Dear Fr

#### RE: QUALITY OF THE BOREHOLE TESTED.

This is to notify you about the water from the three bore holes tested exhibited good physical chemical and bacteriological quality making them safe for human consumption. And I advise you to check the quality at least bi-annually since their quality are bound to change due to human activities in the surroundings and heavy rains since they are shallow wells.

The bore holes tested are in the villages of: -

1. Kitumbi
2. Nyankwanzi B
3. Kinyamangi

In Mabale Parish,kiwamba Sub county Kabarole District

Onencan John Paul
