

RECORDER CONFIGURATION

Use the following steps to configure the recorder to start recording when it detects movement in it's field of view. This is after the system is operating and after the initial start up wizard runs.

If you are not seeing a full screen of the the camera double click anywhere on portion of the view to expand to full view.

Right click anywhere and select **MAIN MENU** and then **SELECT RECORD CONF.**

Make sure Channel 1 is selected

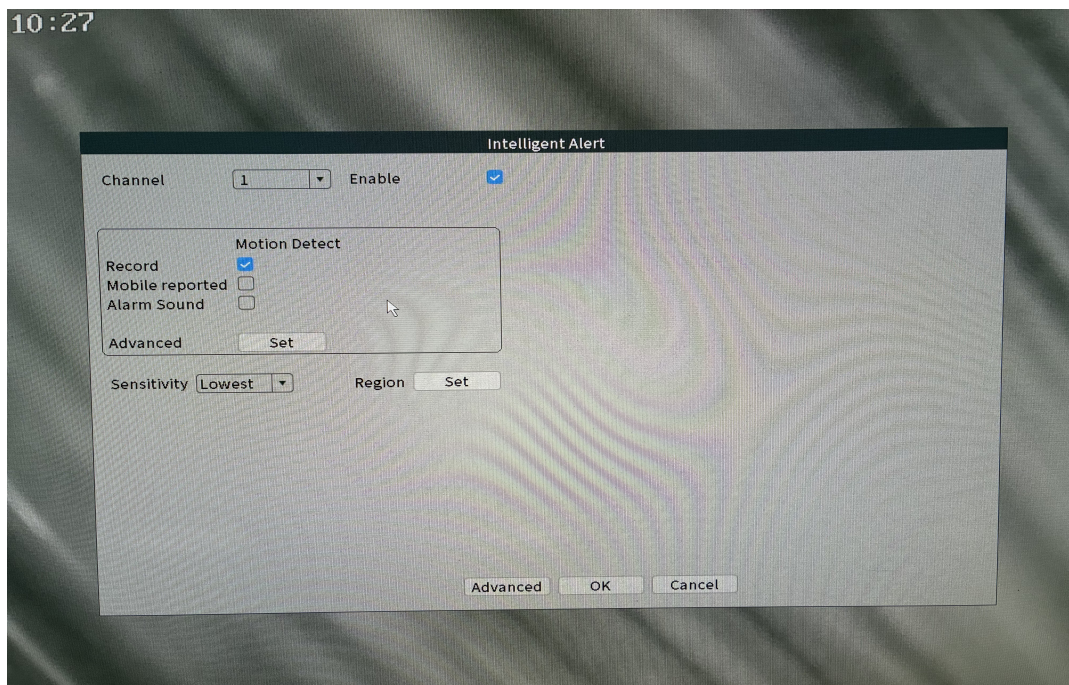

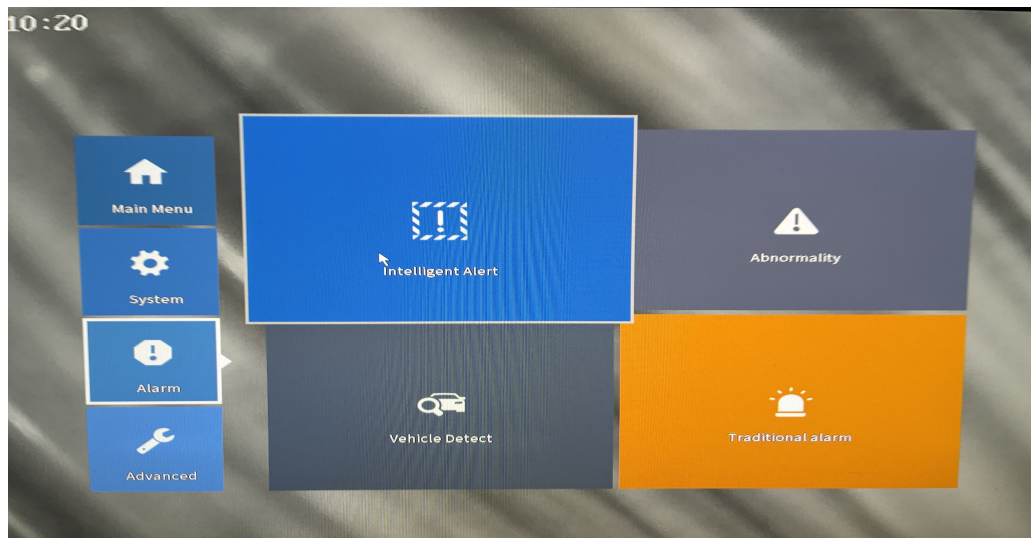

Mode - Schedule

WEEK - ALL

Period 1 00:00 - 24:00 and Check mark **DETECT**

Click **OK**

At the main menu Select ALARM and then INTELLIGENT ALERT

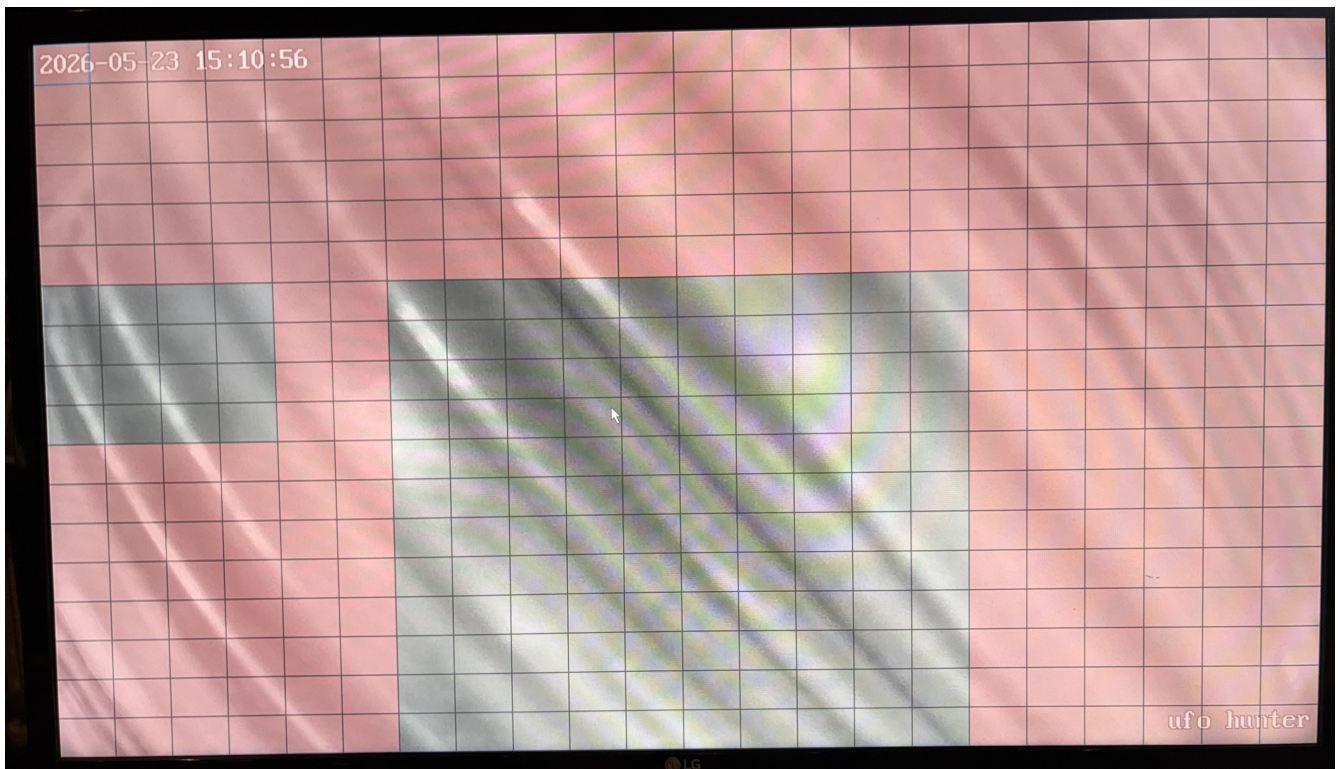

Make sure Channel 1 is enabled

and MOTION DETECT selected to record

Clicking on ADVANCED allows you to experiment with INTERVAL and POST RECORDING TIME

You can experiment with SENSITIVITY

Select REGION and SET allows you to set the camera area that will trigger a recording. This way you can set boundaries that are fixed but move, such as trees or normal aircraft paths, that you want to exclude from triggering a recording

Right click to return to INTELLIGENT ALERT

Click OK

You are now set to capture anything moving above your location. Experimentation is key to optimize your system- eliminating false recordings of birds or planes will enhance your long term goal of recording UFO/UAP.
