

Pacific Lasertec Acquires Voltex, Inc.

November 23, 2022

Pacific Lasertec has completed its acquisition of Voltex, Inc., a Colorado-based manufacturer of high voltage power supplies for lasers and related applications. Voltex will operate as a wholly owned subsidiary, with ongoing design and manufacturing activities in Colorado Springs, CO.

According to Lynn Strickland, President & CEO of Pacific Lasertec “since its founding in 1993, Voltex has provided high voltage power supplies for a range of applications, but most notably for the operation of Helium Neon lasers. As the first laser technology to see commercial success, there continues to be a very solid demand for HeNe lasers due to their ultra-narrow spectral linewidth, outstanding beam quality, long operating lifetimes, and value price points. Strickland continues “many of our customers anticipate ongoing platform sales and support for the next 10 years or more, in applications such as interferometry, wavelength measurement and spectroscopy.”

Pacific Lasertec, founded in 2018, has quickly rocketed to a market leadership position, with shipments approaching 1,500 units per month. The addition of its own power supply manufacturing capability uniquely positions the company for long-term consistency in supply.
