

Legacy Gardens Initiative

In December of 2024, ECO Planet Earth Corp. (ECO) launched the Legacy Gardens Initiative to serve the residents of Coconut Grove in Little Bahamas. ECO is pioneering the concept of Legacy Gardens by incorporating AC Water Recycling Technology, art, landscaping and food so we may come together to beautify and improve the assets of our faith-based partners, schools, and nonprofit partners.

The Initiative aims to heal and unite the community—one garden at a time. ECO acts as the holistic agency uniting our nonprofit and for-profit partners to fulfill our mission to unite humanity for children, animals, and the earth. The Initiative provides fresh spices and vegetables that can support local feeding efforts, while also empowering our partners to implement AC water recycling systems for landscaping, ice-making, and drinking water.

Through this effort, we seek not only to beautify each space but also to help preserve and improve their historical properties from the outside-in. Each garden will serve as a living tribute to the community leaders who have left a legacy of service and sustainability.

It will also become a space where all generations can come together—to grow, learn, and be inspired. By engaging youth and elders alike, each Community Legacy Garden will cultivate the next generation of environmental champions committed to advocating for both people and the planet.
