# How to use Android tablet as a media player.

Start PHT Media server (if is OFF now). Go to "Play Store" from your tablet and search for "Kodi". Install it. There is no "Movies" folder on main screen. It has to be created. To create folder "Movies", go to Videos > Files >

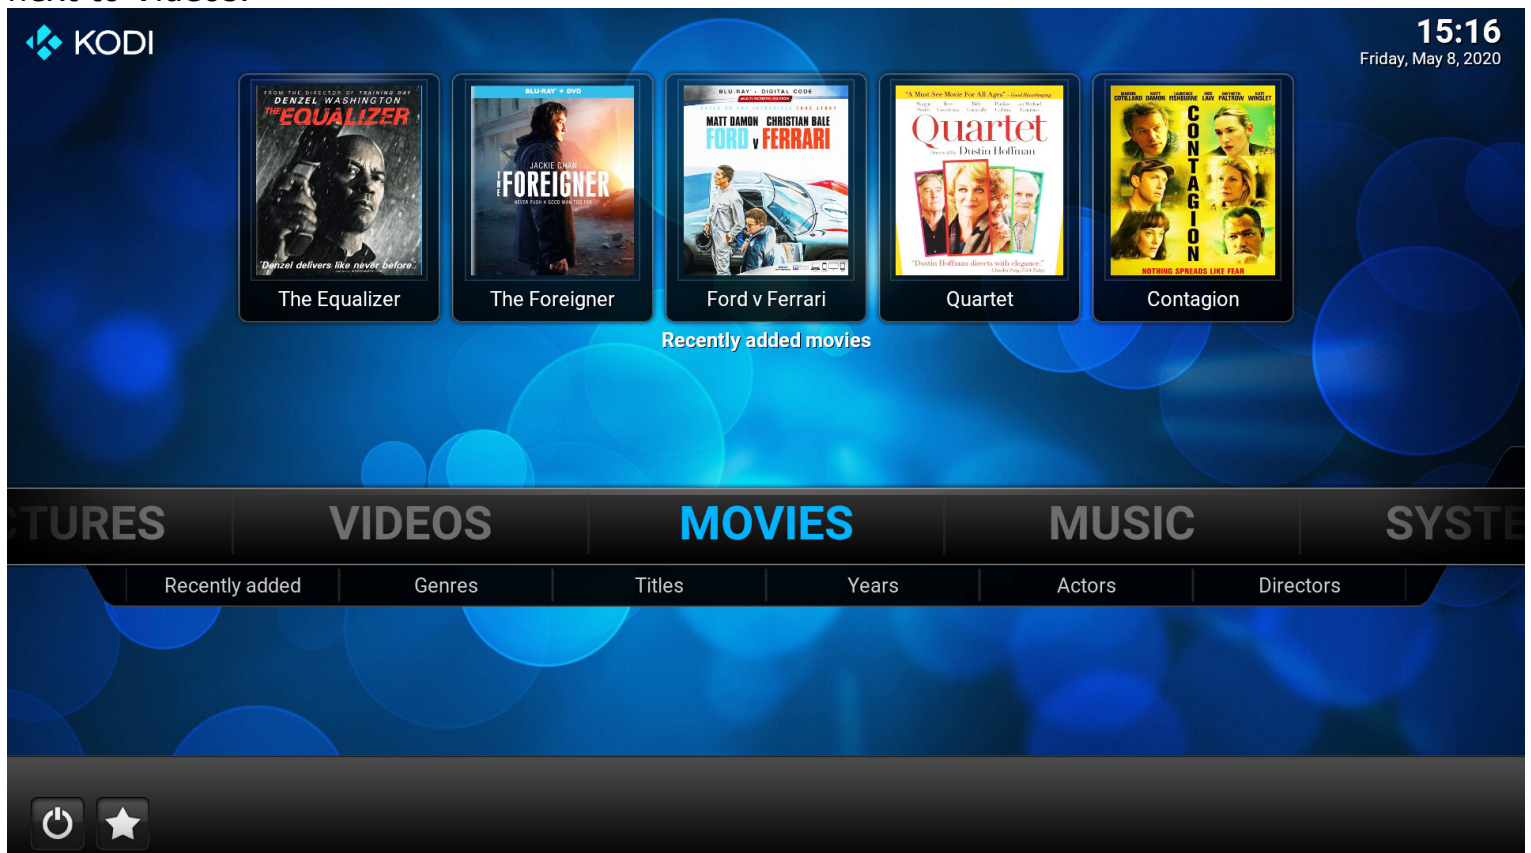

Add videos… > Browse >

Windows network (SMB) > choose network Workgroup, find PHT Media server and folder "Movies".

Press OK. Press OK again. Confirm that you want to add movies to your library. Choose Database for Movies and press OK. Go to main screen. You can see Movies folder next to Videos.
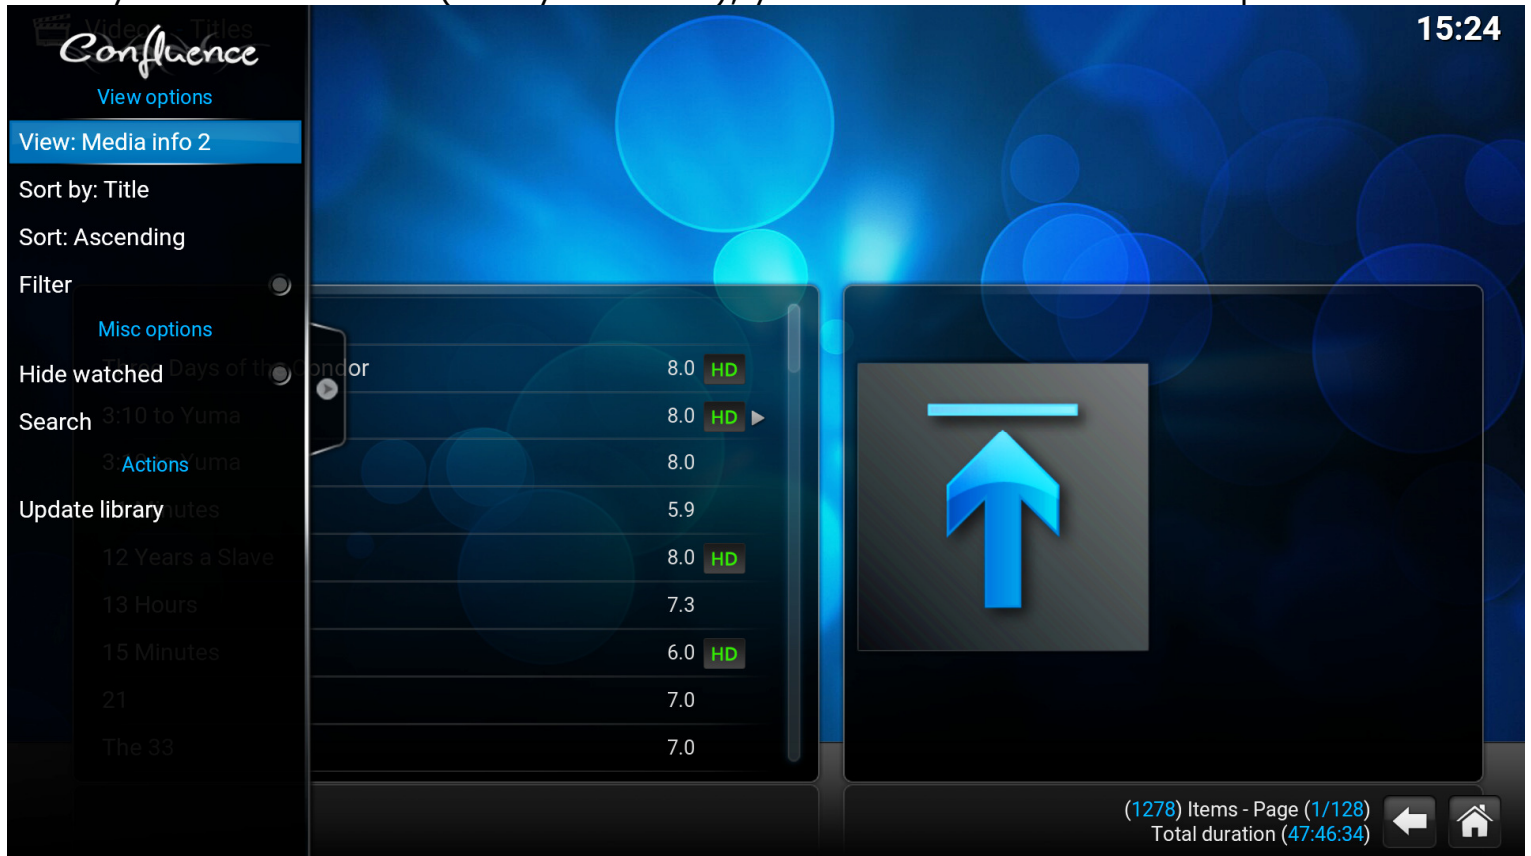

When you touch "Movies", you should see "Recently added movies" on the top.

Now you can choose one of 10 recently added movies. Or go down to tab "Recently added movies" to choose one of 25 recently added movies.
Or you go any other tab and filter movies by Genres, Title, Years etc.

When you click on "Titles" (or any other tab), you will see tab on the left. Open it.

Here you can change a view to one you like the best, choose how to sort movies etc.

Enjoy it.

Now go to Music > Files > Add music… > Browse > Windows network (SMB) > choose network Workgroup, find PHT Media server and folder "Music".
Press OK.
Press OK.
Confirm that you want to add music to your library.
Choose Database for music and press OK.
When you touch Music, you should see "Recently added albums".

To add pictures and your own videos, repeat above procedure.
Follow instruction on Kodi website how to set player up to your requirements.
