

HELP THE PLANET

MAYDAY

Portals and Human Union for Stop the Global Warming Now!!!

PRESS REPORT

Its publication is authorized by all digital and audiovisual media

Hello! I don't know who is on the other side. Global warming is out of control, it is accelerating. Between 2025 to 2030 a tipping point may emerge and positive feedbacks kick into domino. The worst that can happen to us is that the planet becomes totally uninhabitable, according to the extreme hypothesis of Dr. James Hansen, regarding runaway warming.

Since September 2022 I decided to act, I barely sleep. I am completing the matrices of the portal systems to attend to the planetary climatic emergency. If everything gets worse and you are the father of a family, I, you, everyone and your children have a high probability of dying from the effect of hyper-accelerated climate change.

During these months I have asked people if they want to save themselves from dying from global warming. They all say yes. When I ask them what they are willing to do, they all want to get paid for spending time on this cause. In other words, they want to be saved and at the same time get paid for it. That's too much!

If we all continue behaving like this, locked in our bubbles of greed and selfishness, we will end up worse than the Atlanteans, this time without an ark and without Noah. That is, no survivors.

It is not necessary to donate money. It's not all money. You can help and cooperate in many ways. Now the scientific report of the Gaia Team is urgently needed, to specify the next breaking point of the climatic anomaly. We are organizing gala dinners to raise

funds for this purpose. Participating in the organization of these events is one way to help.

Read the link and the full notes. <https://mayday.live/campaign-of-gaia-team>

If we don't cooperate with each other, we are doomed.

We are trying to organize three gala dinners in New York, Los Angeles and Washington, to raise funds for the Gaia Team science team. It is very important that celebrities support these events. Now I reiterate the information. Please read it.

The funds raised will be administered by American Bank directly.

Let me explain something to you, the recent IPCC report, which is very worrying, however it still does not take into account the impact of positive feedbacks in the domino effect of global warming. That is why the Gaia Team report is urgent. This is something I discussed with William J. Ripple (PhD) in 2020. I published a book on the subject. [Ripple now in 2023, together with Wolf and three US universities confirmed the risk of the potential of positive feedbacks to hyperaccelerate global warming](#). Other scientists are starting to join in. But we must act quickly, we have 2 to 5 years left to act and be able to avoid the worst, then the change will be unstoppable

[MASTEREARTH TO SAVE THE WORLD Chlatrate rifle active in 2025/30?: There is no time left to avoid catastrophe. Extreme measures would be applied](#)

Humanity is going through a deep crisis of growth accelerated by technological change, by Global Warming, by overpopulation, by ecological variations and by the potential for hostile alien intrusion before the end of the present 21st century. The best human resources must be brought together to as...

<http://gaia.team.greeninterbanks.com/scientist.htm>

I live in Argentina, we are proceeding with the registration of GSL Systems, or Global Solidarity as a corporation in the USA, our headquarters will be located in Columbia, Maryland

Thanks for reading. Now reflect on the information received

ADDITIONAL INFORMATION

[IRREVERSIBLE TURNING POINTS](#) Professor [Johan Rockström](#), Director of the Potsdam Institute for Climate Impact Research, and Dr David Armstrong McKay of the University of Exeter warn that giant ice sheets, ocean currents and permafrost regions may already be past the point irreversible inflection.

The collapse of the Greenland glaciers is in an active phase and accelerating with the current 1.1° C increase in global temperature. Ocean levels can rise rapidly.

The North Atlantic haline current may collapse, disrupting the rainfall cycles that billions of people depend on for food. Permafrost rich in carbon and methane gas can thaw abruptly. When the threshold of 1.5° C is reached, there will be changes in the vast northern forests and losses in almost all mountain glaciers.

The researchers indicate that the world is heading towards a warming of 2/3° C, which will activate 16 tipping points and others in cascade. With possible destabilization of the Amazon rainforest and its irreversible loss, affecting the climate of the entire planet.

When the threshold of 1.5° C is reached, there will be changes in the vast northern forests and losses in almost all mountain glaciers. The researchers indicate that the world is heading towards a warming of 2/3° C, which will activate 16 tipping points and others in cascade.

With possible destabilization of the Amazon rainforest and its irreversible loss, affecting the climate of the entire planet. The extinction of tropical coral reefs will also take place along with changes in the West African monsoon and the Indian summer monsoon, with likely loss of oxygen from the ocean.

In addition, the melting of the Antarctic glaciers will be accelerated.

THE FIRST 6 CLIMATE POINTS OF "NO RETURN"

- The collapse of the Greenland ice sheet.
- The collapse of the West Antarctic Ice Sheet.
- The collapse of the oceanic circulation in the polar region of the North Atlantic.
- Extinction of coral reefs in low latitudes.
- Sudden melting of permafrost (permanently frozen ground layer) in northern regions.
- Abrupt loss of sea ice in the Barents Sea.

HOPE

If the Gaia Team's scientific report confirms that we are close to a tipping point from which global warming hyperaccelerates, fear not.

I publicly warned about this situation in 2009. Nobody listened. In 2020 I wrote Masterearth. Nobody listened. Now we are in trouble, with a window of opportunity of only a few years to dampen the worst of global warming.

In these years I have had time to think about an Emergency Master Plan. At GSL Systems we are already working to fully activate it.

We must all work together, synchronized, cooperatively and in solidarity. Either we do or we may become extinct.

I am not saying that I am right, nor the absolute truth. I am working so that the Gaia Team scientists can get to work and measure the risk of the next tipping point, when positive feedbacks will kick in. When will this happen and how big will it be? Then we will all know what needs to be done and how to do it in the short and medium term. And I add that according to the prediction of the WMO in the next five years we will break the threshold of 1.5 to 1.8° C, with a 40% probability.

Thanks for read these message sir

Cordially
