

Operations Analytics

Enabling Insight Across Every Engagement

Consillium Group's Operations Analytics capability integrates data across ERP systems, planning tools, manufacturing systems, and spreadsheets to deliver decision-ready insight embedded into how leaders run the business.

What Operations Analytics Enables

 **Decision-ready visibility across Plan–Buy–Make–Deliver**

Clear, actionable insight into cost, capacity, service, and risk at the level leaders actually manage.

 **A single source of truth embedded in operating rhythms**

Performance visibility aligned to daily, weekly, and executive decision-making—not static reporting.

 **Faster, more confident decisions grounded in facts**

Reduced reliance on anecdotes, spreadsheets, and disconnected reports.

 **Sustained insight beyond the engagement**

Analytics that remain in place as a durable management capability, not a consulting artifact.

Where Operations Analytics is Applied

-  Operations Analytics underpins and strengthens Consillium Group engagements, including:
-  Diagnostic Assessments
-  Strategic Sourcing
-  Operational Due Diligence
-  **Process Capability Assessments** – maturity scoring, peer benchmarking, and value-based prioritization

How It Works

1. Data Extraction & Integration

We integrate data from ERP, planning, manufacturing, procurement, and spreadsheet sources into a reliable analytical foundation.

2. KPI & Data Model Design

Metrics are structured around operational decision-making and aligned to end-to-end process flows.

3. Power BI Dashboard Development

Interactive dashboards enable drill-down visibility from enterprise to site, product, supplier, or SKU level.

4. Activation & Capability Transfer

Analytics are embedded into daily, weekly, and executive operating rhythms and remain with the client as an ongoing capability.

Why Consillium's Analytics Are Different

 **Operator-Led**

Designed by leaders with real P&L, plant, and supply-chain operating experience.

 **Value-Integrated**

Directly reinforces Process Capability Assessments and value-creation priorities..

 **Built for Decisions**

Structured around the decisions leaders actually make, not generic reporting.

 **Embedded & Sustainable**

Integrated into operating rhythms and remains in place beyond the engagement.
