BIOSECURITY FOR FRASER COAST AG SHOW

Working together for Animal Health:

In order to protect the welfare of animals attending the Fraser Coast Agriculture Show the following procedures are in place to ensure the safety of both our Competitors and their animals:

- All livestock entering the grounds should be from properties actively practicing good biosecurity principles to the best of their abilities.
- Animal/s demonstrating signs of disease or contamination will not be allowed to enter the grounds.
- Animal health declaration forms will be required from all livestock owners. Biosecurity Animal Health Declaration/Movement Record must be handed to the Chief Steward and signed by the owner or person in charge of delivery upon the animals arrival to the showgrounds, Biosecurity Animal Health Declaration/Movement Records must not be sent in to the Show Office with entry/nomination forms.

There are two health declaration forms for the Fraser Coast Agriculture Show available from our website or the show office.

- Horse Health Declaration Form
- Biosecurity Animal Health Declaration / Movement Record

All animals entering these showgrounds must comply with the health requirements detailed in the health declarations.

The Fraser Coast Agriculture Show Society has implemented the following:

- A veterinarian will be on call during the event
- A method of making emergency phone calls or alternative communication will be place
 - Entertainers; Chief Stewards; Directors supply office with a mobile number for contact.
- Designation of an isolation area for sick animals
- A Bio Security Plan is in place for the annual Fraser Coast Agriculture Show.

The Fraser Coast Agriculture Show Society Inc. makes the following recommendations for all competitors:

Primary responsibility for biosecurity at horse events lies with the horse owners / competitors, long before the event.

- Practice good biosecurity, good hygiene and decontamination of equipment
- Wash your hands with soap and water or use hand wipes and waterless hand hygiene solution immediately after handling animals.
- Competitors and animal carer/s are urged to promote the washing of hands to members of the public upon entering and leaving the livestock area.
- If an animal is unwell at an event, notify an event official (Chief Steward or Show Office) immediately
- Stop all non-essential contact with the sick horse/animal and blood or body fluids from the horse/animal until a veterinarian has advised otherwise.

NATIONAL CATTLE HEALTH DECLARATION EXPLANATORY NOTES

OVERVIEW

The Cattle Health Declaration is a legal document. Please complete accurately before signing.

Cattle Health Declarations are a way for producers to provide information about the health status of the cattle they are selling. Buyers should ask vendors for a Declaration and use the information provided to determine the health risks associated with the animals on offer.

Some states/territories require testing or certification additional to that outlined in this document e.g. Johnne's disease (JD) in WA and for Enzootic Bovine Leucosis (EBL) in Tasmania. Please check the entry requirements for any interstate movements at:

www.animalhealthaustralia.com.au/what-we-do/endemic-disease/livestock-movements

The original of this form is to be attached to the National Vendor Declaration (NVD) form accompanying the cattle, if applicable. A duplicate remains with the vendor; it is recommended the vendor retains a copy of this declaration for seven (7) years.

TREATMENTS & VACCINATIONS

Provide details on any cattle treatments in the last six (6) months and vaccinations within the last twelve (12) months.

Some manufacturers include more than one of the categories listed in the same vaccine, known as a combination vaccine. If you use a combination vaccine, each agent(s), as appropriate, should be detailed.

For vaccinations to be current, you must have followed the manufacturer's recommendation for vaccination. Typically, young animals or first time vaccinated animals need two (2) doses, followed by annual boosters. As variations to this general rule do occur (e.g. Silirum is given once only), you must use the manufacturer's recommendations.

At the date the declaration is made and as a result of the vaccination(s) given, the animals are considered protected from the diseases marked as treated.

QUESTION 3: PESTIVIRUS TESTING

Persistently infected animals can be detected by conducting a pestivirus antigen test. This test only needs to be conducted once in an animal's life. Cattle that test positive in most cases are persistently infected animals. Pestivirus antibody testing may be done to check the pestivirus status of the herd. Contact your veterinarian for assistance.

QUESTIONS 4, 5 & 6: JOHNE'S DISEASE BEEF CATTLE

Note: JD is a notifiable disease, so it is important to answer these questions.

Occurrence of JD refers to clinical disease in the herd or on the property(s). Clinical disease is an infected animal with chronic diarrhoea and weight-loss that does not respond to treatment.

The **Johnne's Beef Assurance Score** (J-BAS) is a voluntary tool developed for JD risk profiling. Details are available at www.animalhealthaustralia.com.au/jd-cattle-tools.

The J-BAS is an initial guide and purchasers should ask for more information about JD in the origin herd (see the JD in Cattle Biosecurity Checklist on the 'JD in cattle' webpage). The *National Farm Biosecurity Reference Manual - Grazing Livestock Production* provides a template to use for the property biosecurity plan. All plans should include the JD in Cattle Biosecurity Plan Checklist.

Check test – testing of 50 adult animals in the herd (or all eligible animals in a herd if less than 50 adult animals) biased to increase the probability of detecting infection, tested by (pooled) faecal culture or (pooled) HT-J faecal PCR. An ELISA test is available but is not recommended and also not accepted for entry of cattle to WA.

Sample test – screening of the adult herd or a large representative sample of the adult herd by an approved test (pooled) faecal culture or (pooled) HT-J faecal PCR. See note above for ELISA test.

Grazing of non-bovine species – Buyers of cattle from this consignment may consider the grazing of other JD-susceptible species (sheep, goats, alpacas) on the source property as important to their risk-management decisions. These buyers are entitled to seek information on how you have managed disease risks for all your livestock.

QUESTION 7: JOHNE'S DISEASE DAIRY CATTLE

JD herd status information about Dairy Assurance Score calculation is available at www.dairyaustralia.com.au/bjd
