Fall Cleaning

GUTTER CLEANING & REPAIR

This season's main topic is **Repair** as part of the maintenance regime. One specific being corners.

Why repair corners?

If it's not dripping on your head or creating a puddle then turning into ice in winter time why bother, right?

Wrong!

You may or may not experience immediate inconvenience from a leaky corner, the real damage is done over time.

When a corner's sealant (caulking) has failed water and moisture will get behind it, to the wooden structure:

fascia board or rafters (to which the gutter is attached to) will get rotten resulting in the gutter to detach despite proper fasteners in place; moisture will seep up to the rafters and further up into the roofing structure causing water damage there.
