

Build EZ System Releases the Modern Solution for Construction Project Management

[GetNews](#) - Wed Aug 7, 11:50AM CDT Contributor Content

Build EZ System, LLC takes construction project management to the next level with its innovative and user-friendly system for contractors and home builders.

One of the major functions of a construction company is managing building projects. This involves numerous tasks and responsibilities and, depending on the size and complexity of

the project, often takes a full team of professionals. The common objective is to complete the project in accordance with the plans, on time, and on budget.

Keeping a project on time and on budget is easier said than done. A typical construction project involves many components of labor and material. These components can involve hundreds of subcontractors and employees who need to work together toward this objective. In the old days, project management required numerous computers, servers, printers, filing cabinets, spreadsheets, and a lot of ink.

Traditional Project Management Software and Apps

With the advent of the internet and cloud servers, things changed. In the 2000s, cloud platforms were designed to centralize data without the need for external servers or expensive hardware. This gave rise to construction project management software. Tech companies combined basic project management tools and templates and began selling them on a subscription basis.

Project management software and apps for home builders and contractors have been on the market for years. They are all different and some are more advanced than others. As a baseline, they are mobile and have generic tools and templates for basic tasks like creating schedules, owner updates, and budgets.

The Build EZ Solution

Scott Moeller, CEO and founder of Build EZ System, LLC, has been involved in the building industry for decades, as a developer, contractor, project manager, and attorney. His experience covers residential and commercial projects from small to large. He explains why he decided to pursue development of the Build EZ System. "I saw a real need in the construction industry for a truly complete and integrated project management system. One that is easy to use and that saves contractors time and money. Contractors are busy people. A product does not help if it takes additional time from their day to use it. They need a tool that helps do the work for them."

Moeller and his team embarked on this mission in 2022. Nearly two years later, the system is complete, fully quality tested, and released for purchase. "It took a long time, but turned out better than originally planned", he said. "We were able to create new efficiencies using features like AI, doc create, e-sign, and proprietary innovations that take PM functionality to a much higher level. Our system is more organized, more efficient, easier to use, and more complete than traditional construction project management apps."

The Build EZ System includes all the traditional project management functionality like scheduling, updates, owner selections, and punch lists. As an added feature, project owners can review and approve these tasks in real time in an optional owner interface, a feature that curious and eager owners would likely find appealing.

Beyond the traditional functions, the Build EZ System includes a cost center that empowers users to manage project cost items. Users can perform critical tasks like track proposals, create project budgets, approve work orders and cost items, approve invoices, and create detailed pay applications and cost summaries.

“What makes our system truly unique is the completeness of its functionality and high degree of automation.” Moeller continued, “We have an interactive feature for users to create, review, and e-sign top-tier contracts and other essential documents instantly from the field. This is one example of our innovative functionality that sets us apart from traditional software and apps for construction management.”

There are several different monthly and yearly subscription plans available for the Build EZ System. The differences are based on the number of company users and active projects. Because companies are paying for a complete system, the functionality is the same for all plans, and the plans do not charge for owner users or archived projects. buildezsystem.com/pricing.

Moeller was enthusiastic about the response the company was receiving since the release of the Build EZ System in June. “I think builders are seeing that we finally bridged the delta between traditional construction project management software and modern technology. We have given them a true all-in-one tool that helps them significantly reduce the time and effort that goes into project management. It also saves them a ton of money. This is something really important today with the building market slowing down in many regions.”
