MayDay.Live

NON-INVASIVE DIGITAL IDENTITY VERIFICATION OF PRIVACY THROUGH E-MAILS

MASSIVE AND INTERNATIONAL POPULAR CONSULTATIONS TO VOTE YES OR NO TO THE ADOPTION OF DIRECT DIGITAL DEMOCRACY, WORLD PARLIAMENT, SCIENCE COUNCIL AND PLANETARY PRESIDENT, WITHIN THE GLOBAL ECO GOVERNMENT SYSTEM.

The CEO of GSL Systems has decided to publicly launch the non-invasive digital identification system for the entire population connected to the Internet, using e-mail technology for this, under certain characteristics. This will allow users to be identified in a similar way to what the functional model of fingerprints does. The importance of this verification is similar to that of having a postal or physical address, that is, appearing within the legal system of transactions.

Through an alliance with Google, Microsoft, Apple or Goddady it is possible to quickly activate and implement the verification system. Which will be interconnected with all financial and electronic payment and collection operations.

Through Human-X phase I, it will be possible to carry out all the commercial and financial operations of each user, online or physical, regardless of the scale of the amounts involved. The device is highly secure against theft or loss, since it is activated by reading the DNA of the carrier subject. And avoid all possible tax evasion.

For the right to use this third generation of e-mails, users must pay US$1 per month. 50% or 50 cents will go to Mayday.live's humanitarian aid programs, with priority destination to Africa. The other 50% or 50 cents of the dollar is destined to cover operating and administrative costs, the rest is computed to benefits for the company that received the outsourcing of the service.

The multinational interested in this development, please make contact. If there is a void of bidders, GSL Systems will develop the system within a longer period.

VERIFICACION DIGITAL DE IDENTIDAD NO INVASIVA DE LA PRIVACIDAD MEDIANTE E-MAILS

CONSULTAS POPULARES MASIVAS E INTERNACIONALES PARA VOTAR SOBRE SÍ O NO A LA ADOPCIÓN DE LA DEMOCRACIA DIGITAL DIRECTA, PARLAMENTO MUNDIAL, CONSEJO DE LAS CIENCIAS Y PRESIDENTE PLANETARIO, DENTRO DEL SISTEMA DE ECO GOBIERNO GLOBAL.

El CEO de GSL Systems ha decidido lanzar públicamente el sistema de identificación digital no invasiva de toda la población conectada a internet, usando para esto la tecnología de los e-mails, bajo determinadas características. Esto permitirá identificar a los usuarios en forma similar a lo que hace el modelo funcional de las huellas dactilares. La importancia de esta verificación es similar a la de contar con una dirección postal o física, es decir figurar dentro del sistema legal de transacciones.

Mediante una alianza con Google, Microsoft, Apple o Goddady es posible activar e implementar rápidamente el sistema de verificación. El cual estará interconectado con toda operación financiera y de pago y cobro electrónico.

Mediante Human-X fase I, será posible realizar todas las operaciones comerciales y financieras propias de cada usuario, online o físicas, sin importar la escala de los montos involucrados. El dispositivo es de alta seguridad contra robo o perdida, dado que se activa con la lectura del ADN del sujeto portador. Y evita toda posible evasión impositiva.

Por el derecho al uso de esta tercera generación de e-mails los usuarios deberán pagar a razón de U$S 1 por mes. El 50% o 50 centavos de dólar serán destinados a los programas de ayuda humanitaria de Mayday.live, con destino prioritario África. El otro 50% o 50 centavos de dólar es destinado a cubrir costos operativos y administrativos, el resto es computado a beneficios para la empresa que recibió la tercerización del servicio.

La multinacional interesada en este desarrollo, por favor haga contacto. Si se produce un vacío de oferentes, GSL Systems desarrollará el sistema dentro de un plazo más largo.

Architect Roberto Guillermo Gomes, CEO founder of Green Interbanks, creator of the initiative. Leader of 2% For The Planet. Responsible for the sustainable projects area and financial

Gomes is currently studying 4 master's degrees and other courses online, so by the end of 2023 it will add 50 university and tertiary degrees. At the end of 2024, he is scheduled to start his first doctorate in Neuroscience, and then he will do another 3. In the remainder of his life, he plans, God willing, to add 100 degrees to complete his academic and scientific training.
