

Most companies do not have an adequate view of their technology footprint and its associated risks, especially small and midsize firms. Hacks can be devastating, destroying reputations, costing millions of dollars and wiping out a considerable chunk of market capitalisation. Regulators have also demonstrated their appetite to pursue those who do not manage their cybersecurity and data confidentiality procedures correctly. You can now rely on Cybermap 360 to manage your cyber footprint and its associated risks. Depending on the size of your organization, you'll be set up within a few hours.

Why use Cybermap 360

- Understand your cyber footprint, where your systems are and who's running them;
- Visualize where your data is stored;
- Identify risks related to systems and data;
- Understand your system's security, hacking risks, Internet exposure, GDPR exposure and Cloud exposure;
- Manage your business continuity capabilities;
- Ensure a proper onboarding of new solutions;
- Be prepared for an internal audit, external auditors, regulators and any questioning;
- Demonstrate that you have full control over your cyber setup;
- And much more ...

Move away from Excel-based inventories and assessments. Contact us today to download your free version of Cybermap 360. You can use it at no charge, with no restrictions for three months. Visit us at www.cybermap360.com.

Cybermap 360 is available on premise. It is easy to install and maintain on a Microsoft Windows server. For a managed version in the Cloud, please contact us for pricing. Cybermap 360 is available in English only.
