

Spex•Lite® 6926 EPS

Material Properties

- **Particle Composition**
Recycled Expanded
Polystyrene
Copolymer
- **Bulk Density (loose)**
~0.7 – 1.8 pcf
Avg: ~1.1 pcf
- **Specific Gravity**
~0.07
- **Size**
Dust to 5 mm
Avg: ~2.6 mm
- **Made in America**

Spex•Lite® 6926 EPS is a recycled proprietary lightweight modified expanded polystyrene copolymer blend. It mixes with Portland cement / pozzolanic binders, resins, coatings, roofing compounds and other systems to provide air voids and reduce system densities, often by 1# per gallon or more. It is a mix of rounded and angular particles of various sizes for optimal performance and incorporates well into formulated systems.
