# LONE STAR

## *Historic Howell Ranch*

Friends and Fellow Cattlemen:

We are excited to be hosting our thirteenth Spring Bull Sale. This year's sale will be on Thursday, March 13th, at Noon at the Cooke County Fairgrounds.

The Lord teaches us to be thankful in all things. Over the winter, we have had helpful rain and snow. I am looking forward to green pastures. Cattle prices are very good, and I expect several years of good cattle prices going forward.

Here at Lone Star Angus, we consider ourselves fortunate to have long-standing relationships with customers who show their continued support by buying our bulls yearly. Thank you for your support which has put us where we are today.

I would like to offer sincere thanks to Joe Bob, Russell and Jaxsyn for having the bulls in excellent condition. It is indeed satisfying to see the continued improvement in phenotype. Our focus on marbling is paying dividends as the marbling EPDs have really climbed. Every bull in the sale is in the Top 40% of the breed for Marbling with most in the Top 20%. Retaining ownership of these genetics will increase your profitability.

If you have any questions about the sale or our ranch program, do not hesitate to call , 940-367-0064 or stop by. We would love to show you our cattle!

Sincerely,

*Margaret Howell & Rodney H Howell*

# Spring Bull Sale THURSDAY, MARCH 13, 2025

COOKE COUNTY FAIRGROUNDS, GAINESVILLE, TEXAS • 12:00 NOON

1901 Justice Center Blvd, Gainesville, TX 76240

## AUCTIONEER

Matt Sims

## ASSOCIATION REPRESENTATIVES

Radale Tiner, Regional Manager, American Angus Association

Steve Zybach, President, Texas Angus Association

## LIVESTOCK PRESS REPRESENTATIVES

Radale Tiner, *Angus Journal*

Phil Stoll, *Weekly Livestock Reporter*

Colton Pratz, *Oklahoma Cowman*

*Buyers unable to attend the sale may send their bids to the Regional Manager, Ringmen or Auctioneer.*

## SALE LOCATION

Cooke County Fairgrounds, 1901 Justice Center Road

*The fairgrounds are located on the north side of US Hwy 82, 0.7 miles west of the intersection of I-35 and US Hwy 82. From I-35, Exit 498 toward Wichita Falls. Wheelchair accessible.*

## ACCOMMODATIONS

La Quinta 940-665-5700

Comfort Suites 940-665-0505

Holiday Inn Express 940-665-5000

## AIR TRANSPORTATION

The Dallas-Fort Worth Airport (DFW) is served by all major airlines. Gainesville is located 60 miles north of DFW on I-35.

## SCHEDULE OF EVENTS

Please see complete schedule of events on page 2.

## VIDEOS OF SALE OFFERING

Videos of the sale offering available online at [www.liveauctions.tv](http://www.liveauctions.tv). Videos and sale book also available at [www.lonestarangus.com](http://www.lonestarangus.com).

## HEALTH

Cattle will be accompanied by proper health certificates for immediate interstate shipment.

## INSPECTION OF CATTLE

Cattle will be available for inspection beginning Wednesday, March 12, at the sale site. All cattle will carry identity tags corresponding to sale lot numbers in the sale book.

## TERMS & CONDITIONS

All cattle are to be settled for on sale day, PRIOR to load out. All cattle sell under the terms and conditions as recommended by the American Angus Association.

**NO LOAD OUT UNTIL AFTER THE SALE. All cattle must be picked up by noon on Friday.**

## ANNOUNCEMENTS

A supplemental update sheet will be available sale day with up-to-date information. All supplemental information and announcements made from the sale block take precedence over printed matter in this sale book.

## LIABILITY

All persons attending the sale and related functions do so at their own risk, legal or otherwise, for their safety or the behavior of the animals. Lone Star Angus and the sale facility assume no liability for loss or damages, however so caused.

**ANGUSMEDIA™** EPDs contained in the hard copy of this sale book were current as of print date. Digital versions of this sale book can be viewed online at [www.angus.org](http://www.angus.org) and will have EPDs updated every Friday with the exception of EPD references in footnotes and photos. Any PDF downloads from the website will contain EPDs current as of the date downloaded. References: American Angus Association®, AHIR®, AngusLink®, CAB®, Pathfinder®.

**SALE DAY PHONES** Rodney Howell 940-367-0064 • Nate Martin 940-902-5179

Visit [www.lonestarangus.com](http://www.lonestarangus.com) and view this sale book and videos of the sale cattle online.

References: American Angus Association®, AHIR®, AngusLink®, CAB®, Pathfinder®.

## SCHEDULE OF EVENTS

### WEDNESDAY, MARCH 12

All day Cattle available for viewing at the sale facility

### THURSDAY, MARCH 13

8:00 AM Coffee and Donuts

All day Cattle available for viewing at the sale facility

11:00 AM Complimentary lunch served at the sale facility

12:00 PM LONE STAR SALE

## SALE ORDER

Cattle will sell in sale book order.

## SEMEN INTEREST

Lone Star is retaining one-third, revenue sharing, semen interest in all bulls selling, unless otherwise noted.

## FREE DELIVERY

Free delivery with a \$7,500 purchase of registered cattle within 300 miles.

## BREEDING SOUNDNESS GUARANTEE

Lone Star guarantees the fertility of our bulls for one year from the date of purchase. If a healthy bull fails two fertility exams, a credit for the purchase price minus salvage value will be available at our next sale.

## ABOUT THE BULLS

All bulls were born in the spring and fall 2023 and are ready for heavy service.

## STAR RATINGS

Lone Star has provided a star rating system in this year's book for assistance with your bull buying decisions.

### CALVING EASE:

Our star system for calving ease is designed to make purchasing bulls for first calf heifers and mature cows easier. I evaluated the EPDs: CED and BW, the pedigrees, actual birth weights and the physical appearance of the bulls to arrive at a rating.

**5 Star calving-ease bulls** should be very small and give normal delivery. There is not much chance of problems.

**4 Star calving-ease bulls** are what we are trying to raise. These bulls will work great on first calf heifers and mature cows. We have avoided for generations rough boned AI sires and used sires that have nice little Angus heads. The shape of the calf is almost as important as the weight.

**3 Star calving-ease bulls** could be used on large or crossbred first calf heifers but should be monitored closely.

**2 Star calving-ease bulls** will work great on mature cows. I have never had a customer with a calving problem on mature cows. There is some correlation between higher birth weights and higher weaning weights.

**1 Star calving-ease bulls.** We do not raise bulls that cause calving difficulty in grown cows.

## UPDATED EPDS AND VIDEOS

Updated EPD spreadsheet and videos of the bulls available online

[www.lonestarangus.com](http://www.lonestarangus.com)

---

## AMERICAN ANGUS ASSOCIATION GENOMIC ENHANCED EPDS

*Courtesy of the American Angus Association*

Genomic results are a way to enhance predictability of current selection tools, to achieve more accuracy on EPDs for younger animals, and to characterize genetics for traits where it's difficult to measure the animal's own performance for the trait, such as carcass traits in breeding stock or maternal traits in bulls. With the investment in genomic technology, this means that in addition to the pedigree, performance and progeny information that are used in the calculation and reporting of Angus EPDs, genomic test results have also been incorporated into the EPD.

Genomic-enhanced EPDs (GE-EPDs) are important because they make use of the results from the genomic, or DNA, test in addition to all other sources of information to provide added accuracy and reliability to the animal's EPD. In fact, depending on the trait, GE-EPDs on unproven animals have the same amount of accuracy as if they had already sired 8-20 calves.

In the American Angus Association genetic evaluations, the genomic results are incorporated into the EPDs as a correlated trait. Through AGI research and development, a genetic relationship is calculated between the values obtained from the genomic test results and the phenotypic data at the Association. Typically there are two measures used to report the relationship of a genomic test and phenotype, the genetic correlation and percent of additive genetic variance accounted for by the test. These two measures are related, and if one is known, the other can be calculated. The genetic correlation is the square root of the percent additive genetic variance and, conversely, the percent additive genetic variance is the squared value of the genetic correlation. For example, if the genetic correlation between the genomic result and the phenotypic measure is .60, then the genomic result explains 36% of the additive genetic variance for that particular trait. Simply stated, the more genetic variance a test explains, the more impact it will have on your EPDs and accuracies for that trait. Across all traits, the genetic correlations that have been estimated between the high density genomic tests purchased through AGI and the American Angus Association's phenotypic database effectively ranged from .60 to .70, except for milk and heifer pregnancy.

Genomic results are used as indicator traits in the evaluations to compute EPDs. Genomics do not completely describe the variation in the traits of interest. Breeders sometimes ask if it is no longer necessary to collect weights and measures (e.g., weaning weights, scan data, carcass measures). On the contrary, phenotypic measures collected by Angus breeders continue to be an important part in further development of improved genomic panels and the refinement of this technology over time, not to mention an important component in EPD calculation.

Genomic results are a way to enhance the current selection tools, to achieve more accuracy on predictions for younger animals, and to characterize genetics for traits where it's difficult to measure the phenotype. To learn more about available genomic tests, go to <http://www.angus.org/AGI/default.aspx>.

**Save the Date - Registered Female Sale May 17, 2025 • Annual Fall Sale October 23, 2025**

**VIDEOS OF EACH LOT WILL BE BROADCAST RINGSIDE -  
NO LIVE CATTLE WILL BE BROUGHT TO THE RING. ALL CATTLE WILL BE ON DISPLAY,  
SO PLEASE COME EARLY TO VIEW THE CATTLE AND MAKE YOUR SELECTIONS.**

**REGISTER TO  
BID EARLY**

**LiveAuctions.TV**

**1**

### **CREATE AN ACCOUNT**

Click "Register to Bid" on the top right corner of LiveAuctions.tv. Fill out the required information to bid online. Agree to the terms of service and finish with the "register" button.

**2**

### **REGISTER FOR A BUYER NUMBER**

From the home page or the "all auctions" page, choose the sale you're interested in. Once selected, click the "request a buyer number" button. Verify your email address with the email verification link. To verify your mobile number, click "send token". Follow the steps to authorize your mobile device and click "submit".

**3**

### **BID SUCCESSFULLY**

You will only have to complete the two-step verification process one time. After that, you will be able to immediately request a buyer number on any auction without verification. If you're a winning bidder, your lots will appear in your cart on the bottom of your screen. You will be contacted by the ranch or sale manager for your payment and shipping plans.

**IF YOU NEED HELP REGISTERING TO BID OR TO VIEW  
THE AUCTION PLEASE CONTACT TECHNICAL SUPPORT**

Percentile Rankings

Lone Star "Star" Ratings

Expected Progeny Difference (EPD) is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

PRODUCTION EPDs

- Calving Ease Direct (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.
- Birth Weight EPD (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.
- Weaning Weight EPD (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.
- Yearling Weight EPD (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

MATERNAL EPDs

- Calving Ease Maternal (CEM), is expressed as a difference in percentage of unassisted births with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.
- Maternal Milk EPD (Milk), is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.
- Cow Energy Value (\$EN), expressed in dollar savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals (more dollars saved on feed energy expenses). Components for computing the cow \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

CARCASS EPDs

- Carcass Weight EPD (CW), expressed in pounds is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.
- Marbling EPD (Marb), expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.
- Ribeye Area EPD (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.
- Fat Thickness EPD (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

\$VALUE INDEXES

\$Value indexes, an economic selection index allows multiple change in several different traits at once pertaining to a specific breeding objective. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires if the sires were randomly mated to cows and if calves were exposed to the same environment. More Info

- Maternal Weaned Calf Value (\$M), an index, expressed in dollars per head, predicts profitability differences from conception to weaning with the underlying breeding objective assuming that individuals retain their own replacement females within herd and sell the rest of the cull female and all male progeny as feeder calves. The model assumes commercial producers will replace 25% of their breeding females in the first generation and 20% of their breeding females in each subsequent generation. Traits included are as follows: calving ease direct, calving ease maternal, weaning weight, milk, heifer pregnancy, docility, mature cow weight, claw set and foot angle.
- Weaned Calf Value (\$W), an index, expressed in dollars per head, to predict profitability differences in progeny due to genetics from birth to weaning. The underlying objective being producers will retain 20% of the female progeny as replacements and sell the rest of the cull females and their male counterparts as feeder calves. Traits included are as follows (in no particular order): birth weight, weaning weight, milk, and mature cow weight.
- Feedlot Value (\$F), an index, expressed in dollars per head, to predict profitability differences in progeny due to genetics for postweaning feedlot merit compared to the progeny of other sires. The underlying objective assumes producers will retain ownership of cattle through the feedlot phase and sell fed cattle on a carcass weight basis, but with no consideration of premiums or discounts for quality and yield grade. Traits contributing directly to the index are as follows: yearling weight (gain), carcass weight and dry-matter intake.
- Grid Value (\$G), an index, expressed in dollars per carcass, to predict profitability differences in progeny due to genetics for carcass grid merit compared to progeny of other sires. The underlying objective assumes producers will market cattle on an above-industry-average carcass grid. Traits included in the index are as follows (in no particular order): carcass weight, marbling, ribeye area, and fat.
- Beef Value (\$B), a terminal index, expressed in dollars per carcass, to predict profitability differences in progeny due to genetics for postweaning and carcass traits. This terminal index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot phase and market these animals on a carcass grid. Traits included in the index are as follows: yearling weight, dry-matter intake, marbling, carcass weight, ribeye area and fat.
- Combined Value (\$C), an index, expressed in dollars per head, which includes all traits that make up both Maternal Weaned Calf Value (\$M) and Beef Value (\$B) with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and sell them on a quality-based carcass merit grid. Expected progeny differences (EPDs) directly influencing a combined index: calving ease direct (CED) and maternal (CEM), weaning weight (WW), yearling weight (YW), maternal milk (Milk), heifer pregnancy (HP), docility (DOC), mature cow weight (MW), foot angle (Angle), claw set (Claw), dry matter intake (DMI), marbling (Marb), carcass weight (CW), ribeye area (RE) and fat thickness (Fat).

# LONE STAR

## *Historic Howell Ranch*

My great, great grandfather, Robert Dillard moved to Cooke County in 1859. He purchased the land surrounding our ranch headquarters in 1861. His log-cabin house sat where my home sits today which was constructed in 1919 by my grandfather, Boss Houston Howell. In 2011, our family was honored by the Texas Family Land Heritage program for 150 years of continuous agricultural production.

As with every ranching family, there are several stories I could tell but I will share one. My grandfather, Boss Houston Howell, saw a business opportunity during World War I. They were

trying to farm in the Texas heat with horses. He went to Mexico and bought the biggest jack he could find and began raising mules. After the war, a good set of broke to plow mules would bring \$200 dollars. Land was about \$15 per acre. I doubt that breaking young mules to plow was fun work but it allowed him to buy out the other family members and double the acreage. I returned to the family ranch in 1976 after receiving an undergraduate degree in Mechanical Engineering from Southern Methodist University and an MBA from North Texas University. At that time, we ran commercial cows and grew wheat, oats, soybeans, and hay crops. I was extremely blessed to spend most of the next two decades working with my father, Houston Howell, first as his helper, then as a business partner and later acquiring the business. The memories I have and the knowledge he imparted are priceless.

I married Margaret Davidson in 1981. We are blessed with two fine sons, Brett and Brady Howell. We started Lone Star Angus in 1986 with the purchase of three cows. Our business expanded into yearlings and for two decades we maintained ownership of some of these cattle through the feedlot.

As the Angus herd grew, our other enterprises fell by the wayside. Lone Star currently has 450 grown Registered Black Angus cows and 8 Registered Polled Hereford donor cows. All our forage is marketed through our cattle. Our 13th Spring Bull Sale will be held on March 13, 2025. Please also join us for our Registered Angus Female Sale on May 17, 2025. Our 7th Fall Bull Sale will be in Gainesville, Texas, on October 24, 2025. We will be selling both registered Angus bulls and commercial females in October.

In the pursuit of genetic excellence during each breeding season, we implant about 250 embryos, artificially inseminate heavily, and use natural service for a short period at the end of the breeding seasons. We use proven bulls on the majority of our pairings and require calving ease, explosive growth, high marbling, docility, good udders and structural correctness. We are blessed with a wonderful group of repeat customers and look forward to serving all of our bull and female customers in the future.

## *Our Historic History.*

# The Cattle Business Today.

I am reluctant to write this letter for fear I will be classified as an old timer but after 49 years making a living in agriculture, I am going to share my point of view.

There are lot of old sayings in the cattle business. Some are eternal truths and some are misguided or outdated. I am going to list a few.

I just have 20 cows so I don't need a good Bull. With 500 pound calves bring about \$3/pound let's do the math. An excellent bull will add 50 pounds to your calf crop.  $50 \times 20 \times 3 = \$3000$  per year in increased revenue. Assuming you have good fortune and he services your cows for 5 years which most Lone Star Angus bulls will do.  $5 \times 3000 = \$15000$ . What is the price difference between a decent bull and a great bull?

I don't need Marbling, I sell my calves at the sale barn. This is the communications age. A cattle buyer purchases your calves at the sale barn, they have no health problems and excellent gain on wheat. What happens, the yearling operator tells his buyer, buy those calves next year. Have you ever been in a sale barn and some calves that look just like yours bring 10\$/hundred more than yours. Wonder why?

You sell a set of yearlings. A buyer purchases them for a feedlot. They exhibit a great rate of gain, low cost of gain and a high percentage grade upper choice and prime. Does the feedlot operator want your yearlings next year? Of course, they made a bunch of money from the genetic quality of your cattle. Yearlings with a large spread between Weaning EPD and Yearling EPD will outperform average cattle by a lot. American Angus has this figured out. High Yearling EPDs make everyone in the beef production chain money.

Ribeye EPD is an important factor in how cattle yield, grade and carcass value. Several current studies show a 2 or 3% correlation between Ribeye EPD and Red Meat Yield. All the Ribeye EPD tells you is how big the ribeye is. It is a valuable cut of meat but only a small percentage of carcass weight. Certified Angus Beef will not take a carcass if the ribeye is over 16 square inches. A lot of steers are being fed to 1700 and 1800 pounds and being rejected because of the ribeye being too big. You need to have room on the plate for the baked potato and green beans. My point is, at this time, breeding for bigger ribeyes is outdated and counter productive.

What makes a carcass more valuable? One thing dominates in grading. Marbling! There used to be a lot of talk about tenderness. We all hate to pay good money and get a tough steak. Current studies show that most highly marbled steaks are tender. American Angus does not have a tenderness EPD.

I sold one of my first bulls to Grady McElreath, after much discussion, he bought a good bull for \$2500. After the deal was done, he stated you should be able to sell 5 calves and buy a good bull. He had just sold some calves for \$500. He probably learned that 100 years ago as a young cattleman. Some things never change.

I like to buy bulls with very high yearling weights. I think Yearling Weight Ratio is an important tool in bull selection but big yearling weight are the result of excessive feed. I have over the last 38 years of bull sales had several cattlemen come to me with the same sad song. I bought this bull with this huge yearling weight and his hips or shoulders went bad the second breeding season. I called a customer that had bought 6 bulls from Lone Star Angus and 6 from another breeder. It had been about 5 years, I asked if my bulls were still breeding cows. He responded that all 6 of my bulls were still with cows but only one of the other breeder's bulls was still around. What shortens longevity in Bulls? A vet told me that with the genetics we currently have yearling Angus bulls on hot feed can gain 5 to 6 pounds per day. Sounds great, right. He then explained the problem. The skeleton grow faster than the cartilage in the joints. Fluid on the hocks, hip and shoulder problems are the results of very rapid growth. In my opinion, the skeleton on 12 month old bull is not designed to carry around 1400 pounds. Are most of the bulls you buy breeding cows at 8 years of age? Buy Lone Star Bulls and get a return on your investment. Ask my customers how long my bulls last.

One thing that has changed, large ranches are selling cooperator herd's bulls. It is a very successful business model. At weaning, 20 to 50 ranches bring their bull calves. The marketing ranch puts their name on the bulls, feeds and sells them. We are old school on this. We raise our bulls and sell them. If you buy Lone Star Bulls, you are getting Lone Star Genetics. Look at the name on the dam of a bull you are considering. If the dam and bull have the same prefix starting their name, the bull was raised by that ranch. Another approach is to ask the ranch what percentage of the bulls in sale did you raise?

This letter has gotten much longer than intended. If you have had the patience to read this, I sincerely thank you.

# MAKE YOUR CATTLE STAND OUT

You've made a significant investment in your genetics, but does the market recognize that? Stand out by differentiating our cattle with AngusLink<sup>SM</sup> programs: the Genetic Merit Scorecard<sup>SM</sup> and AngusVerified<sup>SM</sup>.

ANGUS LINK  
**GENETIC  
MERIT  
SCORECARD<sup>SM</sup>**

The Genetic Merit Scorecard gives buyers the confidence they need to pay more for your quality calves.

**ANGUS  
VERIFIED<sup>SM</sup>**

AngusVerified validates your calves are sired by registered Angus bulls and make your cattle stand apart from other black hides on sale day.

Users of AngusLink programs earn **\$13-15/CWT PREMIUMS** on average. Give us a call, and learn how to claim your competitive edge with AngusLink value-added programs.

**ANGUSLINK<sup>SM</sup>**  
VALUE ADDED PROGRAMS

**ANGUSLINK.COM | 816-383-5100**

The Genetic Merit Scorecard and AngusVerified are administered by IMI Global.
