

## **Sprinkler Shields, (Road Guards)**

Shields are used to break up the spray of sprinkler heads to prevent unwanted over-spray and wash outs.

Shields come in either solid or mesh and may be unfinished or painted.

Style #1 and #2 are intended for sprinkler risers in vineyards where the head is several feet above ground level, and may be banded directly to the riser.

Style #3 is intended for use in orchards where the shield may be stuck in the ground. The legs are 22" long.
