How to identify unidentified movies

When you have unidentified movies in Drop-n-Rip's Title Collection, your player may not see these movies at all or incorrectly identify them. To fix a problem:

Open Collection Management
When you see movie which is unidentified or not 100 completed, you can add missing info manually (if you have missing info handy) or semiautomatic – if you are sure which movie is it.
So:
Right click on movie title and click on Change Title Source and Data
Choose country of movie production
Chose Type and click search
You will see a long list of movies. You have to choose **correct one** and click Change. If you are not sure – you can preview info. **When you are sure – click Change**.
Movie will populate with new data, folders etc.

After you indentify all movies, you may update Meta-Data for all movies or leave it. Server will do it itself every 6 hours.
