

LANSING SPATECH

HOT TUB SERVICE & MAINTENANCE

Chlorine Capsules

These capsules are designed to extend the life of your water when we are not there to chlorinate your hot tub. This makes it safer for you to use your hot tub, and easier for us to keep it balanced and clean. By simply adding ONE capsule after each use, you are actively keeping the chlorine levels above zero, allowing your hot tub to stay cleaner, longer!

Instructions

1. Turn on the jets, to help the chlorine dissolve.
2. Squeeze top edges of container to open.
3. Pour ENTIRE contents of the capsule into hot tub.
4. Allow chlorine gases to escape, before closing the cover. This usually takes 5-10 minutes. Allow jets to run a full cycle, even after closing the cover.
5. Close capsule and place it **UPSIDE DOWN** in the provided basket.
(This shows us which capsules need to be refilled.)
6. Your hot tub is now ready for its next use!

Empty capsules are collected and replaced at each visit. These instructions, as well as full chemical balancing instructions, and a “Frequently Asked Questions” page, are available on our website. Feel free to contact our office, or your technician, with any further questions.
