been made anywhere near making its expenses during the past year.

It may be remarked in connection with the above, that here in this western country, where the dairy is small compared with New York and other Eastern States, it is reasonable to assume that the business of cheese making property and intelligently conducted, must yield a handsome profit, and especially so where associated effort takes the place of individual operations, as in cheese factories. Certainly there is no reason to suppose that Minnesota dairymen in the figures above presented—*Farmers Union.*

A farmer near Marshalltown, Iowa, last year raised considerable tobacco, three hundred and fifty bushels, which he shipped to Louisville, Ky., bringing in that market \$11,150 and \$10.75 respectively, and pronounced it very profitable. Here is that same quantity of most famous corn, see any value in it.

Last month 80,000 pounds of eggs were shipped from Omaha to San Francisco. Allowing 8 eggs to the pound, there were 440,000 eggs, and bringing them at the low price of ten cents per dozen their cash value was \$5,280.00. Here is that same quantity of most famous corn, see any value in it.

With reference to the manufacture of eggs it may be stated that one girl, who is paid at the rate of 14c per week, can produce 21,000 worth of these goods in six days. In fact, she can produce more in any way than an item of labor.

There is no doubt that the invention has been running now for more than two months without a hitch. It is probable that the principle will be applicable to other departments of industry.

What State Items.

Doctor J. W. B. Wolcott was in town on Monday. He has the appointment of Surgeon for the R. R. Company on this line of road, and will be constantly on his feet in this line. The Doctor has been up to the top of the mountain, and his health improved very much, and he is looking up to the top of the mountain.

Miss Mary Ingalls health improved, but her mind is still so much impaired that she cannot distinguish one object from another. She can discern day from night but even this slight vision is now failing.

John's town to Mrs. M. Shepperson, and with his family, has moved to his farm on the Cottonwood.

In the case where C. G. Galloway was contesting the rights of D. D. McPherson to holding his title claim, the case has been decided in favor of McPherson, to the satisfaction of all parties. A man who has fulfilled the law to the utmost of his ability, it would be a pity to see claims wrested from him.

Last Tuesday, during the absence of Mr. & Mrs. Joseph Stevens, two tramps came to the house at the same time, and they were both drunk. One of them, a young man, was armed with a revolver and fired it off occasionally for the purpose of intimidating Lemuel Stevens, a young man, who was in the house, who having considerable of the pioneer spirit in him he was not easily frightened. He stepped into the house and placed a loaded revolver in his pocket. They seemed to suspect what his movements meant, and quitted down the road, leaving a large pile of wood in the house.

A French Canadian when he passed this line of road last evening, leaving a large pile of wood in the house. He was a young man, named John, who was a student of the school children to whom he had been teaching the many performance he had been trained to.

Mr. Peter Hall, of Town One hundred and one, died Sunday evening, June 24, at his home in Redwood Falls, after a long illness. He was a young man, who was a student of the school children to whom he had been teaching the many performance he had been trained to.

Travellers, Dr. & Co. of Wisconsin have started a new Lumber plant in town. Mr. E. B. Barnes has charge of it for the present.

A very old affair took place last Sunday morning, when a young man living near Westbrook, who was of the Christiana Eveson family, was killed, by placing a revolver in his hand, and he had entered the roof of his month and came out in the center of his forehead, tearing the flesh and bone, and he died in a few minutes. Mr. Eveson had not been married more than a year or two. Family troubles is said to have been the cause of his rash act.

From the returns of thirty dairies in the State of New York as the business, Mr. B. Gilbert, of New York, has calculated the expense of producing butter and cheese during the past year. In those dairies the average cost of milk was 5.20 cents per pound. The entire expense of feed, labor, and other expenses, averaged \$47.70 per cow, leaving \$7.55 as the small apparent balance of profit. The comparative dairy of 1900 has been made anywhere near making its expenses during the past year.

It may be remarked in connection with the above, that here in this western country, where the dairy is small compared with New York and other Eastern States, it is reasonable to assume that the business of cheese making property and intelligently conducted, must yield a handsome profit, and especially so where associated effort takes the place of individual operations, as in cheese factories. Certainly there is no reason to suppose that Minnesota dairymen in the figures above presented—*Farmers Union.*

A farmer near Marshalltown, Iowa, last year raised considerable tobacco, three hundred and fifty bushels, which he shipped to Louisville, Ky., bringing in that market \$11,150 and \$10.75 respectively, and pronounced it very profitable. Here is that same quantity of most famous corn, see any value in it.

Last month 80,000 pounds of eggs were shipped from Omaha to San Francisco. Allowing 8 eggs to the pound, there were 440,000 eggs, and bringing them at the low price of ten cents per dozen their cash value was \$5,280.00. Here is that same quantity of most famous corn, see any value in it.

With reference to the manufacture of eggs it may be stated that one girl, who is paid at the rate of 14c per week, can produce 21,000 worth of these goods in six days. In fact, she can produce more in any way than an item of labor.

There is no doubt that the invention has been running now for more than two months without a hitch. It is probable that the principle will be applicable to other departments of industry.

To the Public.

Belleville & Co. at the well known "Redwood Mills" after to the Public all the different grades of flour and feed at the lowest living rates. We will therefore do an extensive cash business. No books kept. No money to trade, no deviation from this rule. Orders and trade solicited. The week Tuesday and Friday, you will always find us at the mill ready to suit you, come and see.

Yours Truly,  
BEVELL & CO.  
April 26th 1879.

WOOL! WOOL!
