## Camera Installation

June 2022

There are many security options that provide safety and security for you and your family. The Board of Directors has approved the following security devices.

### Camera/Video Doorbells:

This option allows you to see who's at your door even when you're not home. Doorbell cameras can be installed on either side of your door but cannot be installed on the door or above the door (see pictures below). You must submit a completed ARC application and include your adjacent neighbor's signatures.

### Wireless Cameras:

Wireless cameras can be installed within your unit looking outside through your windows. They are not to be attached to the building or any component of the exterior of the building, ex: fascia, windows, door, etc. Cameras cannot be pointed at or towards any other units windows, doors, or patio area to avoid invasion of privacy.

## **Wireless cameras in carports:**

If you would like to install a wireless camera within your carport you must submit an ARC application, including your adjacent neighbor's signatures. The camera must only be pointed at your vehicle and can only be attached to the face of the carport storage unit. Please see attached photo example.
