

Benefits of PivotTable

- PivotTable is a powerful tool to churn legions of data and extract meaningful information with few drag and drops.
- PivotTable helps you summarize data by categories and subcategories.
- You can group the data and perform descriptive analysis (Min, Max, Avg. Stdev, etc.)
- You can compare and contrast different sets of data with ease (% of row, % of column, % total etc).
- You can spin (pivot) data variables to see different summaries of the source data.
- Filtering, Sorting, Grouping, Conditional Formatting, and Creating charts are added advantage.
- Very importantly you don't need to memorize any functions or write lengthy codes. It's just few drags and drops.
