- Your Simple Promissory Note
- Banking Information for Funds Transfer.

This program is a private loan among related or collaborative parties, and not a securities offering.

HEALTHCARE FOUNDERS FUND TRUST, LLC (HFFT)

BENEFITS OF YOUR SUPPORT – INFORMATION SHEET

HEALTHCARE FOUNDER'S FUND TRUST

GENERAL INFORMATION ABOUT THE FUND & PURPOSE

- HFFT (website link) is a fund assembled and managed to provide short term bridge funding to innovative emerging healthcare technologies and their projects.
- Because these are established technologies only trying to bridge the interim gap to cover new opportunity costs. The amounts needed are temporary and very small compared to the investment made during their development.
- The entity is set up in a Special Purpose Vehicle (SPV) format, with a Series LLC component to allow maximum flexibility for fund and project managers.
- The model structure has been used by Wall Street dealmakers for decades for early stage and bridge funding.

Benefits to the "LendVestor" – A small contribution, short term, high interest return "Lender", who has the upside benefits of an "Angel Investor" without the risk.

1. Funds are loaned via Promissory Note for a one-year term.
2. Funds are used for a pool of innovative healthcare technology companies and projects.
3. Simple interest of 3% is paid quarterly, for a 12% annual return, or,
4. One time interest payment at the end of the term at 15%.
5. Once a project reaches five times ROI, the quarterly interest recipient receives an additional 6% bonus and the one time,
6. The end-of-term interest recipient receives a 10% bonus.
7. This total return is 16% for the quarterly, and 25% for the annual participant.
8. HFFT and your note are secured by the companies' contracts, growing accounts receivable, and the assets of the company.
9. Like a line of credit, it can be rolled many times into successive projects for exponential benefits.
10. You may cash out or rollover your interest into a new term by your choice.

To qualify, these companies must need short-term funds in order to;

1. Execute and deliver on current or pending contracts.
2. Complete technology API (Application Programming Interface) for waiting clients.
3. Deliver positive cash flow in 90 to 180 days of funding.
4. Must return a ten-times ROI (Return on Investment) in the first year of funding.
5. Must be willing to provide a bonus when the project reaches five times ROI*.
6. Must pledge their contracts, accounts receivable and assets as loan security.

*Under the "Examples of Need" tab, you will see projects with 63, 40, and 96 times ROI.

For more information, please go to our website here, watch the cover video, and then click on the PDF Tour. Thank you!

This program is a private loan among related or collaborative parties, and not a securities offering.

WHAT EXACTLY IS HEALTHCARE FOUNDERS FUND TRUST AND HOW DOES IT OPERATE?

HEALTHCARE
FOUNDER'S FUND TRUST

PRECISION
HEALTHCARE COMPANIES

Though many might consider this a Special Purpose Vehicle (SPV), or an entity put together to manage several similar type sub-entities under one Managing Parter umbrella, we are really not that.

The main difference is that rather than seeking investment, we seek lending through small contributions via Promissory Note? Why? The bridge funding we seek for our Strategic Partners is a fraction of what they have already invested in by the company, and the result is exponentially greater.

For many decades Wall Steet dealmakers considered this to be an "Income Fund." So how does an "Income Fund" work?

One - Funds are received as a short term loan,
Two - Above market interest rates are paid quarterly or at the end of the one-year term,
Three – Includes easily achievable bonuses that significantly boost their already premium return,
Four – The opportunity to convert loan to equity or,
Five - May even offer an equity override just for participating, like Precision does.

Our "Healthcare Founders Fund Trust" is the "Managing Partner" over selected "Fund Managers" which bring vetted prospects for bridge funding under very specific conditions, management, and monitoring.

The "LendVestors", YOU, benefit as the "Lender" AND the "Investor" in or from a pool of very low risk ventures.

Through a Series LLC format, your individual interest belongs to a "Cell Entity" or "Series LLC Cell" which allows you to monitor your progress in the fund or any individual program, or programs that you have interest in.

MISSION

OUR fund will support hundreds of emerging healthcare technology companies to deliver on active or pending contracts, that will cash flow positively in 90 to 180 days because of YOU! We use a simple model that Wall Street dealmakers have used among themselves for decades. Let's act together and benefit the humanity that we serve in the process.

EXAMPLES

We say "low risk" because we only fund accounts secured by active or pending contracts, that will cash flow positively in 90 to 180 days. Your contribution is further OVER SECURED by its growing Accounts Receivable. Here are the Exponential Financial Benefits!

1. Our sample situation company, Precision Healthcare Technology last year had a contract for 409,000 patients that would drive $15.7 million in revenue beginning in 90 days. We couldn't raise $250,000 by traditional means, hence this model. That's almost 63 times the ROI! The provider would have earned $48.13 million with no upfront or out-of-pocket costs and no change in workflow.
2. The first of the many hospital contracts already underway will generate $3.2 million for a further AI-Automation upgrade of about $80,000. That's a 40 TIMES ROI and the same process will be used for all future accounts! **We are paid weekly and received payment for the first 620 encounters in 13 days!**
3. An $80,000 security upgrade to match a large client's system identically will produce $7.69 million in revenue for a 96 TIMES ROI.

These opportunities are everywhere among our fellow technology partners that we work with and immediately provide joint access to new markets and clients. To learn more please go to our website here. Thank you in advance for getting off the sidelines and for your prompt and urgent assistance in spreading this message!

WANT TO BE A HHFT FUND MANAGER OR PRECISION STRATEGIC PARTNER? WE WOULD LOVE TO TALK!

WHY THIS NEED FOR THE HEALTHCARE FOUNDERS FUND TRUST?

HOW ANYBODY CAN BE ON THE GROUND FLOOR OF HEALTHCARE TECHNOLOGY INNOVATION!

Let's review the funding problems facing brilliant and innovative technologies and how you become the hero! Our sweet spot is $10K to $25K and you can even go together with friends to hit your target amount.

Unlike many technology platforms in development, we and our Strategic Partners fully own and operate our technology assets so we don't need or want "At Risk" or "Development Capital." However, we do have frequent "Opportunity Costs" of setting up our technologies to work together to service our paying clients.

This is not new - Many years ago the largest jean manufacturer in the world had a rolling line of credit secured by their contracts so they could afford to make their jeans and ship them to orders worldwide. They would be huge if only they could afford to make and deliver the product. The rest is history for Levi Strauss.

Like a real estate developer getting a construction loan, these "bridge loans" are lifelines for rapidly expanding healthcare technology companies. About 70% of the technology companies that we partner with have the same bridge needs for multiple projects that need to be acted on immediately. This is why you have an above-premium interest return and a significant additional bonus opportunity built in.

The good news is that these solutions can be used for every other client going forward. AND they don't need "At Risk" capital but rather secure these short-term loans with their contracts, growing accounts receivable, and their assets until we get our money back.

There is no shortage of real estate projects that suggest that you borrow against your savings or 401K, but these are extended exposures. We're not suggesting that you do that but ours are much safer!

HEALTHCARE
FOUNDER'S FUND TRUST

What's NOT safe even if you can get it?

1. Banks will not lend to early-stage projects or startups,
2. "Angel Investors" only participate in 11% of the projects vetted for them with a 14% success rate of getting their money back.
3. Venture Capitalists only fund 1% of their "Vetted Projects" and about 16% of that 1% even return their investment.

Our Solution - We are filling the black hole in project funding with a model that Wall Street dealmakers have used for decades. Please come join the club and a LendVestor, Fund Manager, or a company in need of bridge funds. Thank you!
