Report on 2024 Community Healthcare Needs Survey

Wheeler County, Oregon and the catchment area for Asher Community Health Center are a microcosm for the rural healthcare difficulties experienced in the USA currently. According to Rural Health Information Hub¹, the nationwide barriers of workforce shortages, family finances, transportation, health literacy, and concerns with privacy and quality care are not unique to our frontier-rural locale. All over the USA, towns struggle like we do.

•

There were also two unexpected events that could have an effect on local health and medical care:

What did we seek to learn from our 2024 Survey?

About those who responded:

Is your PCP with Asher? If not, why not? Why seek healthcare outside County? Do you face discrimination, or other limiting factors? What chronic conditions do you struggle with? Do you feel isolated? What resources would help you the most?

Social Determinants of Health: Financial strain or difficulty? Food availability or insecurity? Transportation? Secure place to live?

Are you getting needed help for Mental Health? Substance abuse?

Are you receiving help needed for:

Medical care? Dental care? Medications? ... If not, why not?

What is the community perception of Opioid or other pain medication abuse?

Community perception of Emergency event resources? Emergency care and Ambulance services?

What are their overall healthcare concerns?

What do they want to see in the future to improve wellness, personal health, and local medical care? • Lone Rock Fire (137,000+ acres burned; activated Level-3 evacuations in Wheeler County), and

• Local ambulance suspends EMS response (at the time of this report, the City of Fossil Volunteer Ambulance has suspended operations until additional medical crew can be solicited and trained)

So this year, survey respondents were given an opportunity to comment about local medical/ healthcare services during an Emergency Event, and also to share their thoughts about local Ambulance services. (See comments in Addendum B.)

This 7-page summary report covers highlights only, and is not meant to replace your own review of the complete information.

Addendum A – quick list of the survey's Q&A choices

• Addendum B – this is the full data collected from all respondents; each question with answer-data (numbers/ percentages) *plus* the extra comments shared (*if the survey was signed, that name was not included; other names are intact*)

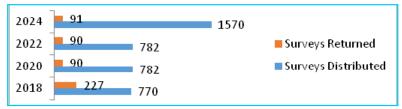

2024 survey time-line & details

• July 2024: Survey design and creation

• August 2024: (1st - 5th) Posters, press releases (ACHC website; Times-Journal) – online survey launched; 1570 USPS surveys mailed (to all of the postal patrons in Wheeler Co., Condon, Kimberly, Monument)

• Deadline was Aug. 15th but <u>all</u> surveys received through Aug. 26th were included in data and report

Total survey responses received: 91 – (14 online; 77 print)

Additional 2024 survey considerations:

All handwritten paper-survey responses were carefully entered into the database for complete and consistent data analysis
15 respondents signed their name to the survey (2 said "No ACHC follow up or contact") – An 'outreach list' is being provided to ACHC administration for follow up

1

Answer Overview - what can we learn?

Of those who responded to Q22 in the survey, 49% indicated "yes", they are using ACHC as their PCP (primary care provider). Compared to 2018: 83%; 2020: 66%; 2022: 44%

Biggest reason for obtaining care outside of Wheeler County? (Q23) Primarily to get care they can't get locally (51%). With our frontier-rural location, it seems there will always be a need for travel outside the area for specialty care and higher-level medical services.

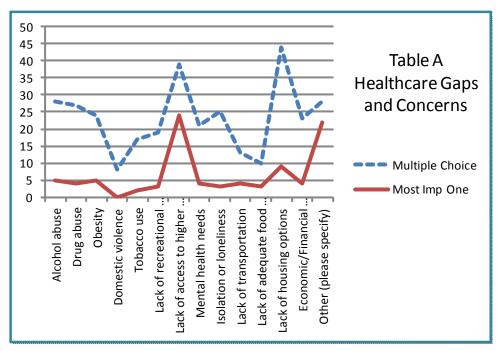

What do respondents see as barriers to healthcare, such as discrimination (gender, race, ethnicity, sexual orientation, income, education level), or limiting factors (age, disability, remote location)? (Q24)

The answer, "Residing in a remote rural location" was once again the top reason given, at 26%. And 70% said they didn't perceive any limitations, or they felt the question didn't apply to them.

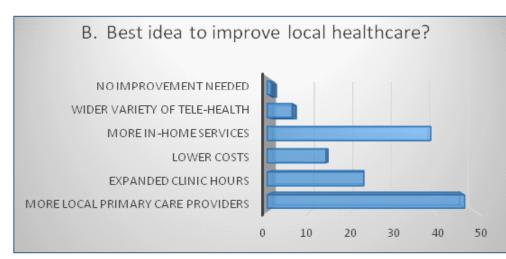

Current Serious Concerns:

What do respondents see as the most serious local healthcare gaps and concerns? We ask this question two ways – and start with a 'big net'. We give a list of common concerns and allow for multiple affirmative answers. Next, we asked them to drill it down to one single concern. (Table A) Q1 and Q2

It lends credibility to the answers when we see how the lines parallel each other. "Lack of housing options" and "Lack of access to higher medical care" are clearly seen as the highest concerns.

When allowed multiple answer-choices, "Lack of housing options" was the top answer. However, its interesting to note that when asked, 'Do you have a secure place to live?' in Q19, 100% of the people who responded to that question (85 people) all said YES.

What's needed – ideas for the future

Q3 ~ When asked to give their single best idea for improving access to healthcare locally, respondents gave the top ranking to two clear leaders: "More Primary Care Providers" (63%), and

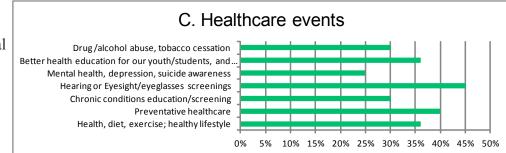

"More in-home services" (45%).

Its also interesting to note one comparison here: Respondents

felt that "Expanded clinic hours" was a more important issue to address than having "Lower costs". (Table B)

Public Healthcare Events

Q4 ~ And what county-wide healthcare events and educational resources do respondents feel are most needed? "Hearing and eyesight screenings" are once again a clear standout, but this year respondents also gave higher marks to better

health education for youth, for preventative education and healthy lifestyle. Does this mean our current local population might be more receptive to learning healthy lifestyle changes? (Table C)

Getting the care needed? And if not, why not?

In Table D, we seek to understand possible gaps in various areas of local health care that impact our residents: Medical care, dental care, medications, and mental health. (Q7-9-11-13)

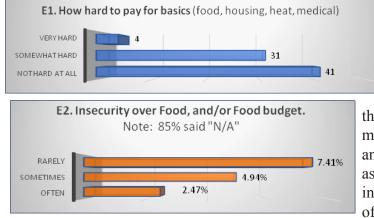

Table D.	Top Barrier chosen	2nd barrier chosen (if tied, 2nd/3rd)	
Medical Care	Couldn't get a timely appt at ACHC	Couldn't get transportation to ACHC	
Dental Care	Costs too much	Couldn't get a timely appt at ACHC	
Medications	Couldn't get script delivered to home	Tied: High cost, and couldn't pick up script	
Mental Health Costs too much		Tied: Couldn't get appt, and didn't believe	
		they needed help	

mental health. (Q/-9-11-13)

Social Determinants of Health (SDH or SDoH)

The E Tables take a quick look at the gaps in social/ environmental needs of the respondents. Social determinants of health can have a significant yet hidden impact on a person's ability to improve their health.

Identified as a "Priority Area" in Healthy People 2030² (US Dept. of Health and Human Services), SDH is seen as "the conditions in the environments where people are born, live, learn, work, play, worship, and age

that affect a wide range of health, functioning, and quality-of-life outcomes and risks." SDH can be grouped into 5 domains: Economic, Education, Access to Quality Health Care, Neighborhood and built-environment, and social-community context. This is where we recognize the importance of

the questions about food insecurity, having enough money to pay for the basics, transportation, loneliness and isolation, and barriers to medical care such as discrimination. These factors are known to be incredibly important to health and wellness for a person of any age, **F3**. Do you have a lack of transportation?

but older adults can be especially vulnerable. To have a better sense of the depth of the questions and comments, review full data in Addendum B. (E1-2-3 are from Q18-20-21)

E3. Do you have a Lack of Transportation?	
No	88%
Yes, but not to critical things	6%
Yes, to critical appts and things	4%

Isolation and loneliness

As indicated above, this is a very important SDH consideration in our remote region. Do our constituents feel cut off or isolated? Do they wish they had more opportunities for social activities?

No: 71% Yes: 29% (an increase from the 22% reported in the 2022 survey)

² https://health.gov/healthypeople/priority-areas/social-determinants-health

Pain medication / Opioid Misuse

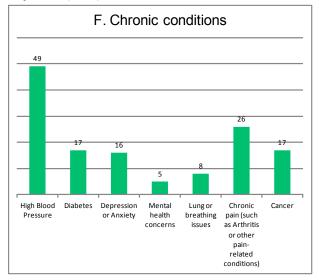

According to the National Institute on Drug Abuse, the 2023 rise of illicit fentanyl is both dangerous and dramatic³. *(see table at right)* And the Oregon Health Authority reports 1392 unintentional opioid overdose deaths* in 2023, *(*with final numbers potentially higher once all the data is in)*. The 1392 deaths are a substantial increase from 280 deaths in 2019⁴.

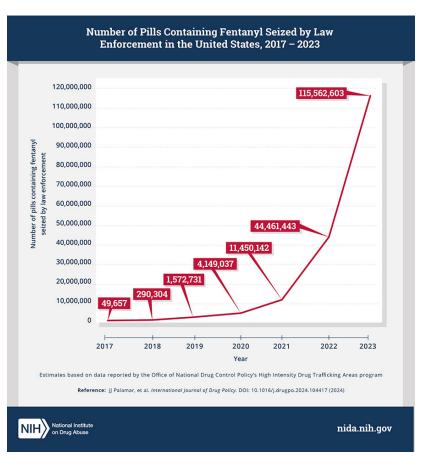

This year, 89% of our respondents said "no" to Q14, "Do you, or does someone you know, struggle with prescription pain medication or opioid medication use?"

Opioids include prescription opioids (natural and semisynthetic opioids and methadone), heroin, and synthetic opioids other than methadone (primarily fentanyl).

Self-assessment, Mental Health

72% of respondents said "not applicable" or "only once or twice" were they bothered by feeling down, depressed or hopeless. Another 22% said "occasionally". Only 6% were feeling down, depressed or hopeless as often as "every day; more than half the time; or several days". (Q15)

Physical, Mental, Emotional problems limitations?

Most respondents (74%) don't feel they are limited by physical, emotional or mental problems (Q16).

Chronic Conditions

Table F (Q5) looks at the diagnosed chronic conditions reported. Topping the list is High Blood Pressure, or hypertension (HTN). Called the "silent killer" because it often has no symptoms, can go undetected for a long time, but all the while is harming organs and health. HTN can quietly damage blood vessels, cause heart disease, heart failure, stroke, kidney disease, vision loss, and more. Do these conditions align with proposed new regional projects? With healthcare Providers' priorities for patient education?

Comments on Emergency Events (wildfire, flood, damaging storms)

New within this 2024 survey was the opportunity for respondents to comment on health and medical resources during local emergency events - Q30. The opinions varied widely, from 'everything was great' to 'everything was bad'. There was a mention of Asher Clinic not being an additional resource during the Lone Rock Fire, but

https://nida.nih.gov/news-events/news-releases/2024/05/over-115-million-pills-containing-illicit-fentanyl-seized-by-law-enforcement-in-2023

⁴ https://www.oregon.gov/oha/PH/PREVENTIONWELLNESS/SUBSTANCEUSE/OPIOIDS/Documents/quarterly_ opioid_overdose_related_data_report.pdf

there were also comments of appreciation to ACHC that Asher Clinic continued to operate during the wildfire. All of the individual comments are shown in Addendum B, Q30.

Is Ambulance Response a critical health care service?

Another new comment opportunity was, "Do you consider local emergency ambulance response to be a critical healthcare service?" This was added as an opportunity to hear back on the issue of diminishing ambulance volunteers, and the potential loss of services. Online this was shown as a separate question (Q31), and written comments were included in the database here when they spoke specifically to the Ambulance Services subject. However, you will find *many* references to the fear of losing local EMS / Ambulance throughout the other survey question's responses and comments.

Is Ambulance considered a critical healthcare service? Of 35 responses: 100% "yes" - (zero "no"; zero "unsure").

Final Additional Respondent Comments, Q33

Question 33 was the spot to add a respondent's final comments online, but also a place to add extra handwritten comments provided on paper. It is also the place to add 'clarifying comments' for certain specific questions (example: Q29 has no 'comment box' and is just a 'yes-or-no' answer, but if those questions had a handwritten comment, it was added here with the question number was identified).

Medical Resources and Care Gaps

<u>Resource</u>: Asher Community Health Center (ACHC), FQHC (Federally Qualified Health Center), with 3 clinic locations in the catchment area: Fossil, Spray, and Mitchell. Each location has medical services as well as dental services. Physical Therapy is available at Fossil ACHC.

<u>Resource</u>: Emergency medical services: Spray Vol. Ambulance; Mitchell Vol. Ambulance; Fossil Vol. Ambulance.

<u>Resource</u>: Hospitals & Emergency Departments located in The Dalles, Madras, Redmond, Bend, Prineville, John Day, and Heppner.

<u>Care Gaps as of August 2024</u>: There are no local Hospice or Home Health programs; no Community Paramedicine/Mobile Integrated Health program; no X-Ray imaging services currently at ACHC. Currently Fossil Vol. Ambulance is out-of-service awaiting additional medics.
