Platelet Rich Fibrin – The Ideal Way To Maximize Grafting Results And Wound Healing

When **November 01, 2025**

8:30 AM - 4:30 PM (EDT)

Location The RLA Conference Center,
Cranberry Township

Spaces left 17

Registration

PRF Course - AGD/PAGD
Member – \$500.00PRF Course - Nonmember –
\$650.00[REGISTER](#)

Platelet Rich Fibrin – The Ideal Way to Maximize Grafting Results and Wound Healing with Dr. Leroy Horton

The world of biologics in oral surgery has exploded since the 1990's. Concurrently so has the world of natural medicine. Where these two worlds meet, autologous platelet products offer a natural boost to the body's natural healing capacity. Surgery relies on tried and tested protocols, and natural biologics have a wealth of literature support as well as clinical applications. From improved healing to enhanced materials handling, there is no reason not to incorporate platelet products as we care constantly seeking ways to increase our odds of success. We will cover the biology, literature support, and different uses of PRP (platelet rich plasma) and PRF (platelet rich fibrin).

Lecture Objectives:

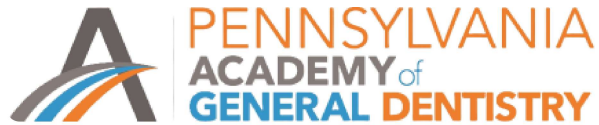

- Centrifuge concepts
- Review the history of platelet aggregates
- Discuss the biology of platelet aggregates
- Common uses
- Demonstrate the process of creating platelet products
- Clinical case examples

Hands-On Workshop:

- Hands on phlebotomy training and fabrication of PRF
- Use of PRF in model grafting exercise like D1 but with the use of "sticky bone"

AGD Course Code - 310 Oral and Maxillofacial Surgery

7.0 Credit Hours Available

PAGD's mission is to promote excellence and growth in dentistry through education and professional relationships. Our vision is to grow a community of general dentists who pursue more.
