

You may, of course, create your own principles of faithful use according to your own views and opinions. However, the general guidance is to create some clarifying aim, that aligns with the greater constructs of value creation that best serve your enterprise. For optimal construction, assurances around the classification of human capital and capabilities as intrinsic value, and its distinction from the utility-driven perspective of use value of capital, land and inputs, should be accounted for. A complete view of the three models, is outlined here. Together, they describe the integrative elements that create value through productive activity at all essential levels:

THE FACTORS OF PRODUCTION

INTEGRATIVE VALUE MODEL

COMMERCIAL FACTORS OF PRODUCTION

BIOPHYSICAL MODEL OF DEVELOPMENT

IMPACT

Economic Impact

Value Impact

Productive Impact

Biophysical Impact

PERSPECTIVE

Land, labor, capital and entrepreneurship

Employees, customers and shareholders

Capabilities, capital, land, inputs and technology

Biophysical parameters; biophysical possibilities

ENTER >> THE ENTREPRENEUR

Without the entrepreneur combining land, labor, and capital in new ways, many of the innovations we see around us would not exist. Thus, they are a vital engine of economic growth that build some of the largest firms in the world, as well as spark the creation of small business in your local neighborhood. At the larger scales, we consider the influence of people such as Richard Branson, Bill Gates or J.D Rockefeller.
